

Universal Towing Mirror Special Mounting Hook

MVS has developed a special mounting hook attachment for use on several models of van's, SUV's and trucks. This mounting hook is to be used on vehicles that have extra "deep" or "thick" mirror housings that our other two styles of hooks will not fit. We suggest the wide clip be used for The bottom of your vehicle's mirror.

The special adapter hook comes with a stick-on non-slip pad to be positioned by the user, to best protect the mirror housing and provide a secure non-slip attachment of the hook.

The Universal Towing Mirror hook fits thru the cutout in the special adapter hook as shown. The non-slip pad is then positioned and the hook assembly attached to the mirror housing. The complete UTM assembly is then tightened in place as usual.
