The fourth industrial revolution

Industry 4.0

The digital revolution defines new trends in enterprise development. New standards for business, manufacturing and logistics processes are being introduced. The modern logistic structures develop new technical and technological solutions in order to meet the increasing expectations of customers and consumers.

Logistics 4.0

In the fourth industrial revolution, logistics focuses on integrating companies within open supply chains. The competitive advantage is built on the quality of the logistics services. The automation and robotization of logistics processes is proceeding. IT solutions are evolving in the areas of demand planning, risk management and maintenance.

Choose the intelligent logistics in accordance with Industry 4.0 and the STERLOG philosophy

Safety
Efficiency and
Cost Optimization

The digital evolution of the supply chain requires logistics infrastructure to adapt to:

- Changes in the relevant parameters of the logistics chain
- Volume of material flows
- Development of omnichannel sales
- Pressure on logistics costs
- Changes in the labour market

In their research, **STERLOG** consultants identified that the key component of the Industry 4.0 logistics system is **Intelligent Warehouse 4.0** - a source of verifiable and easily accessible data on supply and demand as well as dynamically responding to market changes.

DO YOU WANT YOUR LOGISTIC TO BE A SOURCE OF COSTS OR PROFITS?

STERLOG

STERLOG is a team of experienced consultants specialized in the design, optimization and modernization of logistics systems.

Our mission is to provide efficient and innovative logistics solutions for the highest possible safety standards in supply chain.

Broad experience acquired during the implementation of projects for trading and manufacturing companies in various industries allows us to effectively realize our mission and offer services at the highest level.

We provide comprehensive services in the design and implementation of solutions that increase the efficiency of logistics processes and reduce the risk in your supply chain.

Deciding on cooperation with **STERLOG** you receive a guarantee of the highest quality of service and the certainty that our solutions will bring immediate benefits in your logistics.

We provide complex logistic services:

- Logistics audit 9A

Assessment of the state of logistics in the company, indication of processes requiring improvement, identification of cost--generating areas and search for hidden reserves.

- Designing logistic systems

Design based on product, distribution, material flows and logistics costs.

- Logistic system reengineering

Optimization of existing logistic resources oriented towards increasing the efficiency and/or cost reduction.

- Quality Rack Service

Complex safety management of the warehouse racking – inspections and maintenance of every manufacturer's racks with the restoration of technical documentation and authorization for utilization.

- Logistic consulting

Support in investment execution and development of logistics - design, budgeting, supervising and execution.

- IT systems for logistics

Definition of company requirements in relations to IT systems for logistics – MES, WMS, TMS, Auto Id, selection of optimal solutions and support in implementation.

- Warehouse equipment

Development of technical specification, supply and assembly of equipment, approval for use and personnel training.
