BATTLECROSS X31 *Intermediate Terrain*

The newest member of the BATTLECROSS X series is here! The BATTLECROSS X31 is for a broader range of intermediate terrain in big bike sizes.* Starting where the X30 left off, the X31 is enhanced with Bunker Groove™ technology which results in greater traction in both harder and softer terrains.* Bunker Groove™ works by improving casing flex which enhances traction in harder terrain and adds biting edges for traction in softer conditions.* Cooling Fins™ keep the feel consistent throughout your moto.

- True intermediate tire with improved traction in a broader range of terrain*
- Rear tire **Cooling Fins™** promote consistent traction and feel under continuous use (such as during a moto) by dispersing heat and minimizing inflation pressure gain
- **Bunker Groove™** technology – Two great benefits!
- Increased casing flex in tread area improves lug contact for greater traction in harder terrain while helping to maintain sidewall stability*
- Provides additional biting edges when lugs are fully embedded in soft terrain*
- Symmetric front tire design enhanced with **Castle Block™** promotes braking stability while increasing biting edges and contact pressure on soft and slippery surfaces*
- Asymmetric rear tire tread design featuring Castle Block™ enhances cornering traction by increasing lateral biting edges*

WHY STICKY RUBBER? - STICKY RUBBER COMPOUND is a slow-rebound rubber for the ultimate in grip and traction control. This rubber acts like a form of suspension that actually grips the cement starting pad and conforms to the trail instead of slipping or bounding. If getting the hole-shot every time is what you're looking for, then STICKY RUBBER is what you want.

BENEFITS OF STICKY RUBBER?

1. Soft and sticky alternative to regular type compound
2. Improved traction especially on hard packed dirt and cement start pods
3. Low temperature/quick warm up feature
4. Suitable for applying ice studs

TPS TIRE BALANCER AND SEALANT

DESCRIPTION	PART #	
MOTORCYCLE FORMULA

12 oz. (12 per case)	650556	24.99
ATV/UTV FORMULA

IMPORTANT NOTICE After installing Ride-On TPS Motorcycle Formula sealant into your tires you may notice a slight vibration until the sealant has warmed up and distributed evenly in your tires. This process usually takes 2 to 5 miles. Please DO NOT attempt to rebalance tires after the installation of Ride-On TPS Motorcycle Formula. Ride-On TPS is a balancing compound. Ride-On TPS will act as a balancer and will result in erroneous readings from a dynamic spin balancer that does not compensate for tire deflection, weight of the bike, brakes, or other suspension components. Ride-On is TPMS friendly, however it is not recommended for use in 2009, 2010, and 2012 Honda Gold Wings as their TPMS Sensors are not hermetically sealed.

BALANCE With one installation of Ride-On, lead weights become a thing of the past. While Ride-On works in conjunction with traditional weights, you won't need them anymore. Ride-On is specially formulated to hydrodynamically balance high-speed tires and dampen road noise and vibrations that cause a rough ride. The great thing is Ride-On will continue to adjust and literally rebalance your tires as you ride for the legal life of the tires. So go ahead, pop off those wheel weights, shine your wheels, and enjoy the smoothest ride you have ever experienced on your bike.

SAFETY FIRST With Ride-On TPS tire sealant, your tire literally fixes itself! If your tire is punctured, the centrifugal force of the rotating tire and the internal air pressure force Ride-On into the hole, sealing it virtually instantly. Since it helps eliminate porosity leaks that cause tires to deflate over time, your tires stay properly inflated, last longer, your bike handles better and gets more miles per gallon.

WORKS IN TUBE AND TUBELESS TIRES Ride-On TPS eliminates 85-95% of flats in tubeless tires from objects up to 1/4" (1/8" for tube tires) that penetrate the contact patch of the tire. Since puncturing objects often tear tubes, Ride-On's efficiency in tube tires is reduced to 55-65%. If the puncturing object remains in the tire, it is vital to remove it as soon as possible to prevent further injury to the tire or tube. Our company takes the position that any repair in a motorcycle tire should be treated as temporary.

DIRT BIKE SERVICE MANUALS

What sets Haynes Manuals apart is the attention to detail that goes into the production of each book. Every manual is written from hands-on experience based on a complete teardown, which is the step-by-step procedure of dismantling a particular vehicle part-by-part. This is followed by the detailed rebuilding of the specific model it documents. Writing each manual takes 30 man-weeks, with authors working as teams to shorten the production time and avoid fatigue during the difficult process. Hundreds of photographs accompany each manual's step-by-step instructions. The books are written from the actual experience of Haynes' own expert personnel using only a basic set of tools and presented in a style that any DIYer can follow, even a beginner. The DIYer can save a great deal of time and money, not to mention feeling proud of the job, by using a Haynes book..

CANYON DANCER BAR HARNESS II

- The cross straps are held farther away from the switch gear
- The "cups" eliminate possible damage to grips
- The new cups hold the cross straps and your tie downs further out on the bars to better clear a wider variety of fairings
- The new cup is even easier and quicker to install correctly
- The cups are sized to fit the fattest grips in the industry
- The steel D-ring "lay-ins" prevent losses even after many years of weather and abuse begin to weaken the Polycarbonate cup
- We are using heavier thread with more stitches in the pattern for greater strength and the contrasting thread color aids in detecting flaws or damage

RATCHETING TIE DOWN WITH WEB CLAMP

Erickson's NEW WEB CLAMP was designed to address the problem of what to do with excess webbing. The WEB CLAMP mechanism is much like a mouse trap, lift the spring loaded clamp and place the folded webbing under the clamp, release the spring loaded WEB CLAMP and you have trapped the excess web. Very simple and effective. SO NEAT!!

SIDE PANELS

Polisport

Polisport's side panels - with heat protection film + washers and rubber grommets.
Polisport's side panels are produced with Polisport's exclusive technology - DGP (durable gloss polypropylene) - for this reason our parts are more durable and have a perfect combination of resistance and flexibility. On top of that, the Polisport replica plastics have a glossy finish and colors that perfectly match the stock parts. These parts also include a heat protection film and the washers and rubber grommets, just like the OEM parts.

AIRBOX COVERS

Polisport's airbox covers are produced with our exclusive technologies - IPD (in-mold plastic decals) and DGP(durable gloss propylene) - the reason our parts are more resistant and durable than the stock ones. The fit is also perfect so that you won't have any trouble with the installation. Colors perfectly matched OEM; the finish is glossy and the colors are bright. If you want OEM quality don't look any further.

CHAIN SLIDERS

Polisport

The Polisport Chain Slider is constructed using thermoplastic polyurethane, allowing it to withstand the friction it receives from the chain. It's not too rigid and not too flexible. Polisport is able to produce an exact replica of the OEM slider at a lower cost. However, this doesn't mean that the quality or strength is any lower, as the chain sliders are durable and long lasting.

POWERMADD

STAR HANDGUARD SYSTEM

Handguards with standard removable air deflector.

SOLD PER PAIR.
MOUNTS SOLD SEPERATELY (SEE BELOW)

The strongest protection you can buy. The Star Series Handguard is designed to take a beating. The mounting brackets are tough aluminum, while the guard itself is made of two different types of plastic - a stiff spine for durability, and a softer colored body for flexibility. Designed to protect your hands from flying debris, rocks, bushes, branches, and mud, plus, keep your hands warmer by blocking the wind in cold weather. In the summer, simply snap out the removable vent cover to let air flow through. In winter, remove the optional extensions for added wind protection. Designed with a universal mount system that works on ATVs, motorcycles and snowmobiles and requires only 1/2" of bar space.

The all new Tri-Mount Kit offers another area to mount the handguards - just below the bend on the rise of the bars. This is an ideal choice when space is limited near the controls, especially on utility quads and some snowmobiles. Easy to mount because there is no need to move controls to make space. Note - works only on 7/8" bars.

In the summer, simply snap out the removable vent cover to let air flow through. The Sentinel Handguard will work with: Sentinel Armor, Gauntlet, Flare, Hand Wrap, Mirror and Large Mirror.

The unique design of these risers allows them to work on virtually any ATV, motorcycle - offroad and street - or snowmobile with 7/8" bars. Risers come with both metric and standard longer mounting bolts. Note - check your cable slack before purchase to determine how high you can raise your bars.

Both widths allow you to use standard 7/8" bars or oversize 1 1/8" bars.

POWERRISER 325

The PowerRiser 325 comes in a 2" rise and will work on most snowmobiles with no cable modification. Check your cable slack for use on ATVs.

Note - One piece OE bar clamps will not work with the PowerRiser 325 - Replacement 7/8" bar clamps are required (PM15470)

FOOT NOTES	
112	Fits stock throttle housing. Use with accessory bar end mounted hand-guards requires drilling out end cap, which will void warranty. Can be used with open end MX hand guards without any modification.
123	Australian Model
117	671094 and 143395 reel diameter is 37mm. The OEM reel size for 2007-2012 RMZ 250 and 2007 RMZ450 is 40 mm, which will make the throttle a little slower and may require free length adjustment on the throttle cable to make sure the throttle can be fully opened.

REV2 THROTTLE KITS

How the Rev2™ Throttle Works

The Rev2™ throttle has several different size reels that will change how much twist is necessary for the throttle to completely open the carbs or throttle bodies on a motorcycle. The larger the reel is, the shorter the twist. Each reel size will shorten the twist by about 10 degrees.

The included cam reel has a progressive profile that allows the throttle to act like a sensitive, long twist throttle during the initial small throttle openings for precise control and then acts like a more aggressive short twist throttle at large throttle openings, progressively shortening the amount of twist needed to reach full throttle.

- The 2nd generation of our innovative reel changing system lets you tailor the throttle rate.
- New ultra compact housing with snap-together elbows make it easy to install and change reels.
- Sleek new design requires less handlebar space for lever clearance and throttle position.
- Use smaller reels for slower throttle rate and larger reels for faster throttle rate.
- Billet aluminum in-line cable adjusters for easy installation and adjustment.

- Lower section of cables use 5 mm housing with PTFE liner for reduced friction, increased routing flexibility and lighter weight
- Upper section of cables use 6 mm housing to provide solid support of adjusters

FOOTNOTES	
146	Rev2 cables can only be used with stock throttle body (or carburetor where applicable) and Rev2 throttle.
142	Off road Rev2 throttle kits require a minimum of 200 mm of handlebar length in order to provide sufficient clearance between Rev2 throttle housing and hydraulic brake lever.

108	Revolver Kits have cables specifically designed for fitment on specific models, but the Revolver throttle itself is not model specific. Therefore, in some situations, the Revolver kit may not be a direct bolt on installation due to space limitations on the stock handlebar. In some installations, it may be necessary to move other control components on the stock handlebar, shorten the Revolver throttle tube and grip, install longer after market handlebars, or possibly all of the above. It is up to the end user to determine the best method for fitment on their motorcycle, and ensure that the Revolver kit is installed properly and with the correct clearances for safe operation. Installation should be done by a qualified mechanic and carefully checked for proper function. Warning: Improper installation could result in great bodily injury or death.
105	01-2679 Revolver throttle kit features throttle cable set 01-1181 that is 3 inches longer than throttle cable 01-1106 included in Revolver throttle kit 01-2619
096	Off road revolver throttle kits require a minimum of 200 mm of handlebar length in order to provide sufficient clearance between Revolver throttle housing and hydraulic brake lever

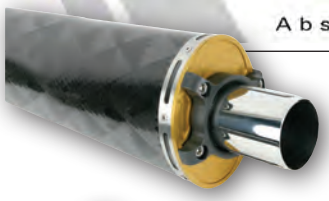
Two Brothers Racing U.S.A. Absolute Top Level

M-7 OFFROAD EXHAUST CANISTERS



Our M-7 V.A.L.E.™ exhaust systems feature our exclusive Teflon coated, blunted, cast magnesium outlet and our exclusive X-Lite™ retaining ring. These exclusive Two Brother Racing features not only look great, but also significantly reduce the weight of the exhaust system. The V.A.L.E.™ inlet design eliminates the use of springs and creates an adjustable mount that is rock solid when fixed in place. The system also features a precision mandrel bent, thinwall s-bend tube, and for a full system, a header pipe custom fit for each model.

The P4 PowerTip™ was developed to fill the gap between the P1 and P1-X sound reducing tips. The P4 is more restrictive than our P1-X but quieter than the P1, reducing sound output between 5-6 dB on most pipes. Power loss is minimal. Not recommended for use with a spark arrestor screen.

Easy to install - simply unbolt your existing M series endcap, drop in the P1 and reassemble.
Note: The P1 is only intended for use with our M series outlets.

PISTONS WITH AN ATTITUDE.

NAMURA® TECHNOLOGIES INC

AVAILABLE FOR MX, ATV/UTV AND PWC APPLICATIONS

AS THE HEART AND SOUL OF NAMURA TECHNOLOGIES, NAMURA PISTON KITS ARE DESIGNED AND PRODUCED WITH TODAYS MOST ADVANCED TECHNOLOGIES AND RIGOROUS PROTOCOLS.

Namura offers direct replacements pistons for MX/ATV/PWC original equipment as well as hi-compression, and a variety of oversizes to meet your ride's needs. They are available in 0.25mm increments, from the -1 (0.25mm) though the -8 (2mm) oversize. We also carry B (0.01mm) and C (0.02mm) oversizes which help extend the life of your expensive coated cylinders. There is a selection of big bore piston kits available for some applications.

ALL NAMURA PISTONS KITS COME STANDARD WITH:

MACHINED SMOOTH HEADS

Reflects combustion heat and reduces carbon buildup, protecting the top of the piston. Some tests have shown this feature can increase horsepower and fuel economy by up to 6%.

MOS2 (TEFLON/MOLYBDENUM) COATED SKIRTS

A rolled-on application process provides a bond that is 10 times stronger then other spray on coatings. Benefits include increased heat transfer, reduced friction, and helping to eliminate seizures.

ANODIZED DOMES

Increases heat resistance and durability; pistons with anodized domes are 75% stronger than non-anodized pistons.

NAMURA FORGED-ALLOY

DEVELOPED BY NASA-EXCLUSIVELY USED BY NAMURA

Namura Technologies has always taken pride in providing our customers with the highest quality product possible and now we've stepped it up again with a revolutionary new line of Forged pistons.

Namura Forged pistons are manufactured from proprietary aluminum alloy that only Namura has access to in the aftermarket. After hours and hours of research, engine rebuilds and dyno tests we are more than confident to say Namura Forged pistons will outperform and outlast competitors using the industry standard 4032 alloy.

MATERIAL PROPERTIES

MEASURED IN ROOM TEMPERATURE

NAMURA FORGED VS. STANDARD 4032	NAMURA FORGED	STD 4032
TENSILE STRENGTH *(KG/MM2)*	33.9	33.4
YIELD STRENGTH *(KG/MM2)*	27.2	27
ELONGATION *(%)*	6.0	5.2

VS

MEASURED AFTER SOAKING 100HRS AT HIGH TEMPERATURE (350°C/662°F)

NAMURA FORGED VS. STANDARD 4032	NAMURA FORGED	STD 4032
TENSILE STRENGTH *(KG/MM2)*	13.4	4.4
YIELD STRENGTH *(KG/MM2)*	10.9	3.1
ELONGATION *(%)*	3.5	-

Comparing the two materials side by side, they both have very similar elongation (%), Yield Strength (kg/mm2), and Tensile Strength (kg/mm2) at room temperature. However, as the aluminum heats up to conditions typical in a combustion engine, Namura's exclusive alloy actually surpasses and proves to have twice the tensile strength and harness of traditional 4032!

CONNECTING ROD KITS
Kit includes connecting rod, wrist pin, top & bottom bearings, and washers (where necessary). Forged from premium chromoly steel with double honing on top and bottom bearing holes for smooth operation and longer bearing life.

GASKET KITS
Produced using performance materials to increase durability and provide greater reliability, our gasket kits are offered in both top end and complete gasket kits. Clutch gaskets are available for some applications.

PISTON KITS
Namura piston kits come with the piston individually wrapped; a set of OEM quality rings packed in their own box, a wrist pin, and circlips.

TOP END REPAIR KITS
These include everything you need to get you operational again; they come with pistons, a top end gasket kit and bearings where needed.

PISTON KITS

PROX pistons are precision machined on the latest, state of the art CNC equipment. The same low-expansion, low-friction piston alloy is used as is used for all major Japanese engine manufacturers. PROX Piston Kits are a first class solution to replace the original piston in your Motorcycle, Scooter, Moped, ATV, Personal Watercraft, etc. PROX Piston Kits for sleeved cylinders are available in standard size and a wide range of over-sizes. The availability of oversizes up to 2mm significantly helps to increase the lifespan of a cylinder by offering more re-boring possibilities. PROX pistons for plated cylinders come in standard size, as well as in A, B, C, D+ oversizes. Take advantage of the additional oversizes to extend the lifespan of plated cylinders. All PROX Piston Kits are supplied complete with Piston Rings, Wrist Pin and Circlips, ready to install!

CONNECTING RODS

PROX Connecting Rod Kits are made out of the toughest alloys available today. O.E. specifications and tolerances are meticulously maintained, a guarantee for easy installation and trouble free performance. PROX Connecting Rod Kits come complete with Crankpin, Big-End Bearing, Small End Bearing and Washers.

GASKET KITS

Precision engineering and the use of first class materials guarantee that they meet or exceed O.E. standards.

FORGED POWERSPORTS PISTONS

Powersports Forged Piston Advantage

Wiseco leads the performance aftermarket by producing the highest quality forged pistons for Dirt Bikes, ATV's, Snowmobiles, Outboard Marine, and Motorcycles right here in the USA. Wiseco is unique because we forge all of our own pistons in house, and produce all of our own forge tooling right here in the USA. This allows us to control all aspects of our manufacturing process from raw bar to skirt coating finished parts.

In addition, in-house dyno testing gives Wiseco the ability to develop state-of-the-art technology such as new shapes, coatings, and components, and lead the industry through rigorous R&D. Linking all segments of Wiseco's organization through design, testing, manufacturing, and distribution allows us to fulfill market needs with minimum lead-times.

Piston Engineering / ArmorGlide Coating

Some of our forged pistons offer our new ArmorGlide™ skirt coating, which is the result of testing, development, and benchmarking through Wiseco's rigorous in-house dyno program. The outcome is the ultimate in skirt coating toughness, lubrication, and bond technology working together to minimize friction, maximize horsepower, and provide improved wear resistance. Not only is ArmorGlide™ a high-tech lubricant that reduces friction, but it also allows the piston to be fitted tighter within the bore allowing a better ring seal and reduced noise from piston rock.

Top End Piston Kits

Wiseco's complete top end Piston Kits are offered for nearly every popular application in the powersports market. These kits contain everything you need to complete your rebuild the right way, the first time. High quality parts specifically chosen by us to match our forged pistons are included in this kit for easy one stop shopping.

- 4-stroke kits feature a 'race-ready' dome finish with smooth edges for improved combustion flow
- Horizontal slot-pin oiling reduces friction and provides scuff resistance, along with a pressure seal groove for maximum ring seal
- Most PK/SK/WK/VT kits from Wiseco feature a complete top end gasket kit that gives you everything you need to complete your rebuild from premium materials
- 4-stroke race applications feature Wiseco's ArmorGlide™ skirt coating to provide reduced friction and noise to contribute to increased horsepower
- Dedicated forgings used for superior strength to weight ratio utilizing aerospace alloy
- High Performance ring kit and alloy pin included with each piston kit for extended life and sustained power

REPLACEMENT RINGS

Some Wiseco 4-Cycle ATV pistons have been manufactured with more than one ring type. The correct replacement ring style is stamped on the dome of the piston. EXAMPLE: 4419PS will be stamped with either a "C" or a "G" to indicate the correct replacement ring style to order.
ONLY WISECO REPLACEMENT RING SETS CAN BE USED ON WISECO PISTONS.

2-CYCLE RINGS - MOTORCYCLE & ATV

All Wiseco 2-Cycle pistons are supplied with rings and circlips. Only Wiseco replacement ring sets can be used on Wiseco pistons. The replacement ring type and bore size (in millimeters) is stamped on the dome of the piston. Refer to this information to reorder correct replacement rings. Ring styles cannot be interchanged.

GARAGE BUDDY & WISECO BOTTOM END REBUILD KITS

FORGED BOTTOM END **ADVANTAGE**

The foundation of any bottom end rebuild is a solid forged crankshaft assembly, which provides strength and reliability far surpassing any cast part that lacks consistency. Forged crankshafts due to their lighter weight, more compact dimensions and better inherent dampening, rev higher and run smoother than their cast counterparts.

This part of the engine has a huge amount of stress due to twisting and bending 1000's of times a minute while running under load, you don't want an inferior product here to ruin a motor. Wiseco engineers have designed our crankshafts to meet or often exceed OEM tolerances giving you the best base for your bottom end.

CRANKSHAFTS / CONNECTING RODS

Wiseco powersports crankshafts feature a double forged connecting rod made from dedicated forgings. The rods maintain superior strength, durability, and dimensional consistency through improved grain flow. Shot peening eliminates residual stress and oil slots are located to maximize lower rod oiling and extend bearing life.

Coated bronze thrust washers have a dimpled design to increase oil retention and reduces stress between the connecting rod, washer, and crank web. Double-drilled small ends provide the piston pin with extra lubrication and cooling, reducing distortion of top end due to thermal transfer from the piston.

Wiseco has designed these crankshafts and connecting rods to work together with our pistons to provide the smoothest rotating assembly possible. Having a complete bottom end that is made of 100% forged material will give you the piece of mind that your motor will be able to withstand any abuse within reason.

Professional racers as well as weekend riders choose these solid kits to reduce failure rates and take advantage of the horsepower and immediate torque a light weight bottom end can deliver.

BOTTOM END KIT FEATURES

- Each kit contains everything you need to complete your rebuild the right way, the first time- crankshaft and connecting rod, all applicable bearings, and complete bottom end gasket kit made to meet or exceed OEM
- Wiseco connecting rods are double forged from a dedicated forging and feature shot peening, oil slots, and coated bronze thrust washers
- Bottom end gasket kits are made from premium materials, exceeding OEM standards, to provide exceptional seal between critical mating surfaces
- Main bearings are manufactured to the highest quality standards. Each is case hardened for maximum life and smooth operation at high RPM's
- Corrosion resistant surface treatment to prevent corrosion and pitting over long term use or storage. This will add to the life as well the strength of the assembly
- Top end of rod is bushed for oil retention and eliminates pin galling. The bottom end rod bores are case hardened to 58-62 RC to optimize bearing running surface
- The crank pin bearings are manufactured from the highest quality, hot rolled steel case hardened to 58-62 RC to extend the lifetime of the assembly
- Caged needle roller bearings to provide the highest possible RPM
