NAMURA TECHNOLOGIES INC

PSYCHIC CYLINDERS & CYLINDER KITS

Psychic cylinders are brand new, never rebuilt, and designed strictly off of OEM specifications.

Available from standard to +4mm big bore upgrades
Cast aluminum with Nikasil coating for advanced wear protection.

COMPLETE CYLINDER KITS
Psychic cylinder kits come packaged with a Psychic cylinder and Namura Technologies piston and top-end gasket sets. The piston and gasket sets are direct OE-spec replacements.

- Pistons feature MOS2 coated skirts for improved break-in and reduced friction
- Piston heads are machined smooth for better flow rates and reduced carbon build up, and finished with a hard anodizing process for increased durability
- Piston kit includes piston, wrist pin, circlips and ring set
- Top-end gasket sets ship with MLS head gasket (most models), base gasket, exhaust gasket, intake/carb gasket and all associated o-rings and valve stem seals (4-stroke models only)
- All gaskets are asbestos-free and are engineered to withstand temperatures in excess of 300° F

VALVE GUIDES

We choose to use the copper based C63000 nickel-aluminum bronze as a material to make our bronze valve guides because of its ideal characteristics for the application. The 5% nickel content provides superior resistance to wear, and the approximately 80 percent copper content delivers outstanding heat conductivity. KPMI® guide profiles are designed to have minimal effect on the airstream while maintaining critical cross sectional thickness in high temperature areas, which promotes high performance and endurance.

BLACK DIAMOND VALVES

All KPMI® Black Diamond™ Stainless steel valves are impregnated by a special German process to a depth of .002, with a surface build up of .0002. This Black Diamond process improves wear properties, reduces friction, and provides resistance to corrosion and wear that is superior to chrome and nickel electrolysis plating. Each valve is designed using Finite Element Analysis software, and profiles are tested on our computerized flow bench. Black Diamond™ Valves are lightweight, strong, one piece forgings with profiles that provide excellent flow characteristics.

PRO X ENGINE VALVES

PROX Valves are made in Europe to high quality standards. By using a forged one-piece titanium alloy with several integrated material micro structures, specific and different material properties are created in area's where needed. The high tech Ti3Al alloy has also very good material properties at high temperatures. The special coating creates considerably lower friction between the valve and other parts like valve guides. Therefore the PROX valves exceed OE specifications in dimensions and reliability.

psychic® MX COMPONENTS

VALVES

OEM Replacement Valves – are manufactured to OEM specifications from SUH3HT Steel for added corrosion and oxidization resistance.
Performance Valves – feature a forged one-piece construction, nitride coating, modified radius, swirl polish, chromed stems, and stellite tips. This provides reduced friction for quicker/higher revs and a longer valve life.

Springs
Psychic springs are made from an ultra high strength alloy. They are machined to precise specifications before being heat treated to increase strength and durability.

Valve Shims
Psychic Shim Kits include 3pcs of every size, with the thickness increasing in increments of 0.05mm. The shims are made from SCM415 Chromoly Steel, with each kit packaged in an organized case and sizes clearly identified for easy use. Individual refills are available in bags of 3.

CAM SHAFT INSTALLATION KITS

Hot Cams installation kits help with the process of keeping an eye on your camshaft centerlines. The accurate measuring tools in these kits will get you dialed-in for better performance. Each of the Hot Cams kits includes a degree wheel, dial indicator, adjustable magnetic stand, and three positive stops (10mm, 12mm, and 14mm threads), plus a great wooden carrying case to keep everything in. Centerline placement relative to TDC affects how your camshaft will perform and operate.

HOT RODS CRANKSHAFTS

Hot Rods crankshafts are regarded as the premier alternative to costly manufacturer cranks. But, in addition to being a cost effective alternative, Hot Rods crankshafts also bring a level of uncompromising quality, design and innovation not seen in its competitors. One such innovation would be the Hot Rods line of drop-in stroker crankshafts. Not only do these stroker cranks bring about a heightened level of performance, but do so without costly case machining, custom cam chains and spacer plates. Better yet, many Hot Rods stroker cranks even utilize the engine's stock piston.

HEAVY DUTY DROP-IN STROKER CRANKSHAFTS

In addition to Hot Rods heavy duty OEM replacement crankshafts, Hot Rods also offers a full line of drop-in stroker crankshafts. Not only do these stroker cranks bring about a heightened level of performance and increased displacement, but do so without costly case machining, custom cam chains or spacer plates. Better yet, many Hot Rods stroker cranks even utilize the engine's stock piston.

THE ORIGINAL HOT RODS™ CRANKS AND RODS

Connecting rod kit sold complete with rod, crank pin, crank pin bearing, top end bearing, and thrust washers (where applicable). Rebuilds Hot Rods and OEM crankshafts.
Made in the U.S.A.!

HOT RODS CONNECTING ROD KITS

Hot Rods has continued to be, not only "The Original" aftermarket replacement rod, but the best aftermarket replacement rod. All of our rods are created from 8620 case hardened steel. But, in addition to that, our rods also undergo a process of double forging which helps to improve grain flow as well as dimensional consistency — and that means a rod of uncompromising strength. To improve fatigue durability, all of our rods are also shot peened. This process, utilizing a stainless steel shot, helps to remove stress risers and creates more smoothly blended radiuses.

The Factory Effex Engine Hose Kits are made with style and improved functionality. Designed with an exclusive blend of reinforced, woven Thermoplastic and Pure Silicone materials to form the highest quality engine hoses. This improves water flow and can withstand temperatures of up to 420 degrees. We integrated a unique inner liner made from an HDPE coating, that improves and increases the flow of liquids, which offers improved cooling for your race bike.

We have also created "Y" type kits that eliminate the plastic fitting found on most late model motocross engines that can melt under extreme heat, which can cause engine failure.

Available in a multitude of colors to give your bike that factory look along with factory function.

- Woven Thermoplastic / Silicone outer shell
- HDPE inner liner for improved water flow and cooling
- Vibrant factory colors
- Y- kits that eliminates the plastic fitting that can melt in extreme conditions
- Perfect fitment with easy installation
- Reduced weight
- Improves engine cooling

Why Hiflo?

Providing unbeatable performance and exceptional value, Hiflofiltro is the best-selling brand of aftermarket filters for motorcycles, scooters, and ATVs worldwide. The filters are also supplied to original equipment manufacturers as well as private label brands.

• MATERIALS

To achieve our quality aims and to ensure the consistency of our products, we use only premium materials from well known manufacturers: steel from Toyota Tsusho and NKK Japan, glue from Henkel Germany, filter paper from Ahlstrom Filtration Finland, Hollingsworth & Vose USA and Awa Paper Japan.

• PRODUCTION

The Hiflofiltro-Thai Yang Kitpaisan factory was founded in 1955 and has been manufacturing filters for the OEM motor industry since 1963. With the experience of more than four decades, continuous research and development and modern production facilities, we manufacture some of the best quality filters in the world.

• QUALITY CONTROL

Every oil filter goes through 16 individual quality control checks before it is ready to leave the factory. The whole manufacturing process, including the checking of raw materials, individual filter testing, is regularly audited and verified independently by TÜV SÜD.

FILTER CHARGER OIL

Specially formulated to work in combination with the cotton fabric in K&N Filtercharger elements providing a superior air filtration system. When used as directed, it quickly penetrates the filter pleats, where it remains suspended in the cotton fabric. Saturation is maintained until the element is cleaned with K&N Air Filter Cleaner.

TWIN AIR DIRT BIKE FILTERS

Twin Air filters are designed to increase air volume around the filter to improve airflow into the intake. More air means more power for your engine. Flow bench tests have proven that Twin Air filters provide increased airflow while reducing the filters tendency to clog. You won't have to worry about your filter falling apart, because all Twin Air filters are constructed using an exclusively formulated adhesive that is unaffected by repeated cleanings. Twin Air filters are the choice of champions because they provide more power and longer life for every high performance engine.

ORIGINAL FOAM AIR FILTER

Designed for your bike (no "universal fits" at Twin Air – we have molds for 1500+ different model motorcycles dating back to 1965)

- Washable and Reusable (reusing a Twin Air filter 30 times is common)
- Dual-layer foam made to our specifications, with cells that are evenly sized and distributed
- Minimized seams made possible by a revolutionary micro-gluing process
- Greaseless sealing ring
- Assembled by hand and inspected for a perfect fit
- Packaged in a resealable and reusable bag
- Some applications have a flame-retardant foam layer laminated to the filter that eliminates the restrictive, stock backfire screen

BIO FOAM AIR FILTER

For many years, Twin Air Factory Pre-Oiled filters were only available to our top professional race teams and OEM customers. The results were so good that in 2005 we made them available to everyone.

The same features as the Original filter, with the added convenience of wash-down-the-drain cleaning. A Dual-Stage Air Filter is submerged in BIO Liquid Power Filter Oil, massaged to ensure all pores are evenly coated, and placed in a temperature-controlled room to allow the oil to completely cure. You just open the resealable bag and install.

POWER FLOW KITS

The best filter in the world can't do its job if there are leaks in the seal of the airbox. Twin Air's PowerFlow Kits ensure a leak-proof, fool-proof fit with a rigid, lightweight aluminum cage that replaces your flimsy, plastic stock cage and, when needed, a billet-aluminum flange that bolts tight to your airbox.

PowerFlow Kits are custom-designed to each unique application for superior airflow, improved sealing surface, removal of the restrictive backfire screen, and ease of service.

All Kits include a BIO Factory Pre-Oiled Air Filter. Replacements are available separately.

TWIN AIR DIRT BIKE FUEL FILTERS

Twin Air fuel filters protect against dirt or debris that can get into your fuel system and cause serious damage - and they're fast & easy to install:

- Unscrew the gas cap
- Drop the 40-micron monofilament screen into the tank and gently press the material down
- A plastic ring sits on the gas filler lip and locks in place once the gas cap is tightened
- To clean, remove the filter out and turn it inside out. Use an air hose to gently blow the dirt particles out of the filter

BOYESEN DIRT BIKE PRO SERIES REEDS

Q: What advantage do Pro Series Reeds have over Power Reeds?
A: Pro Series dual-stage reeds combine a carbon-fiber top reed with a fiberglass bottom reed for unrivaled performance. The Pro Series Reeds are more responsive than our traditional Power Reeds. The carbon-fiber top reed has excellent response characteristics that provide even quicker acceleration, stronger throttle response, and more over-rev than our standard Power Reeds. The fiberglass bottom reed provides stability and longer reed life.

V-FORCE 4 REEDS

The all-new VForce4 is built upon the solid foundation that has made the VForce3 such a success for the last 10 years. While the VForce3 has been continually refined over the years, this is a complete redesign of the entire system. We jokingly say, "The only thing we didn't change is the bolt pattern." However this is actually quite true. All the components that go into making a VForce reed valve system have been significantly changed since the VForce3.

The TMX features a flat slide design in a smooth bore Venturi to provide improved throttle response and wider powerband. The float system with independently moving floats, working with a main jet enclosed in a baffle chamber, allows the TMX to perform smoothly without hesitation on the roughest terrain. TMX Series Carburetors are available in 35mm bore sizes for 125cc race engines, and in 38mm bore sizes for use in 250cc race engines.

Mikuni TMX Series Carburetors are intended for off-road riding and racing use only. Not legal for sale or use in California or other locations where similar pollution laws may apply.

POWER JET KIT

Power Jet Kits are used in two-stroke engine applications to improve midrange throttle response and add additional fuel to wide open throttle running conditions, especially with snowmobile clutches. Kits may be installed easily on Mikuni TM and VM Series carburetors.

The Jet Needle controls the fuel mixture in the mid-range 1/4-3/4 throttle position. The taper of the needle determines the amount of the fuel. For example: the thinner the diameter of the needle, the more fuel will be drawn. The thicker the diameter of the needle, the less fuel can be drawn.

CARBURETOR PARTS & ACCESSORIES

MIKUNI NEEDLE JET • PRIMARY TYPE

The needle jet is the main fuel passage to the main bore of the Mikuni carburetor. Depending on the inside diameter of a specific needle jet, this will also affect the function of the needle. Therefore, needle jets and needles act together as the main system in controlling the amount and mixture of the fuel which is drawn in mid-range 1/4-3/4 throttle operation.

MIKUNI

CARBURETOR PARTS & ACCESSORIES

MIKUNI NEEDLE JET • BLEEDER TYPE

The needle jet is the main fuel passage to the main bore of the Mikuni carburetor. Depending on the inside diameter of a specific needle jet, this will also affect the function of the needle. Therefore, needle jets and needles act together as the main system in controlling the amount and mixture of the fuel which is drawn in mid-range 1/4-3/4 throttle operation.

K&L AIR CUT OFF VALVES

Here's an inexpensive alternative to the costly OEM assembly. To prevent "afterburn" generated by a lean fuel mixture when closing the throttle, the air cut-off valve temporarily closes the slow-jet air passage, creating an instantly richer mixture. Included in these high quality kits are all parts necessary for a complete rebuild (diaphragm, spring and o-ring). Made in Japan.

MR. FUNNEL

FLO TOOL

REMOVES WATER FROM FUEL

The Fuel Filter Funnel by Mr. Funnel is a heavy-duty, anti-static, and fast flow funnel with built-in filter technology. When fuel is poured through the Fuel Filter Funnel, water and debris will not pass through the filter's fluoropolymer-coated stainless steel filter. Only filtered fuel flows through to your engine, improving its efficiency, durability, and proper operation. The sump area collects the deflected water and debris for proper disposal. The Fuel Filter Funnel by Mr. Funnel will filter gasoline, diesel, heating oil, kerosene and 2-cycle mixed gas.

What Model Do I Need?

The Mr. Funnel Fuel Filter comes in four different fast-flow models (See below). Models differ mainly on flow rate. If your need is to transfer five gallons or less of fuel, then the F1 and F3 are for you. If you are transferring more then 5 gallons, then the F8 and F15 are right for you. Our F15 is our fastest flow model at up to 15 gallons per minute! This model can also be used at a fuel pump. Get your Mr. Funnel Fuel Filter today, and keep your engine running smooth!

YUASA BATTERY

MAINTENANCE FREE

YUASA BATTERIES CONTINUED

Absorbed Glass Mat (AGM) Technology is an advanced battery design used in Yuasa's Maintenance Free Batteries that eliminates water loss. Once it's filled with acid the battery is permanently sealed - so you'll never need to fill it with water or check the acid level.

Long Life

Because of its lead calcium design, the AGM battery will hold its specific gravity more than three times longer than conventional lead antimony types. This means much longer periods between charges when the battery is used in a standby mode, like winter storage.
And to remain factory-fresh the AGM battery is shipped dry along with its own pack of high-gravity acid that's added at the time of installation.

Sealed, Non-spillable

Once filled with acid from its special packs, the AGM battery is virtually maintenance free. It's totally sealed and all of the acid is absorbed in the special plates and separators, so there is no need to worry about acid leaks on valuable vehicle parts and accessories.

Selected types also available in Factory Activated

(filled, sealed and charged at the factory).

YUASA BATTERY

YUMICRON CX

YUASA BATTERIES CONTINUED

The YuMicron CX was the first small engine starting battery to use "lead calcium" technology. This special technology means the YuMicron CX generates more power, requires less maintenance, and lasts longer than any other conventional battery.

More Power
Because of it's unique design, the CX will generate 5% to 8% more cold cranking amperage than our own high-output YuMicron lead-antimony battery. For high compression machines, this means greater reserve capacity and more starting power.

Less Maintenance
The YuMicron CX lead calcium technology also reduces water loss, so the CX requires servicing (water filling) only about one-eighth as often as ordinary lead-antimony types.

Longer Life
The YuMicron CX holds it's specific gravity more than three times as long as lead-antimony type batteries resulting in a longer shelf life. This feature means longer periods between charges, especially during winter months.

TYTANEUM BATTERIES

Tough. Reliable. Whether you ride daily, seasonally, or just on weekends, you'll get more enjoyment out of your motorcycle, ATV, PWC or snowmobile with a TYTANEUM battery. Our batteries perform reliably during off-road, over water and cold weather use, and keep their charge even after months of storage. Available in traditional flooded or the new sealed AGH designs, TYTANEUM batteries are built to withstand punishing vibration, salt spray, gas and oil, and protect against equipment-damaging spills, corrosion and seepage. And because nothing ruins a weekend faster than a dead battery, we use advanced designs and manufacturing techniques to shorten current paths and reduce resistance, giving you higher cranking power and maximum battery life.

MAINTENANCE FREE HIGH PERFORMANCE

SEALED MAINTENANCE FREE

Once these batteries are put into service, they become a completely sealed unit requiring a lot less maintenance than Conventional Batteries. Although the battery still needs to be charged on a regular basis if your vehicle is not in use, there is no need to monitor the fluid level in this battery type. Unlike the Conventional Battery, once this type battery is sealed, it becomes spill proof, which can eliminate damage from battery acid that can occur from using a flooded battery.

FACTORY ACTIVATED MAINTENANCE FREE

The same convenience and technology as the Sealed Maintenance Free Batteries mentioned above, except this battery is sealed and activated at the time of manufacture. Very convenient to the point that all that needs to be done is put the battery into your vehicle and you are ready to ride. The only downside of this type of battery is that all batteries once activated have a shelf life, and if this battery is not going to be used right away, or be put in a vehicle that is not going to ridden on a regular basis, the battery will need to be kept charged on a battery maintainer.

TYTANEUM BATTERIES CONTINUED

Tough. Reliable. Whether you ride daily, seasonally, or just on weekends, you'll get more enjoyment out of your motorcycle, ATV, PWC or snowmobile with a TYTANEUM battery. Our batteries perform reliably during off-road, over water and cold weather use, and keep their charge even after months of storage. Available in traditional flooded or the new sealed AGH designs, TYTANEUM batteries are built to withstand punishing vibration, salt spray, gas and oil, and protect against equipment-damaging spills, corrosion and seepage. And because nothing ruins a weekend faster than a dead battery, we use advanced designs and manufacturing techniques to shorten current paths and reduce resistance, giving you higher cranking power and maximum battery life.

MAINTENANCE FREE

SEALED MAINTENANCE FREE

Once these batteries are put into service, they become a completely sealed unit requiring a lot less maintenance than Conventional Batteries. Although the battery still needs to be charged on a regular basis if your vehicle is not in use, there is no need to monitor the fluid level in this battery type. Unlike the Conventional Battery, once this type battery is sealed, it becomes spill proof, which can eliminate damage from battery acid that can occur from using a flooded battery.

FACTORY ACTIVATED MAINTENANCE FREE

CONVENTIONAL

This type of batteries has flooded electrolyte and is very accessible. These batteries have to be carefully and periodically maintained. The conventional batteries are normally less expensive than the other types mentioned, but with the cost savings come more maintenance. You will need to add distilled water from time to time to prevent the battery from sulfating. Water loss is a normal characteristic of this type of battery because of the high temperature inside, and the process of electrolysis and evaporation. This means the fluid level of the battery needs to be checked on a regular basis. Conventional batteries also tend to discharge more rapidly than AGM type batteries.

MAGIC POWER BOX

A New Concept of Power!

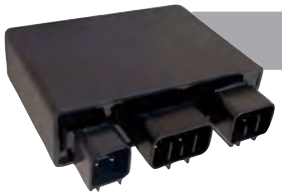
773-400
99.00

Compatible with any ATV, Motorcycle, Watercraft or Snowmobile with an electric start!

The Concept:
When you throttle up your machines, the battery output voltage is unstable; it changes between 11V and 15V, the spark energy is inconsistent and your machine lacks power.

With the Magic Power Box the output voltage will be almost 100% stable. Your machine can reach the maximum power.

• Increase Horse Power • Increase Torque • Quicker Throttle Response
• Increase Spark Energy • Improve Fuel Efficiency • Easier Start & Runs Cleaner
• Less Spark Fouling • Brighter Headlights • Longer Battery Life • Reduce the Radio Noise



CDI BOXES

• High Performance • • Faster Than Ever •

How It Works?
1. We have built in the best ADVANCED timing curves ready to plug in and go.
2. Increased additional 1,000+ RPMs over stock CDI.
3. Stronger spark energy for easier start

RECTIFIER

Improved Rectifier / Regulator
Increases Horsepower up to 8%

How does the re-designed Rectifier increase horse-power?

We built an extra sensor and switch in the unit. When the battery is near fully charged, the sensor instructs the Magneto Rotor to run without cutting the magnet field. The rotor then runs lighter and saves the power to the engine. The engine gains more horsepower to drive your machine faster!

STATORS

Procom manufactures stators on a modern stator core with the highest grade copper wire for the various windings. All winding is done on computer controlled winding machines to achieve absolutely perfect winding quality which is especially critical for the ignition source coil on this stator.

We install very high grade lead wires, connectors and seals and have developed an insulation coating process that is the very best. The result is a stator that is superior to the OEM stator in reliability and performance.

All stators manufactured by Procom comes with a full one year warranty.

HALOGEN HEADLAMP BULBS

ALL WEATHER
(AW) These bulbs are designed for rain, fog and snow and are just as bright as standard halogens. The all weather dichroic coating keeps the glare down from the elements.

ALL WEATHER BLUE
(AWB) Same advantages as the all weather, plus the blue coating is more noticeable to oncoming traffic. Note: The coating does decrease the light output slightly.

GOLD
(G) The biggest advantage is its ability to be seen by oncoming traffic.

XENON BOOSTED
(XPB) Best performing lamp on clear nights, the xenon gas increases the light output to compensate for the special vycor blue coating. These combinations bring the light as close to daylight as possible.

DIRTBIKE

CLUTCHES DESIGNED FOR DURABILITY ON TOUGH TERRAIN

Replacing just the "Apparently" worn plate or plates may not even get close to rebuilding your clutch to its original stack height and all you get is clutch slip and the job has to be done again. Compare that to the guaranteed results of the EBC Dirt bike and ATV clutches and clutch kits.

Complete stack height controlled set of friction plates using
- EBC unique alloy article impregnated clutch facings that wear longer and resists burning plus ...
- Pin planished steel driven plates that spread the oil around the clutch better and prevent more clutch burn-up than ever before!
- 10-15% uprated heavy duty clutch springs to clamp those plates together firm and strong for the life of your clutch.
