INSTALL NOTES:

- DRILLING REQUIRED
- FASCIA TRIMMING REQUIRED

INSTALLATION STEPS

1. Remove the spare tire from the tire well. Remove the (9) screws at bumper bottom holding rear bumper fascia in place.
2. With hitch ball mount in place, position hitch on vehicle centered and squared with the car. Check for sufficient hitch ball/bumper clearance. Trim fascia material where hitch bumper bracket meets bumper; bracket must mount directly to steel bumper beam.
3. Using the hitch as your template, drill (2) holes into the tire well and (2) holes into the bumper beam.
4. **FOR MODELS 1983-87:** Fishwire and install the fasteners into bumper beam at existing access holes in the bottom of the beam just outward from attachment holes.

   FOR MODELS 1988-92: Bumpers have no access holes. Fishwire and install hardware through openings at each end of bumper beam. Fascia molding can be loosened for additional clearance.
5. Position hitch on car being careful not to push carriage bolts out of place. Install hardware as shown.
6. Torque all hardware to 70 ft-lbs.

PERIODICALLY CHECK THIS RECEIVER HITCH TO ENSURE THAT ALL FASTENERS ARE TIGHT AND THAT ALL STRUCTURAL COMPONENTS ARE SOUND.
