SKYHALL® Fence
We Make Fence Ideal~

SAND BASTION

Get Exceptional Protection and Stability From Sand Bastions to Fight Against Attacks.

PRODUCT DETAIL

Features & Benefits

Brief Introduction

Our sand bastions are made from low carbon steel wire or high tensile steel wire. With a welding strength greater than 75%, they deliver exceptional protection and stability against a range of attacks. The surface is pre hot dipped galvanized to fight against the harsh environment in military sites.

High tensile strength non-woven fabric is embedded in the inner side of the sand bastion panels to carry heavy sand and gravel. Panels are connected by spiral wire to increase firmness. And multi-cellular structure makes it easier to create a limitless bullet-proof and explosive-proof barrier.

The sand bastions are recoverable which largely cuts the costs of recovery of materials when decommissioning a military base.

Protection Level

Applications

Functionalities

SECURE AND RELIABLE

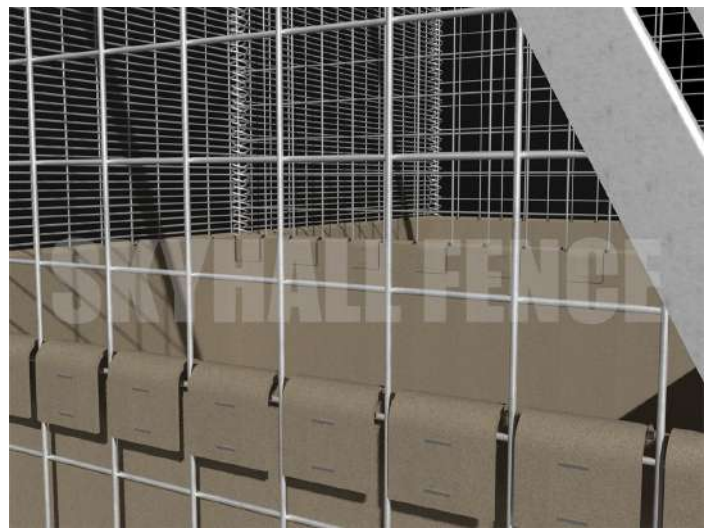
Filled with sand or gravel, the welded bastion barrier will be gifted exceptional strength to protect personnel and equipment from enemy fire.

RECOVERABLE

We provide recoverable defensive barriers to cut the costs of recovery of materials when decommissioning a military base. Just open the cell by removing the pin, then the material will flow freely from the cell and you can recover the bastion barrier in a flat packing.

EASY ASSEMBLY

Our defensive barrier comes as a flat-packed unit and can be assembled faster with minimal manpower, handling equipment, and fill material. That can largely save you time and manpower compared with the previous sandbag barrier.



CONVENIENT TRANSPORTATION

Save transportation costs. It can be folded, transported and assembled at the construction site.

AVAILABLE COLORS

Sand bastions from SKYHALL® Fence are available in desert-sand.
