SEALED POWER® PISTON/RING COMBO

Sealed Power® piston and ring sets perform exceptionally well together, matching piston design with the ideal ring technology for every application.

These combination sets include cast hypereutectic and forged pistons, weight-graded and sized to application. Each set of pistons is precision matched with the appropriate Sealed Power piston ring.

Pistons in each set feature DUROSHIELD® skirt coating, which is designed to reduce friction and prevent scuffing, leading to an enhanced ring seal, increased horsepower and extended piston life.

Ring combinations include:

- Moly-faced or plasma-faced top rings
- Premium-quality second rings
