

# SECURITY

ChekOne is a powerful end-to-end solution to track, record and manage security activities in real-time answering the questions:

- Did my guard arrive on time?
- Did they complete their security checks?
- How long did it take them?
- Are they safe?

- ✔ SIMPLE
- ✔ POWERFUL
- ✔ FAST
- ✔ AFFORDABLE
- ✔ INNOVATIVE

# CHEKONE for SECURITY

The ChekOne ruggedized handheld device is a fully featured Cell Phone, GPS and Barcode Scanner developed for the security industry. The ChekOne web based software provides a feature rich solution solving contract compliance, regulatory compliance, payroll data collection, event and condition reporting and worker safety, while gaining efficiencies and cost savings.

## It's about Service Delivery

- Time stamped check-ins to determine if guards are showing up on time
- GPS to ensure guards are on site
- Alerts for missed or late checks
- Add details to your checks for enhanced reporting
- Download routes to optimize alarm response performance
- Time stamped checks for customer service validation
- Optional customer portal to view reports
- Alerts for real-time response to actionable events
- Restricted phonebook to reduce distraction

## It's about Guard Safety

- GPS tracking – when location and tracking is important
- Panic button – call dispatch or straight to 911
- Automated timer to prompt guards to check-in on a regular basis
- Alerts for missed guard check-ins

## It's about Cost Control

- Time stamped check-out to verify hours worked
- Lowest cost check points at cents per barcode compared to dollars for other solutions
- Cost consolidation – combine our device with phone, GPS, SMS, carrier charges, data hosting, and reporting tools
- Customizable restricted voice calling – eliminating cell phone abuse
- Text messaging with receipt confirmations for workflow optimization
- Time savings – data entry eliminated and client reporting automated
- Paper cost reductions – no inspection forms or time sheets required
- Performance management – Contractors and employees are accountable

## Pricing

- One low monthly service fee for combined device, software, hosting and carrier charges. All services are on a pooled basis to assist in keeping costs down.

## Software Features

**Web Based** – No software to install and manage. Simply log into the web based application wherever you are.

**Easy to Use** – The Intuitive web based user interface makes using ChekOne near effortless. Simply follow the menu driven pages to set up customers, employees, and check points. The software generates the barcodes for you which are printed on any inkjet printer. You can be ready to start patrols within hours.

**Robust Reporting** – Generating reports is easy and dynamic. Reports can be sorted by date, location, employee, and activity. You can get time and attendance reports, patrol reports and inspection reports. Share reports with the click of a button.

**Customize Routes** – When routes are important, you can customize them and push routes to the ChekOne device when a location barcode is scanned. Ideal for alarm response services and for onboarding new guards.

**Check Details** – To enhance your reporting you can add up to three layers of details to check points ex. secure vs not secure – if not secure – unlocked vs broken – if broken – break-in vs damaged.

**Customer Reporting** – Create a customer portal to allow customers to access their security reports online or share reports by email with the push of a button.

**GPS Tracking** – From the software you can turn GPS on for any device in the field to locate your guards. GPS can be set to send GPS coordinates in set intervals to produce a cookie trail on Google maps to ensure mobile guards are performing their routes.

## Device Features

**Assignable** – Devices are assignable to any guard by scanning the guard ID barcode. Reduces costs as not every guard needs a dedicated device.

**Easy To Use** – Menu driven single button operation results in significantly reduced training time. Guards learn to use the device in minutes.

**Real Time** – Data is captured and uploaded to the web software in real-time. Who did what, when, where and for how long? No more waiting for data to download at the end of the day and no more interpreting incomplete hand written forms. Real time data capture allows you to react to events when they happen such as missed security checks and lone worker alerts.

**Onboard Memory** – ChekOne's onboard memory allows you to save up to 1000 scans when you are out of cell coverage. Scans are automatically sent when you are back in cell coverage.

**Rugged** – The ChekOne casing is made of durable injection moulded components making it ideal for the security industry. The casing is moisture resistant and ABS shock proof.

**Restricted calling** – Once assigned to a guard by scanning the guard ID, the device is provisioned with the guard's restricted phone book. The guard is restricted to only making calls to those listed in the phone book reducing distractions, time theft and cell charges.

**Emergency Calling** – If a guard is under threat, simply holding the button down for three seconds will dial an assigned emergency number. If the button is held down for six seconds a 911 call will be made.

**Messaging** – SMS messages can be sent to the device to provide instructions. Guards can respond to by selecting pre-set answers to relay information or confirmation of activities.

**Lone Worker Safety** – ChekOne supports Lone Worker compliance. Preset internal timers provide guards with prompts to communicate that they are safe. Failure to respond to a prompt creates an alert providing details of worker name, last location address, last scan, GPS position and device phone number.

Durable injection moulded casing - moisture resistant and ABS shock proof.

Single button operation resulting in reduced training time.

Single push button to initiate panic and 9111 calling

Cellular phone and SMS to enhance communications

GPS for proof of service and safety.

Menu driven navigation simplifies use for the guards.

Lone worker mode to enhance compliance with Lone Worker Legislation
