HOW TO SET UP PAYPAL IN THE APP

This document will talk you through how to set up PayPal in your app, allowing in-app payments to go straight into your account.
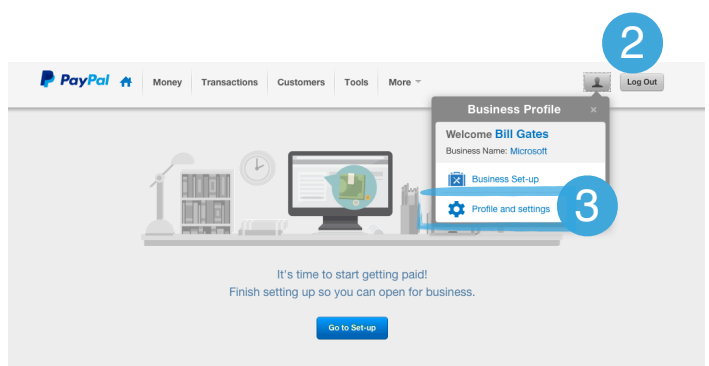

IMPORTANT: To use this feature you must have a Business or Premier account

1. Login to your PayPal Business or Premier account:
   https://www.paypal.com

2. Click the **Profile** icon

3. Select '**Profile and settings**'.

4. Select the '**My selling preferences**' tab

5. Click '**Update**' at the end of 'API access'.

6. Select the '**Request API signature**' selection box.

7. Click '**Agree and Submit**'.

8. Click '**View API Signature**' link.

9. Click each '**Show**' link next to the Username, Password and Signature list to reveal your API information.

10. You will need to copy the '**API username**', '**API Password**' and the '**Signature**'.

11. Paste each section into the corresponding input fields in **Global Settings** within the CMS.

12. Scroll to the bottom of the CMS page and '**Save Settings**'.

Congratulations!

You have successfully set up PayPal to be used within your app for in-App purchases.
