205 San Marin Dr Suite 5, Novato CA 94945

DUST CONTROL PLAN

6 School House Road Demolition Project | 6 School House Road, Fairfax, CA
Building Permit: BLD26-0346 | October 20, 2026

Purpose

This plan describes dust-control measures for demolition, debris processing, material separation, loading, and hauling at the project site.

Dust-Control Equipment

Two water buffaloes (portable water tanks) will be kept on site to supply water for dust suppression throughout the work.

Dust-Control Procedures

• Apply water with hoses or spray nozzles to demolition areas and debris as needed to limit airborne dust.
• Maintain water suppression while two excavators demolish the buildings to grade and while material is crushed, separated, handled, and loaded.
• Damp down material piles and loading areas as needed, avoiding excessive runoff.
• Cover trucks carrying loose demolition debris before they leave the site.
• Keep the asphalt-paved loading zone and on-site truck travel path clean and clear to minimize track-out to the public right-of-way. Promptly clean any track-out.
