2026 COLLECTION / ENGLISH

Access & integrations.

Check membership at every entry. Reception and doors use the same records, and visits are logged.

trainera.fit

Members show their card. The system connects the rest.

CONTENTS

Everything connected. Everything in its place.

From an overview to real examples: choose the topic that matters to the way you work.

03 Less searching. A clearer welcome.

RECEPTION

Less searching. A clearer welcome.

Members show their QR code in the app, and reception immediately sees their profile and membership. Staff can answer plan questions from the same view they use to log visits.

01	Recognise the member	A photo and name help staff check who is standing at reception. The profile connects membership, visits and recorded outstanding balances.
02	See the status immediately	Immediately see whether a plan needs renewing or a balance needs settling: check-in shows expiry, time remaining and alerts.
03	Check in without a phone	Find a member by number, name or email address and log their visit. Linked physical cards are supported, too.

The scene illustrates a reception workflow.

FROM CARD TO ACCESS

Valid membership. Access granted.

A connected reader checks the card through Trainera before opening. Staff see approved check-ins in shared records, and rejected entries have a reason.

App preview / demonstration data

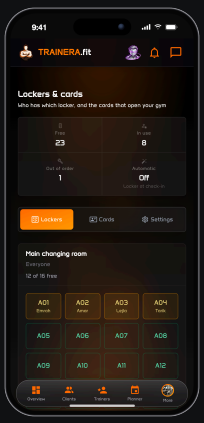
01	The card identifies the member	Members use a signed QR code, NFC/RFID card, wristband or key fob. Each leads to the same profile for verification.
02	Verification before opening	The system checks membership, limits and code validity. The first entry reactivates a frozen membership and restores the frozen days.
03	Every entry stays on record	Reception sees an approved visit immediately; the controller receives the decision. Rejections include a reason staff can check and explain to the member.

Turnstile checks do not currently enforce opening hours or plan-specific access time windows.

READERS, CARDS & LOCKERS

Convenient entry. Organised changing rooms.

Keep the equipment that suits your club and add what is missing. One member profile connects cards, check-ins and the assigned locker.



App preview / demonstration data

01 **The reception reader**

Readers such as the Honeywell Voyager 1470g or Zebra DS2208 scan phone QR codes. We check USB readers and settings before use.

02 **Keep compatible cards**

NFC/RFID cards, wristbands and key fobs link to the member. We check existing readers and formats before you buy new equipment.

03 **A locker linked to the member**

Members see their locker in the app. Assign it by zone manually or at check-in, for a single visit or a rental period.

Locker assignment does not require electronic locks.

VISIT OVERVIEW

Visits are visible. Staff know what comes next.

Reception and connected entrances feed the same visit overview and statistics. Check-ins can trigger available automations, while staff see the member's plan and status alongside each visit.

App preview / demonstration data

01	Follow the flow of members	See a photo, plan, expiry and alerts with each visit. Repeat scans by the same member within two minutes count as one entry.
02	Reception without internet	Check-ins can continue using the saved member list. Records synchronise when the connection returns, making new information available.
03	Doors need a connection	The controller needs a network connection to verify membership. During installation, you agree whether doors stay open under supervision or locked if the connection fails.

Offline reception check-in does not imply offline membership verification at physical doors.

OPTION 01 / TRIPOD

Clear access. A reliable routine.

Direct visits through a clearly defined lane. A three-arm tripod allows one member through after an approved check-in, alongside digital cards and your existing reception.

01	Model from the supplied quote	Dahua DHI-ASGG120F. The original quote specifies a stainless steel housing and the option of controlled entry with free exit.
02	Configured for your entrance	We select the device, reader and connection to suit the space. We confirm the configuration, equipment and installation after reviewing your entrance.
03	Preparing the entrance	We plan reader positioning, power, networking and access. Exit behaviour and arm lowering are checked with the installer for the selected device.

Illustration of a tripod entrance, not a photograph of the specified model. A wider accessible lane is planned separately.

OPTION 02 / GLASS BARRIER

An open feel. Controlled access.

For a reception area where an open appearance matters: a swing barrier connects a QR code or card to membership. We select the number and width of lanes to suit the space.

01 **Model from the original quote**

Dahua DHI-ASGB110K swing barrier. The quote specifies a 600 mm acrylic wing, sensors and manual wing opening without power.

02 **One or two lanes**

One lane uses left and right posts. A middle post creates a second lane. We adapt the number of lanes and equipment layout to the flow of members.

03 **Width matched to real needs**

A suitable wider configuration is selected for wheelchairs, accessibility and moving equipment. A standard wing does not confirm an accessible passage width.

The image illustrates the entrance type, not the specified model. We confirm the final configuration and compatibility for your premises.

OPTION 03 / DOORS

Your doors. Connected to membership.

Connect an existing studio or small gym entrance to membership. A wall-mounted QR reader can control a compatible electric lock; automatic sliding doors are quoted separately.

01 **Existing doors**

We first assess the doors, lock and controller. Compatible equipment is retained and connected to Trainera verification.

02 **Automatic sliding doors**

We select automatic sliding doors to suit the structure, opening width and site conditions. Equipment and connections are confirmed after a site review.

03 **Entry and exit as one system**

We agree on behaviour during power or connection failures, exit arrangements and required equipment. The installer confirms the implementation for the specific site.

The image illustrates a door with a QR reader. We assess the door type, controller and installation against the actual entrance.

CHOOSE YOUR SOLUTION

The right fit for your space. A quote without guesswork.

Choose an entrance type to suit your space, number of lanes and members' needs. Together, we review existing equipment, connections and installation.

01 Tripod / one lane

A tripod admits one member at a time after an approved check-in. We plan reader placement, power and networking around your entrance.

02 Swing / one or two lanes

A swing barrier offers one or more lanes. We select the width, post layout and accessible passage to suit the space.

03 Automatic sliding doors

We connect existing or automatic doors after checking compatibility. The lock type, controller and site conditions determine the configuration.

Technical details follow the supplied documentation. The final configuration is confirmed for your space.

INSTALLATION & INTEGRATION

From an entrance photo to the first scan.

Get an agreed process from site assessment to staff training. A partner installs access control; our team connects devices to your Trainera account and checks card operation.

01	A quote for your space	To tailor the quote to your entrance, send photos and measurements. Together we choose lanes, devices, readers, power and networking.
02	Equipment works with the system	Keep a supported controller and connect it to Trainera. For other equipment, we first check whether an integration module is possible.
03	A team ready for the first visit	We test valid and expired memberships, limits and connection failures. Staff learn the process before the system goes live.

Connecting up to 10 doors, readers or lanes is included in gym plans. Hardware and installation are agreed separately.

TECHNICAL PLANNING

A ready entrance starts with good preparation.

A site assessment before purchase helps you choose suitable equipment. Networking, lane width and existing devices are aligned with the actual flow of members.

01

Power & networking

Power and a wired internet connection to the controller for reliable communication with the system.

02

QR codes on screens

A 2D reader that scans phone screens. A USB reception reader works like a keyboard.

03

Relays & connections

Connect existing equipment through a supported HTTPS/API controller or an intermediary module.

04

Accessible passage

Width, exit arrangements and behaviour during power failures are agreed with the installer.

05

Checks before launch

Test active and expired memberships, limits, access rejection and event logging.

06

Technogym mywellness

Send members, memberships, visits and cards to mywellness. Available on request with your own Technogym API agreement.

Content sources: both supplied access catalogues and Trainera's current access control offering.

SUPPORT FROM DAY ONE

A clear start. Support along the way.

Walk through member check-in before the first working day. The manual and support team help staff use reception and understand the entrance process.

App preview / demonstration data

01	A start tailored to you	Set up profiles and roles so staff can access their part of reception work.
02	Guidance in English	When you need guidance, follow real screens in the manual through to a completed task.
03	Talk to our team	Describe your entrance and member check-in process. Our team walks you through setup and plan options.

IN PRACTICE / ACCESS & INTEGRATIONS

Grand Fit & Beauty

Dubrovnik

Membership connected to access.

Brand website preview / access equipment illustration

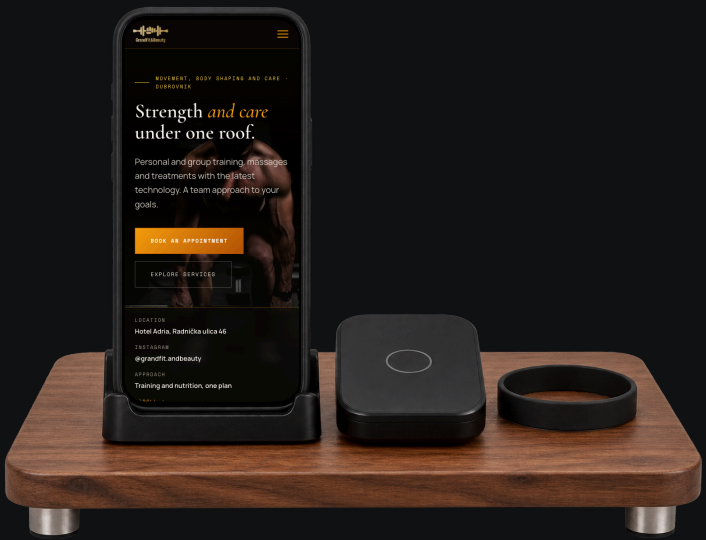
grandfitandbeauty.com

01	Access integration	For Grand Fit & Beauty, we connected the digital solution with physical access to the premises.
02	A recognisable brand	The website and app present the club under its own name and visual identity.
03	A clear offering	Visitors can explore training and beauty services and arrange an appointment.

COMPLETED INTEGRATION / GRAND FIT & BEAUTY

Membership and access. A connected experience.

Integration for Grand Fit & Beauty · Dubrovnik.



Brand website preview / access equipment illustration

01	A recognisable welcome	Members recognise the club by its name, colours and dedicated digital address.
02	Connected access	The digital solution and access integration form part of the completed project.
03	Your equipment and rules	For a new location, we first define the entry method, equipment and membership rules.

IN PRACTICE / ACCESS & INTEGRATIONS

X-TREME FITNESS

Sinj

From the first visit to the entrance.

Brand website preview / access equipment illustration

xtremeboxfitness.com

01	Access integration	We also implemented access integration for X-TREME FITNESS in Sinj.
02	A club under its own name	The website and app reflect the recognisable X-TREME identity.
03	Explore the offering before visiting	Programmes, schedules and prices help new members choose their next step.

COMPLETED INTEGRATION / X-TREME FITNESS

Membership and access. Under one name.

Integration for X-TREME FITNESS · Sinj.

Demonstration membership card / access equipment illustration

01	A recognisable welcome	Members recognise the club by its name, colours and dedicated digital address.
02	Connected access	The digital solution and access integration form part of the completed project.
03	Your equipment and rules	For a new location, we first define the entry method, equipment and membership rules.

A CONNECTED SYSTEM

Integration tailored to your entrance.

From the first visit to regular membership: every step has its place.

MEMBER

01

A recognisable welcome.

The website and app present your club and its offering.

MEMBERSHIP

02

A clear access rule.

The member's status connects to the rules of their plan.

ENTRANCE

03

Equipment in the same process.

Access is aligned with the space, selected equipment and daily operations.
