Compatible with both Windows and Mac, Easy Stand Alone 2 software has evolved over the years to become a worldwide reference for architectural lighting control. It only requires a few minutes to setup the software and gain full control of any kind of lighting.

Easy Stand Alone 2
Simple & efficient

Now compatible with the entire STICK range, our new ESA Pro 2 software combines many innovations along with an ergonomic design. Entirely designed from scratch, ESA Pro 2 is now Mac and PC compatible and offers amazing new features like timeline automation, pixel mapping, multi-zone programming...

Tabs
Setup: insert your lighting fixtures
Editor: easily create your scenes
User: control your lights in live mode
Stand Alone: write to the interface

Scenes
Creating scenes can be carried out very easily. For each scene, the software allows you to determine any number of steps, the number of loops, as well as the following scene.

Faders
The vertical faders at the bottom of your screen correspond to the DMX level (0 to 255) for each channel. There are several ways to modify these levels.

Scene builder
Arrange your lighting fixtures and easily create stunning RGB/RGBW color mixing and moving effects with the new scene builder.

Steps
Each Step has a fade time and a waiting time which can be set. By creating several steps in sequence, you will then build a dynamic scene.

Timelines editor
Every scene is built with the timelines. Thanks to this tool, it becomes very easy to build your show. Various effects, static or dynamic, are available and can be dragged to the timelines.

Pixel mapping
Position your LED fixtures according to your installation and map them to pixels using different shapes in order to apply multiple effects across them.

Automations
Color, dimmer, saturation... all effects properties can now be modified with linear curves on top of the timelines. For example, the dimmer of an effect could fade from 0% to 100% following the time.

Full colors management
In addition to RGB colors, ESA Pro 2 allows you to play amazing effects on any color or color mixing system: RGBW, RGBA, white only, tunable white...
