MINOR NPDES PERMIT MODIFICATION

issued to

Exeter Energy, L.P.
10 Exeter Drive
P.O Box 188
Sterling, CT 06377

Attention: Tom Harnsberger

Facility ID: 136-006

Permit ID: CT0026972

Location Address:
10 Exeter Drive
Sterling, CT 06377

This permit modification is in accordance with section 22a-430 of Chapter 446k, Connecticut General Statutes ("CGS"), and Regulations of Connecticut State Agencies ("RCSA") adopted thereunder, as amended, and a modified Memorandum of Agreement (MOA) dated June 3, 1981, by the Administrator of the United States Environmental Protection Agency which authorizes the State of Connecticut to administer a Pretreatment Program pursuant to 40 CFR Part 403.

The Commissioner of Environmental Protection ("the Commissioner") has made a final determination on this permit modification and found that continuance of the existing system as modified to treat the discharge will protect the waters of the state from pollution (DSN001-1). The Commissioner's decision is based on Application No. 201006533 and the administrative record established in the processing of that application.

Exeter Energy, L.P., ("Permittee"), shall comply with all conditions of Permit No. CT0026972 issued on January 31, 2007 with the following modification:

1. The monitoring location description for Tables B and D in Section 5 of this permit are hereby revised and superceded with the respective tables attached hereto.

2. Section 5, Table E (Influent) has been eliminated.

The Commissioner hereby authorizes the Permittee to discharge in accordance with the provisions of this permit modification, Permit No. CT0026972, the above referenced application, and all approvals issued by the Commissioner or the Commissioner's authorized agent for the discharges and/or activities authorized by, or associated with, this permit.

The Commissioner reserves the right to make appropriate revisions to the permit in order to establish any appropriate effluent limitations, schedules of compliance, or other provisions that may be authorized under the Clean Water Act or the Connecticut General Statutes or regulations adopted thereunder, as amended. The permit as modified under this paragraph may also contain any other requirements of the Clean Water Act or Connecticut General Statutes or regulations adopted thereunder which are then applicable.

All other terms and conditions of Permit No. CT0026972 issued on January 31, 2007 shall continue in full force and effect.

This permit modification is hereby issued on February 22, 2011

**Table Footnotes and Remarks:**

**Footnotes:**

1. For this parameter the Permittee shall maintain at the facility a record of the Total Daily Flow for each day of discharge and shall report the Maximum Daily Flow Rate for each month.

2. The first entry in this column is the ‘Sample Frequency’. If this entry is not followed by a ‘Reporting Frequency’ and the ‘Sample Frequency’ is more frequent than monthly then the ‘Reporting Frequency’ is monthly. If the ‘Sample frequency’ is specified as monthly, or less frequent, then the ‘Reporting Frequency’ is the same as the ‘Sample Frequency’.

3. Minimum Level Test refers to Section 6(A)(3) of this permit.

**Remarks:**

All samples shall be taken within 30 minutes after the start of the discharge from the storm event.
### Table D. From August 31, 2010 until permit expiration, the Permittee shall comply with the following final limits:

FOR NPDES DISCHARGES

Drainage basin Code: 3500  Present/Future Water Quality Standard: C/Bc

NATURE OF BUSINESS GENERATING DISCHARGE

Waste to energy facility that burns whole tires as a fuel source.

PROCESS AND TREATMENT DESCRIPTION (by DSN)

The process generates high pressure steam that is used to generate electrical power. Stormwater from the site receives treatment in a settling pond before discharge to the Moosup River.

RESOURCES USED TO DRAFT PERMIT

X Treatability Manual
X Department File Information
X Connecticut Water Quality Standards
X Other

BASIS FOR LIMITATIONS, STANDARDS OR CONDITIONS

X Best Professional Judgment (See Other Comments)
DSN 001-1: LC₅₀, Oil/grease, and TSS

X Case-by-Case Determination (See Other Comments)
DSN 001-1: LC₅₀, Oil/grease, and TSS

X In order to meet in-stream water quality (See General Comments)
DSN 001-1: Cadmium, Copper, Lead, pH, and Zinc

OTHER COMMENTS

The Department received a modification request for Permit No. CT0026972 and fee on December 6, 2010. The following permit modifications have been made:
Section 5, Tables B and D monitoring location descriptions have been modified from “Settling Pond Effluent at Weir,” to “In the Diversion Manhole.” The revised Tables B and D have been attached to reflect these changes. This permit modification is necessary to address the approved changes to the treatment settling basin. This retention basin has been redesigned to allow in-plant reuse of runoff associated with industrial activities and retention of a 100-yr storm event. A new diversion manhole was installed as part of the approved system modification to reroute stormwater from the site directly to Moosup River for storm events larger than a 100-yr storm bypassing the new redesigned retention basin. The new diversion manhole will be the new sampling location for DSN001-1.

Section 5, Table E has been eliminated because this monitoring is no longer useful to evaluate the settling basin performance. The settling basin has been converted into a 100-yr retention basin.

Multimedia Consent Order No. 1272 was issued to the Exeter Energy on Nov 23, 1992 to address Air, Water, and Dam Safety issues. The order has not been closed out yet due to one outstanding issue related to sediment contamination associated with Exeter’s discharge to the Moosup River.
