DEPARTMENT OF ENVIRONMENTAL MANAGEMENT

OFFICE OF WATER RESOURCES
235 Promenade Street, Providence, Rhode Island 02908

February 4, 2022

CERTIFIED MAIL

Mr. Stephen A. Cardi, II, Manager Hopkins Hill Sand & Stone, LLC 400 Lincoln Ave. Warwick, RI 02888

RE: Final Permit for Hopkins Hill Sand and Stone, LLC

RIPDES Permit No. RI0023965

Dear Mr. Cardi:

Enclosed is your final Rhode Island Pollutant Discharge Elimination System (RIPDES) Permit issued pursuant to the referenced application. State regulations, promulgated under Chapter 46-12 of the Rhode Island General Laws of 1956, as amended, require this permit become effective on the date specified in the attached permit. Also enclosed is the "Response to Public Comments" received on the draft permit and information relative to hearing requests and stays of RIPDES Permits.

Please note that effluent turbidity monitoring has been added to Part I.A.1. of your permit. The effluent turbidity level shall not exceed 5 Nephelometric Turbidity Units (NTU) above background turbidity. Background turbidity shall be evaluated at a location upstream of the discharge on the same day that effluent turbidity samples are taken. Your facility must propose a background turbidity sampling location that is accessible to sampling personnel and your facility must submit that proposal to DEM for review, modification, and approval within one month of the permit effective date (i.e., by May 1, 2022), per Part I.A.3. of your permit. Background turbidity results shall be analyzed by an independent laboratory and reported in the cover letter to each quarterly Discharge Monitoring Report. Turbidity results for each year shall be reported on your facility's Annual Comprehensive Site Inspection Report that is due on January 15 of each year, covering the prior calendar year, per Part I.B.5.c.(9) of your permit.

Please also note that your facility is required to submit a Discharge Monitoring Report every quarter, per Part I.D.2 of your permit. Your first DMR, which is for the second calendar quarter of 2022, will be due by July 15, 2022. DMR instructions are attached. DMRs must be submitted electronically via NetDMR. It will be necessary for your facility to sign up for NetDMR privileges in order to use the NetDMR system. Guidance on how to sign up for NetDMR via EPA's Central Data Exchange (CDX) can be found on DEM's website, on the following webpage, under "Guidance":

http://www.dem.ri.gov/programs/water/permits/ripdes/reporting.php

Mr. Stephen A. Cardi, II Pg. 2 of 2

February 4, 2022

We appreciate your cooperation throughout the development of this permit. Should you have any questions concerning this permit, feel free to contact Samuel Kaplan of the State Permits Staff at (401) 222-4700, extension 2777046 or samuel.kaplan@dem.ri.gov. If you have questions related to signing up for a CDX account or on the submittal of DMRs via NetDMR, feel free to contact Crystal Charbonneau of the RIPDES Program at Crystal. Charbonneau@dem.ri.gov.

Sincerely,

Joseph B. Haberek, PE

Administrator for Surface Water

Response to Public Comments Hopkins Hill Sand and Stone, LLC RIPDES Permit No. RI0023965

The Rhode Island Department of Environmental Management (DEM) solicited public comments on the draft Rhode Island Pollutant Discharge Elimination System (RIPDES) permit for the Hopkins Hill Sand and Stone, LLC facility from October 1, 2021 to November 10, 2021.

DEM's Responses 1 through 5 address Comments 1 through 5 that were made by Ms. Renu Englehart of East Greenwich, RI in a letter submitted to DEM electronically on November 3, 2021. Response 6 addresses Comment 6 that was made by Mr. Glen Place, President of the Rhode Island chapter of Trout Unlimited, in a letter dated November 4, 2021 that was received by DEM electronically on November 4, 2021.

Comment 1

Ms. Englehart indicated her support for the issuance of the RIPDES permit. She expressed concern what she characterized as a delayed response on the part of DEM to citations /formal enforcement actions that DEM has issued to the facility, and to what she characterized as a lack of testing of effluent being discharged from the site.

DEM Response 1

The final permit contains effluent monitoring and effluent limitations, requires quarterly monitoring of effluent parameters, and requires the facility to submit and comply with a Stormwater Pollution Prevention Plan. Limitations for Total Suspended Solids and limits for pH have been written into the permit. In addition monitoring for Flow, Nitrate+Nitrite, Total Nitrogen, and Perchlorate have been written into the permit. Under the permit, the facility must monitor and report these parameters to DEM each quarter.

Comment 2

Ms. Englehart asked whether DEM would have a system in place to follow up on quarterly testing violations for testing data submitted by the facility under the proposed permit.

DEM Response 2

The RIPDES Program monitors compliance of permitted RIPDES facilities and follows up on RIPDES permit compliance violations. The RIPDES Program routinely evaluates compliance via a quarterly review of compliance monitoring data submitted to DEM via the NetDMR electronic reporting system. Compliance data submitted by NetDMR is made publicly available on EPA's ECHO (Enforcement and Compliance History Online) website at https://echo.epa.gov. In addition to the RIPDES Program's quarterly evaluation process performed on effluent data submitted by permitted RIDES facilities, if a permitted facility fails to report data to DEM via NetDMR in a timely manner, RIPDES would follow up with the facility to ensure that data is submitted.

Comment 3

Ms. Englehart expressed concern regarding past and present environmental impacts from the site.

DEM Response 3

As noted in the Statement of Basis, the effluent limits in the RIPDES permit for the facility are protective of water quality and human health.

Development of RIPDES permit limitations is a multi-step process consisting of: determining if Federal effluent guidelines apply; calculation of allowable water quality-based discharge levels based on background data and available dilution; assigning appropriate Best Professional Judgement (BPJ) based limits; comparing existing and proposed limits; comparing discharge data to proposed limits; performing an antidegradation/antibacksliding analysis to determine the final permit limits; and assigning final limits.

Water quality criteria are comprised of numeric and narrative criteria. Numeric criteria are scientifically derived ambient concentrations developed by EPA or the State for various pollutants of concern to protect human health and aquatic life. Narrative criteria are statements that describe the desired water quality goal. A technology-based limit is a numeric limit, which is determined by examining the capability of a treatment process to reduce or eliminate pollutants.

Comment 4

Ms. Englehart offered additional comments, that she acknowledged were not specifically related to the RIPDES permit. Those comments related to her concerns about Wetlands that run through property, and her concerns about the existence of litter along the access road.

DEM Response 4

Regarding the concern about wetlands, the facility was issued an Insignificant Alteration Permit from DEM's Freshwater Wetlands Program on May 19, 2021 in response to a Request for Preliminary Determination application for treatment system the facility has proposed to construct to treat effluent from Outfall 001. Regarding the concern about litter, the RIPDES permit for the facility requires that the facility develop a Stormwater Pollution Prevention Plan (SWPPP) and submit the SWPPP to DEM. The SWPPP requirements listed Part I.B.5.b. of the RIPDES Permit include requirements for the control of litter on the site and for the maintenance of trash removal from the site. There requirements may be found in Part I.B.5.b.(4) of the RIPDES permit. Litter control is also addressed in I.B.5.e.(1).b. of the RIPDES Permit.

Comment 5

Ms. Englehart commented on the lack of a public hearing. She requested a public meeting to address concerns and asked that if such a meeting were not held, that DEM publicize the process by which violations are handled.

DEM Response 5

Please see response to Comment 2 relating to how DEM monitors compliance at permitted RIPDES facilities and which mentions EPA's ECHO transparency portal which the public may use to view compliance status of RIPDES facilities.

As indicated in public notice, DEM would hold a hearing if requested by 25 or more members of the public. DEM did not receive a request for hearing from any commenters who met those conditions, therefore, a hearing not held. However, today's letter provides a response to the comments DEM received in writing during the public comment period.

Comment 6

Mr. Place stated that his chapter was awarded a grant to conduct a study in the Big River Management Area. He stated that the goal of the study was to assess habitat and make recommendations for future conservation needs. Mr. Place stated that the study found several wild

brook trout in the unnamed tributary to the Carr River adjacent to Hopkins Hill Sand and Stone. Mr. Place stated that the results of the study suggested that the area studied was suitable for sustaining wild brook trout on a year-round basis. Mr. Place expressed concern of the impact of the fine sediments in the discharge from the facility which Mr. Place said were observed at the sampling site and the impact such sediments may have on wild brook trout. Mr. Place noted that the Carr River is a "Class A" water under the Rhode Island Water Quality Regulations (250-RICR-150-05-1).

DEM Response 6

To address potential impacts to brook trout, DEM has added instream turbidity monitoring and effluent turbidity limits to the final permit, in order to provide an extra mechanism for protecting aquatic life in the receiving water. This turbidity monitoring is in addition to the permit limits for Total Suspended Solids. Please refer to Section I.A.3. of the facility's final permit. The permittee shall conduct instream turbidity sampling at a location upstream of the discharge. Within one month of permit issuance, the permittee shall propose to DEM an upstream location where turbidity sampling shall be taken. The location that the facility proposes shall be subject to DEM review, modification, and approval. The turbidity sampling location that the facility proposes shall be accessible to sampling personnel. Instream sampling will consist of turbidity monitoring once per quarter when effluent is being discharged. Turbidity sampling shall be undertaken by an independent laboratory hired by the permit. Turbidity results shall be reported in Nephelometric Turbidity Units (NTU's). The results shall be reported in a cover letter to the Discharge Monitoring Report and reported in the Annual Comprehensive Site Evaluation Report (Part I.B.5.c.(9)).

HEARING REQUESTS

If you wish to contest any of the provisions of this permit, you must request a formal hearing within thirty (30) days of receipt of this letter. The request should be submitted to the Administrative Adjudication Division at the following address:

Mary Dalton, Clerk
Department of Environmental Management
Office of Administrative Adjudication
235 Promenade Street
3rd Floor, Rm 350
Providence, RI 02908

Any request for a formal hearing must conform to the requirements of §1.50 of the Regulations for the Rhode Island Pollutant Discharge Elimination System (RI Code of Regulations; 250-RICR-150-10-1.50).

STAYS OF RIPDES PERMITS

Should the Department receive and grant a request for a formal hearing, the contested conditions of the permit will not automatically be stayed. However, the permittee, in accordance with §1.51 of the Regulations for the Rhode Island Pollutant Discharge Elimination System (RI Code of Regulations; 250-RICR-150-10-1.51), may request a temporary stay for the duration of

adjudicatory hearing proceedings. Requests for stays of permit conditions should be submitted to the Office of Water Resources at the following address:

Joseph B. Haberek, P.E.
Administrator of Surface Water Protection
Office of Water Resources
235 Promenade Street
Providence, Rhode Island 02908

All uncontested conditions of the permit will be effective and enforceable in accordance with the provisions of §1.50 of the Regulations for the Rhode Island Pollutant Discharge Elimination System (RI Code of Regulations; 250-RICR-150-10-1.50).

AUTHORIZATION TO DISCHARGE UNDER THE RHODE ISLAND POLLUTANT DISCHARGE ELIMINATION SYSTEM

In compliance with the provisions of Chapter 46-12 of the Rhode Island General Laws, as amended,

Hopkins Hill Sand & Stone, LLC 400 Lincoln Ave. Warwick, RI 02888

is authorized to discharge from a facility located at

Hopkins Hill Sand & Stone, LLC 190 New London Turnpike West Greenwich, RI 02817

to receiving waters named

Carr River via unnamed Wetland tributary

in accordance with effluent limitations, monitoring requirements and other conditions set forth herein.

This permit shall become effective on April 1, 2022.

This permit and the authorization to discharge expire at midnight, five (5) years from the effective date.

This permit consists of 16 pages in Part I including effluent limitations, monitoring requirements, etc. and 10 pages in Part II including General Conditions.

Signed this

day of

2022

Joseph B. Haberek, P.E., Administrator for Surface Water Protection

Øffice of Water Resources

Rhode Island Department of Environmental Management

Providence, Rhode Island

A. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

1. During the period beginning on the effective date and lasting through permit expiration, the permittee is authorized to discharge from outfall serial number(s) 001 (Discharge from the final settling basin to the wetland area flowing into the Carr River).

Such discharges shall be limited and monitored by the permittee as specified below:

Effluent	Discharge Limitations				Monitoring Requirement		
Characteristic	Quantity - Ib Average <u>Monthly</u>	s./day Maximum <u>Daily</u>	Concent Average Monthly *(Minimum)	ration - specify ur Average <u>Weekly</u> *(Average)	nits Maximum Daily *(Maximum)	Measurement Frequency	Sample <u>Type</u>
Flow	MGD	MGD	(<u>iviii ii i</u>	(<u>/ 1701 ago</u>)	(Maximani)	1/Quarter	Estimate ¹
TSS			25 mg/l		45 mg/l	1/Quarter	Grab ²
рН			(6.5 S.U.)		(9.0 S.U.)	1/Quarter	Grab ²
Nitrate + Nitrite, as N			mg/l ³		mg/l ³	1/Quarter	Grab ²
Total Nitrogen, as N			mg/l		mg/l	1/Quarter	Grab ²
Perchlorate			mg/l		mg/l	1/Quarter	Grab ²
Turbidity			NTU ⁴		NTU ⁴	1/Quarter	Grab ²

⁻⁻⁻ Signifies a parameter which must be monitored and data must be reported; no limit has been established at this time.

^{*}Values in parentheses () are to be reported as Minimum/Average/Maximum for the reporting period rather than Average Monthly/Average Weekly/Maximum Daily.

¹Average monthly flow should be calculated each month by summing the daily flows to outfall 001 and dividing by the number of days in each month. The Average Monthly value reported is the highest monthly average calculated for the three (3) months in each quarter. The daily maximum flow is the highest daily flow for the quarter.

²The "Grab" value shall be obtained using a grab sample, consisting of an individual sample of at least 100 mL, collected during the first thirty (30) minutes of a discharge. Samples must be obtained from a discharge of which is the result of a storm event that occurs at least seventy-two (72) hours after the previously measurable storm event. If it is not practicable to collect the sample during the first 30 minutes, the sample must be collected during the first hour of discharge and a description of why a grab sample during the first 30 minutes was impracticable must be included with the Discharge Monitoring Report in Part I.D. of this permit.

³See Part I.A.5 of the permit

⁴Turbidity not to exceed 5 NTU over background.

- 2. a. The discharge shall not cause visible discoloration of the receiving waters.
 - b. The effluent shall contain neither a visible oil sheen, foam, nor floating solids at any time.
- 3. The permittee shall conduct quarterly instream turbidity sampling at a location upstream of the discharge on the same day that effluent turbidity samples are taken. Within one month of the permit effective date, the permittee shall submit a written report to DEM evaluating and proposing an upstream location where turbidity sampling shall be taken. The location that the facility proposes shall be subject to DEM review, modification, and approval. The turbidity sampling location that the facility proposes shall be accessible to sampling personnel. Turbidity sampling shall be undertaken by an independent laboratory hired by the permit. Turbidity results shall be reported in Nephelometric Turbidity Units (NTU's). The results shall be reported in a cover letter to the Discharge Monitoring Report and shall also be reported in the Annual Comprehensive Site Evaluation Report (Part I.B.5.c.(9)).
- 4. All existing manufacturing, commercial, mining, and silvicultural dischargers must notify the Director as soon as they know or have reason to believe:
 - a. That any activity has occurred or will occur which would result in the discharge, on a routine or frequent basis, of any toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the following "notification levels":
 - (1) One hundred micrograms per liter (100 ug/l);
 - (2) Two hundred micrograms per liter (200 ug/l) for acrolein and acrylonitrile; five hundred micrograms per liter (500 ug/l) for 2,4-dinitrophenol and for 2-methyl-4,6-dinitro-phenol; and one milligram per liter (1 mg/l) for antimony;
 - (3) Five (5) times the maximum concentration value reported for that pollutant in the permit application in accordance with 40 C.F.R. s122.21(g)(7); or
 - (4) Any other notification level established by the Director in accordance with 40 C.F.R. s122.44(f) and Rhode Island Regulations.
 - b. That any activity has occurred or will occur which would result in the discharge, on a non-routine or infrequent basis, of any toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the following "notification levels":
 - (1) Five hundred micrograms per liter (500 ug/l);
 - (2) One milligram per liter (1 mg/l) for antimony;
 - (3) Ten (10) times the maximum concentration value reported for that pollutant in the permit application in accordance with 40 C.F.R. s122.21(g)(7); or
 - (4) Any other notification level established by the Director in accordance with 40 C.F.R. s122.44(f) and Rhode Island Regulations.
 - c. That they have begun or expect to begin to use or manufacture as an intermediate or final product or by-product any toxic pollutant which was not reported in the permit application.

5. The permittee shall compare all sampling results to the following benchmark monitoring concentration. The benchmark concentrations are intended to be generic pollutant levels that, under nearly all scenarios, are protective of water quality standards and are only to be used to evaluate the overall effectiveness of the SWPPP (Storm Water Pollution Prevention Plan – see part I.B). The Benchmark Monitoring concentration may be subject to change by permit modification to be consistent with future revisions to EPA and/ or State benchmarks:

Parameter	Benchmark Concentration
	(mg/l)
Nitrate + Nitrite Nitrogen	0.68

Any quarterly exceedances of the benchmark concentration shall trigger a reevaluation of the implementation of the existing Storm Water Pollution Prevention Plan (SWPPP) and facility operations to determine if there are possible problems with non-structural BMPs or maintenance that can be corrected. The SWPPP shall be promptly revised in response to these reevaluations and in no case later than thirty (30) calendar days following the receipt of monitoring results that exceed the benchmark concentrations. A report of the permittee's comparison of monitoring results with the benchmark concentrations shall be submitted with each DMR. If the permittee exceeds any of the benchmark concentrations during the monitoring period the report shall include a detailed description of the possible causes of the exceedances or of any significant increases in parameter concentrations, the dates and scopes of inspections, a summary of monitoring results and visual inspections, and any modifications made to the SWPPP to reduce the pollutant levels.

On a yearly basis, the permittee shall calculate the annual average of all sampling data for each pollutant for the previous calendar year (January 1 – December 31). If the annual average exceeds the applicable benchmark concentration, then the permittee shall perform a detailed review of all storm water controls, BMPs, SOP's, and maintenance schedules contained in the SWPPP and shall make reasonable amendments to reduce the pollutant levels in the discharge. These amendments shall be submitted to the Department of Environmental Management - Office of Water Resources with the annual Comprehensive Site Evaluation Report required under Part I.B.5.c.(9). If the amendments will include changes to structural controls, the report must include a schedule for the implementation of the proposed structural modifications. Proposed changes to structural storm water controls must be approved by the DEM prior to implementation. Upon DEM approval of the structural changes, the permittee shall implement them in accordance with the approved schedule.

- 6. This permit serves as the State's Water Quality Certificate for the discharges described herein.
- 7. This permit does not authorize the discharge of concrete truck bottle wash water to surface waters.
- 8. The washing of truck engine compartments and undercarriages is prohibited.
- 9. The direct or indirect discharge of detergents to surface waters is prohibited.

B. STORM WATER POLLUTION PREVENTION PLAN REQUIREMENTS

1. Within thirty (30) days from the date of issuance of this permit, Hopkins Hill Sand and Stone shall submit a revised Storm Water Pollution Prevention Plan (referred to herein as the "SWPPP" or the "Plan") that addresses all of the requirements of this permit, including but not limited to the requirements from Part I.B.5.d-f. This SWPPP shall be subject to DEM review and approval, in accordance with Part I.B.3.

- 2. The Plan shall be signed by the permittee in accordance with RIPDES Regulations (250-RICR-150-10.1.12) and retained on-site.
- 3. If the Plan is reviewed by the Director, he or she may notify the permittee at any time that the Plan does not meet one or more of the minimum requirements of this part. After such notification from the Director, the permittee shall make changes to the Plan and shall submit to the Director a written certification that the requested changes have been made. Unless otherwise provided by the Director, the permittee shall have thirty (30) days after such notification to make the necessary changes.
- 4. The permittee shall promptly, and in no case later than thirty (30) calendar days, amend the Plan whenever there is a change in design, construction, operation, or maintenance, which has a significant effect on the potential for the discharge of pollutants to the waters of the State; a release of reportable quantities of hazardous substances and oil; or if the SWPPP proves to be ineffective in achieving the general objectives of controlling pollutants in storm water discharges (based upon exceedances of effluent limitations in Part I.A., exceedances of benchmark concentration in Part I.A.5, or the results of inspections required in Part I.B.5.c of this permit). Changes must be noted and then submitted to this department. Amendments to the Plan may be reviewed by DEM in the same manner as Part I.B.3. of this permit.
- 5. The SWPPP shall include, at a minimum, the following items:
 - a. <u>Description of Potential Pollutant Sources</u>. The Plan must provide a description of potential sources which may be reasonably expected to add significant amounts of pollutants to storm water discharges or which may result in the discharge of pollutants during dry weather from separate storm sewers draining the facility. It must identify all activities and significant materials, which may potentially be significant pollutant sources. The Plan shall include:
 - (1) A site map indicating: a delineation of the drainage area of outfall 001, each existing structural control measure to reduce pollutants in storm water runoff, locations where significant materials are exposed to storm water, locations where significant leaks or spills have occurred, a delineation of all impervious surfaces, all surface water bodies, all separate storm sewers, and the locations of the following activities where such areas are exposed to storm water: fueling stations, vehicle and equipment maintenance and/or cleaning areas, material handling areas, material storage areas, process areas, and waste disposal areas;
 - (2) A topographic map extending one-quarter of a mile beyond the property boundaries of the facility;
 - (3) An estimate of the overall runoff coefficient for the site, determined by an acceptable method, such as, but not limited to, area weighting;
 - (4) A narrative description of significant materials that have been treated, stored, or disposed of in a manner to allow exposure to storm water between the time of three (3) years prior to the issuance of this permit to the present; method of on-site storage or disposal; materials management practices employed to minimize contact of these materials with storm water runoff between the time of three (3) years prior to the issuance of this permit and the present; materials loading and access areas; the location and description of existing structural and non-structural control measures to reduce pollutants in storm water runoff; and description of any treatment the storm water receives:

- (5) A list of significant spills and significant leaks of toxic or hazardous pollutants that occurred at the facility three (3) years prior to the effective date of this permit to the present;
- (6) A list of any pollutants limited in effluent guidelines to which a facility is subject under 40 CFR Subchapter N, any pollutants listed on a RIPDES permit to discharge process water, and any information required under the requirements of the Regulations for the Rhode Island Pollutant Discharge Elimination System (250-RICR-150-10-1.11.I) or 40 CFR 122.21(g)(iii)-(v);
- (7) For each area of the facility that generates storm water discharges associated with industrial activity with a reasonable potential for containing significant amounts of pollutants, a prediction of the direction of flow and an estimate of the types of pollutants, which are likely to be present in storm water associated with industrial activity;
- (8) A summary of existing sampling data describing pollutants in storm water discharges from the facility; and
- b. <u>Storm Water Management Controls.</u> The permittee must develop a description of storm water management controls appropriate for the facility and implement such controls. The appropriateness for implementing controls listed in the Plan must reflect identified potential sources of pollutants at the facility. The description of storm water management controls must address the following minimum components, including a schedule for implementing such controls:
 - (1) Pollution Prevention Team. The Plan must identify a specific individual(s), by name or title, within the facility organization as members of a team that are responsible for developing the Plan and assisting the plant manager in its implementation, maintenance, and revision. The Plan must clearly identify the responsibilities of each team member. The activities and responsibilities of the team must address all aspects of facility's Plan.
 - (2) Risk Identification and Assessment/Material Inventory. The Plan must assess the potential of various sources which contribute pollutants to storm water discharge associated with the industrial activity. The Plan must include an inventory of the types of materials handled. Each of the following must be evaluated for the reasonable potential for contributing pollutants to runoff: loading and unloading operations, outdoor manufacturing or processing activities, significant dust or particulate generating processes, and on-site waste disposal practices. Factors to consider include the toxicity of chemicals; quantity of chemicals produced, or discharged; the likelihood of contact with storm water, and the history of significant leaks or spills of toxic or hazardous pollutants.
 - (3) Preventative Maintenance. A preventative maintenance program must involve inspection and maintenance of storm water management devices (i.e., oil/water separators, catch basins) as well as inspecting and testing plant equipment and systems to uncover conditions that could cause breakdown or failures resulting in discharges of pollutants to surface waters.
 - (4) Good Housekeeping. Good housekeeping requires the maintenance of a clean, orderly facility. The permittee must keep all exposed areas of the facility in a clean, orderly manner where such exposed areas could contribute pollutants to storm water discharges. Common problem areas include: around trash containers, storage areas and loading docks. Measures must also include: a schedule for regular pickup and disposal of garbage and waste materials; routine inspections for leaks and

conditions of drums, tanks and containers.

- Spill Prevention and Response Procedure: The permittee must minimize (5)the potential for leaks, spills and other releases that may be exposed to stormwater and develop plans for effective response to such spills if or when they occur. At a minimum the permittee must implement a) procedures for plainly labeling containers (e.g., "Used Oil", "Spent Solvents", "Fertilizers and Pesticides", etc.) that could be susceptible to spillage or leakage to encourage proper handling and facilitate rapid response if spills or leaks occur; b) preventative measures such as barriers between material storage and traffic areas, secondary containment provisions, and procedures for material storage and handling; c) procedures for expeditiously stopping, containing, and cleaning up leaks. spills, and other releases. Employees who may cause, detect, or respond to a spill or leak must be trained in these procedures and have necessary spill response equipment available. If possible, one of these individuals should be a member of the stormwater Pollution Prevention Team (see Part I.B.5.b.1); and d) procedures for notification of appropriate facility personnel, emergency response agencies, and regulatory agencies. Where a leak, spill, or other release containing a hazardous substance or oil requires the activation of the facility's response plan, the permittee must notify the DEM and take appropriate action to stop or minimize a release of Hazardous Material posing an Imminent Hazard and/or any on-going spill of Hazardous Material at the time of discovery. Local requirements may necessitate reporting of spills or discharges to local emergency response, public health, or drinking water supply agencies. Contact information must be in locations that are readily accessible and available. Measures for cleaning up hazardous material spills or leaks must be consistent with applicable RCRA regulations at 40 CFR Part 264 and 40 CFR Part 265.
- (6) Management of Runoff. The permittee must describe the traditional stormwater management practices (permanent structural BMPs other than those which control the generation or source(s) of pollutants that currently exist or that are planned for the facility). These types of BMPs typically are used to divert, infiltrate, reuse, or otherwise reduce pollutants in storm water discharges from the site. All BMPs that the permittee determines are reasonable and appropriate, or are required by a State or local authority; must be implemented and maintained. Factors to consider when the permittee is selecting appropriate BMPs should include: 1) the industrial materials and activities that are exposed to storm water, and the associated pollutant potential of those materials and activities; and 2) the beneficial and potential detrimental effects on surface water quality, ground water quality, receiving water base flow (dry weather stream flow), and physical integrity of receiving waters.

Structural measures should be placed on upland soils, avoiding wetlands and floodplains, if possible. Structural BMPs may require a separate permit under section 404 of the CWA before installation begins.

- (7) Sediment and Erosion Prevention. The Plan must identify areas which; due to topography, activities, or other factors; have a high potential for significant soil erosion and identify measures to limit erosion.
- (8) Employee Training: The permittee must describe the storm water employee training program for the facility. The description should include the topics covered, such as spill response, good housekeeping and material management practices, and must identify periodic dates (e.g.,

every 6 months during the months of July and January) for such training. The permittee must provide employee training for all employees that work in areas where industrial materials or activities are exposed to storm water, and for employees that are responsible for implementing activities identified in the SWPPP (e.g., inspectors, maintenance people). The employee training should inform them of the components and goals of the SWPPP.

- (9) Visual Inspections. Qualified plant personnel must be identified to inspect designated equipment and plant areas. Material handling areas must be inspected for evidence of, or the potential for, pollutants entering the drainage system. A tracking or follow up procedure must be used to ensure that the appropriate action has been taken in response to the inspection. Records of inspections must be maintained on site for at least five (5) years.
- (10) Recordkeeping and Internal Reporting Procedures. Incidents such as spills, or other discharges, along with other information describing the quality and quantity of storm water discharges must be included in the records. All inspections and maintenance activities must be documented and maintained on site for at least five (5) years.
- (11) *Minimizing Exposure:* Where practicable, industrial materials and activities should be protected by a storm resistant shelter to prevent exposure to rain, snow, snowmelt, or runoff.
- (12) Other Controls: Off-site Vehicle Tracking of Sediments. Each site shall have graveled access entrance and exit drives and parking areas to reduce the tracking of sediment onto public or private roads.

c. Site Inspection.

- (1) Visual inspections of sediment basins must be conducted within 24 hours after all rainstorms which produce more than 0.5" of rainfall, or a minimum of weekly. During periods of continuous rain and/or melting, erosion control measures shall be inspected daily.
- (2) The following inspection must be conducted on at least a semi-annual basis: sediment accumulation in all silt ponds must be measured every six (6) months and/or whenever there is a failure of sediment controls. Sediment accumulation must be removed when the sediment depth in the basin reaches 2/3 of the available storage area.
- An annual site inspection must be conducted by appropriate personnel named in the SWPPP to verify that the description of potential pollutant sources required under Part I.B.5.b.2 is accurate, that the drainage map has been updated or otherwise modified to reflect current conditions, and controls to reduce pollutants in storm water discharges associated with industrial activity identified in the Plan are being implemented and are adequate. A tracking or follow up procedure must be used to ensure that the appropriate action has been taken in response to the inspection. Records documenting significant observations made during the site inspection must be retained as part of the SWPPP for a minimum of five (5) years.
- (4) Inspect any straw/hay bale barriers weekly to ensure that the integrity of the barriers have not been breached and to check sediment accumulation. Sediment must be removed from behind the barriers when its

accumulation reaches 1/2 the height of the barriers.

- (5) Inspect riprap after each major storm event, for the first year after the placement of the riprap, to ensure that stone has not been dislodged and that scouring of the support material has not occurred. If the first year inspections verify the integrity of the riprap placement, inspection frequency can be reduced to annually.
- (6) Inspect earthen berms and sediment traps weekly to ensure that the structural integrity of the berms/traps has not been damaged.
- (7) Inspect the outfalls and discharge locations weekly for evidence of a release of sediment or other pollutants to ensure that their structural integrity has not been breached.
- (8) Inspect locations where vehicles entrance and exit the site weekly for sediment that has been tracked off site. If there is evidence that sediment has been tracked off site, the permittee shall sweep the paved surfaces and determine if the controls require improvement.
- (9)Comprehensive site evaluation: An annual comprehensive site evaluation report must be prepared which summarizes the results of the site inspections, required under Part I.B.5.c. This report must include the names of the personnel who conducted the inspections, any major or recurring observations noted in the inspections, any maintenance preformed on the erosion and sedimentation control measures, a summary of the results of all sediment soundings, and a tabulated summary of all turbidity monitoring. The Annual Comprehensive Site Evaluation report must be submitted to the Department of Environmental Management by January 15 of the following year. The report shall include an updated site plan, unless there have been no changes to the layout (e.g. locations of equipment and buildings, including tenant buildings, and configuration of quarry and processing equipment) of the site in the prior 12 months. If there have been no changes the layout of the site in the prior 12 months, submitting an updated site plan is not required, however a statement indicating that no changes have been made to the layout of the site must be summitted with the comprehensive site evaluation report. The first report is due January 15, 2023.

d. Additional Technology - Based Effluent Limits for the Concrete Plant Activities

(1) Good Housekeeping Measures. With good housekeeping, prevent or minimize the discharge of spilled cement, aggregate (including sand or gravel), kiln dust, fly ash, settled dust, or other significant material in stormwater. The permittee must also prevent the exposure of fine granular solids (cement, fly ash, kiln dust, etc.) to stormwater, where practicable, by storing these materials in enclosed silos, hoppers, or buildings, or under other covering.

e. Technology-Based Effluent Limits for Clearing, Grading, and Excavation Activities

- (1) Management Practices for Clearing, Grading, and Excavation Activities.
 - (a) Selecting and installing control measures. For all areas affected by clearing, grading, and excavation activities, the permittee must select, design, install, and implement control measures that meet applicable effluent limits.

- (b) Good Housekeeping. Litter, debris, and chemicals must be prevented from becoming a pollutant source in stormwater discharges.
- (c) Retention and Detention of Stormwater Runoff. For drainage locations serving more than one acre, sediment basins and/or temporary sediment traps should be used. At a minimum, silt fences, vegetative buffer strips, or equivalent sediment controls are required for all down slope boundaries (and for those side slope boundaries deemed appropriate as dictated by individual site conditions) of the development area unless a sediment basin providing storage for a calculated volume of runoff from a 2-year, 24-hour storm or 3,600 cubic feet of storage per acre drained is provided.
- (2) Inspection of Clearing, Grading, and Excavation Activities.
 - (a) Inspection Frequency. Inspections must be conducted either at least once every 7 calendar days or at least once every 14 calendar days and within 24 hours of the end of a storm event of 0.5 inches or greater. Inspection frequency may be reduced to at least once every month if the entire site is temporarily stabilized, if runoff is unlikely due to winter conditions (e.g., site is covered with snow, ice, or the ground is frozen).
 - (b) Location of Inspections. Inspections must include all areas of the site disturbed by clearing, grading, and/or excavation activities and areas used for storage of materials that are exposed to precipitation. Sedimentation and erosion control measures implemented must be observed to ensure proper operation. Discharge locations must be inspected to ascertain whether erosion control measures are effective in preventing significant impacts to waters of the United States, where accessible. Where discharge locations are inaccessible, nearby downstream locations must be inspected to the extent that such inspections are practicable. Locations where vehicles enter or exit the site must be inspected for evidence of significant off-site sediment tracking.
 - (c) *Inspection Reports.* For each inspection required above, the permittee must complete an inspection report.

f. Additional Technology-Based Effluent Limits

- (1) Employee Training. Conduct employee training at least annually.
- (2) Stormwater Controls. Apart from the control measures the permittee implements to meet the effluent limits, where necessary to minimize pollutant discharges, implement the following control measures at the site. The potential pollutants identified in the SWPPP shall determine the priority and appropriateness of the control measures selected.
 - (a) Stormwater Diversions. Diverting stormwater away from potential pollutant sources. Following are some control measure options: interceptor or diversion controls (e.g., dikes, swales, curbs, or berms); pipe slope drains; subsurface drains; conveyance systems (e.g., channels or gutters, open-top box culverts, and

- waterbars; rolling dips and road sloping; roadway surface water deflector and culverts); or their equivalents.
- (b) Capping: When capping is necessary to minimize pollutant discharges in stormwater, identify the source being capped and the material used to construct the cap.
- (c) *Treatment:* If treatment of stormwater (e.g., chemical or physical systems, oil and water separators, artificial wetlands) is necessary to protect water quality, describe the type and location of treatment used.
- g. <u>Consistency with Other Plans.</u> Storm water management controls may reflect requirements for Spill Prevention Control and Counter-measure (SPCC) plans under Section 311 of the CWA or Best Management Practices (BMP) Programs otherwise required by a RIPDES permit and may incorporate any part of such plans into the SWPPP by reference.

C. **DETECTION LIMITS**

All analyses of parameters under this permit must comply with the National Pollutant Discharge Elimination System (NPDES): Use of Sufficiently Sensitive Test Methods for Permit Applications and Reporting rule. Only sufficiently sensitive test methods may be used for analyses of parameters under this permit. The permittee shall assure that all wastewater testing required by this permit, is performed in conformance with the method detection limits listed below (the EPA method is noted for reference, other EPA approved methods found in 40 CFR Part 136 may be utilized). In accordance with 40 CFR Part 136, EPA approved analysis techniques, quality assurance procedures and quality control procedures shall be followed for all reports required to be submitted under the RIPDES program. These procedures are described in "Methods for the Determination of Metals in Environmental Samples" (EPA/600/4-91/010) and "Methods for Chemical Analysis of Water and Wastes" (EPA/600/4-79/020).

The report entitled "Methods for the Determination of Metals in Environmental Samples" includes a test which must be performed in order to determine if matrix interferences are present, and a series of tests to enable reporting of sample results when interferences are identified. Each step of the series of tests becomes increasingly complex, concluding with the complete Method of Standard Additions analysis. The analysis need not continue once a result which meets the applicable quality control requirements has been obtained. Documentation of all steps conducted to identify and account for matrix interferences shall be submitted along with the monitoring reports.

If, after conducting the complete Method of Standard Additions analysis, the laboratory is unable to determine a valid result, the laboratory shall report "could not be analyzed". Documentation supporting this claim shall be submitted along with the monitoring report. If valid analytical results are repeatedly unobtainable, DEM may require that the permittee determine a method detection limit (MDL) for their effluent or sludge as outlined in 40 CFR Part 136, Appendix B.

Therefore, all sample results shall be reported as: an actual value, "could not be analyzed", less than the reagent water MDL, or less than an effluent or sludge specific MDL. The effluent or sludge specific MDL must be calculated using the methods outlined in 40 CFR Part 136, Appendix B. Samples which have been diluted to ensure that the sample concentration will be within the linear dynamic range shall not be diluted to the extent that the analyte is not detected. If this should occur the analysis shall be repeated using a lower degree of dilution.

When calculating sample averages for reporting on discharge monitoring reports (DMRs):

- 1. "could not be analyzed" data shall be excluded, and shall not be considered as failure to comply with the permit sampling requirements;
- 2. results reported as less than the MDL shall be reported as zeros

LIST OF TOXIC POLLUTANTS

The following list of toxic pollutants has been designated pursuant to Section 307(a)(1) of the Clean Water Act. The Method Detection Limits (MDLs) represent the required Rhode Island MDLs.

Valatila	s - EPA Method 624	MDL ug/l (ppb)	19P	PCB-1254	0.298

** No Rhode Island Department of Environmental Management (RIDEM) MDL

NOTE:

All MDLs have been established in accordance with the definition of "Detection Limits" in the RIDEM Water Quality Regulations for Water Pollution Control. Unless otherwise noted the MDLs have been determined in reagent water by the Rhode Island Department of Health, Division of Laboratories. The MDL for a given analyte may vary with the type of sample. MDLs which are determined in reagent water may be lower than those determined in wastewater due to fewer matrix interferences. Wastewater is variable in composition and may therefore contain substances (interferents) that could affect MDLs for some analytes of interest. Variability in instrument performance can also lead to inconsistencies in determinations of MDLs.

¹Method detection limits for these metals analyses were determined by the USEPA. They are not contrived values and should be obtainable with any satisfactory atomic absorption spectrophotometer. To insure valid data the analyst must analyze for matrix interference effects and if detected treat accordingly using either successive dilution matrix modification or method of Standard Additions (Methods for Chemical Analysis of Water and Wastes EPA-600/4-79/020).

^{***} Not a priority pollutant as designated in the 1997 Water Quality Regulations (Table 5)

D. MONITORING AND REPORTING

1. Monitoring

All monitoring required by this permit shall be done in accordance with sampling and analytical testing procedures specified in 40 CFR Part 136 unless other procedures are explicitly required in the permit.

2. Reporting

Unless otherwise specified in this permit, the permittee shall submit reports, requests, and information and provide notices in the manner described in this section.

a. Submittal of DMRs Using NetDMR

The permittee shall submit its monitoring data in discharge monitoring reports (DMRs) to DEM electronically using NetDMR per the following schedule:

Quarter Testing to be Performed	Report Due No Later Than	Results Submitted on DMR for
January 1 - March 31 April 1 - June 30	April 15 July 15	January 1 - March 31 April 1 - June 30
July 1 - September 30	October 15	July 1 - September 30
October 1 - December 31	January 15	October 1- December 31

When the permittee submits DMRs using NetDMR, it is not required to submit hard copies of DMRs to DEM.

b. Submittal of Reports as NetDMR Attachments

Unless otherwise specified in this permit, the permittee must submit electronic copies of documents in NetDMR that are directly related to the DMR. These include the following:

- DMR Cover Letters
- Below Detection Limit summary tables
- Benchmark Comparisons required under Part I.A.5

c. Submittal of Reports in Hard Copy Form

The following notifications and reports shall be submitted as hard copy with a cover letter describing the submission. These reports shall be signed and dated originals submitted to DEM.

- (1) Annual Comprehensive Site Inspection Report required under Part I.B.5.c.(9)
- (2) Written notifications required under Part II
- (3) Notice of unauthorized discharges

This information shall be submitted to DEM at the following address:

Rhode Island Department of Environmental Management RIPDES Program 235 Promenade Street Providence, Rhode Island 02908

d. Verbal Reports and Verbal Notifications

Any verbal reports or verbal notifications, if required in Parts I and/or II of this permit, shall be made to the DEM. This includes verbal reports and notifications which require reporting within 24 hours. (See Part II.(I)(5) General Requirements for 24-hour reporting) Verbal reports and verbal notifications shall be made to DEM at (401) 222-4700 or (401) 222-3070 at night.

PART II TABLE OF CONTENTS

GENERAL REQUIREMENTS

- (a) Duty to Comply
- (b) Duty to Reapply
- (c) Need to Halt or Reduce Not a Defense
- (d) Duty to Mitigate
- (e) Proper Operation and Maintenance
- (f) Permit Actions
- (g) Property Rights
- (h) Duty to Provide Information
- (i) Inspection and Entry
- (j) Monitoring and Records
- (k) Signatory Requirements
- (l) Reporting Requirements
- (m) Bypass
- (n) Upset
- (o) Change in Discharge
- (p) Removed Substances
- (q) Power Failures
- (r) Availability of Reports
- (s) State Laws
- (t) Other Laws
- (u) Severability
- (v) Reopener Clause
- (w) Confidentiality of Information
- (x) Best Management Practices
- (y) Right of Appeal

DEFINITIONS

GENERAL REQUIREMENTS

(a) Duty to Comply

The permittee must comply with all conditions of this permit. Any permit noncompliance constitutes a violation of Chapter 46-12 of the Rhode Island General Laws and the Clean Water Act (CWA) and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application.

- (1) The permittee shall comply with effluent standards or prohibitions established under Section 307(a) of the CWA for toxic pollutants within the time provided in the regulations that establish these standards or prohibitions, even if the permit has not yet been modified to incorporate the requirement.
- (2) The CWA provides that any person who <u>violates</u> a permit condition implementing Sections 301, 302, 306, 307, 308, 318, or 405 of the CWA is subject to a civil penalty not to exceed \$10,000 per day of such violation. Any person who willfully or negligently violates permit conditions implementing Sections 301, 302, 306, 307 or 308 of the Act is subject to a fine of not less than \$2,500 nor more than \$25,000 per day of violation, or by imprisonment of not more than 1 year, or both.
- (3) Chapter 46-12 of the Rhode Island General Laws provides that any person who violates a permit condition is subject to a civil penalty of not more than \$5,000 per day of such violation. Any person who willfully or negligently violates a permit condition is subject to a criminal penalty of not more than \$10,000 per day of such violation and imprisonment for not more than 30 days, or both. Any person who knowingly makes any false statement in connection with the permit is subject to a criminal penalty of not more than \$5,000 for each instance of violation or by imprisonment for not more than 30 days, or both.

(b) <u>Duty to Reapply</u>

If the permittee wishes to continue an activity regulated by this permit after the expiration date of this permit, the permittee must apply for and obtain a new permit. The permittee shall submit a new application at least 180 days before the expiration date of the existing permit, unless permission for a later date has been granted by the Director. (The Director shall not grant permission for applications to be submitted later than the expiration date of the existing permit.)

(c) Need to Halt or Reduce Not a Defense

It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

(d) Duty to Mitigate

The permittee shall take all reasonable steps to minimize or prevent any discharge in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

(e) <u>Proper Operation and Maintenance</u>

The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with the conditions of this permit. Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures, and, where applicable, compliance with DEM "Rules and Regulations Pertaining to the Operation and Maintenance of Wastewater Treatment Facilities" and "Rules and Regulations Pertaining to the Disposal and Utilization of Wastewater Treatment Facility Sludge." This provision requires the operation of back-up or auxiliary facilities or similar systems only when the operation is necessary to achieve compliance with the conditions of the permit.

(f) Permit Actions

This permit may be modified, revoked and reissued, or terminated for cause, including but not limited to: (1) Violation of any terms or conditions of this permit; (2) Obtaining this permit by misrepresentation or failure to disclose all relevant facts; or (3) A change in any conditions that requires either a temporary or permanent reduction or elimination of the authorized discharge. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.

(g) Property Rights

This permit does not convey any property rights of any sort, or any exclusive privilege.

(h) Duty to Provide Information

The permittee shall furnish to the Director, within a reasonable time, any information which the Director may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with this permit. The permittee shall also furnish to the Director, upon request, copies of records required to be kept by this permit.

(i) Inspection and Entry

The permittee shall allow the Director, or an authorized representative, upon the presentation of credentials and other documents as may be required by law, to:

- (1) Enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;
- (2) Have access to and copy, at reasonable times any records that must be kept under the conditions of this permit;
- (3) Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices or operations regulated or required under this permit; and

(4) Sample or monitor any substances or parameters at any location, at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the CWA or Rhode Island law.

(j) <u>Monitoring and Records</u>

- (1) Samples and measurements taken for the purpose of monitoring shall be representative of the volume and nature of the discharge over the sampling and reporting period.
- (2) The permittee shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings from continuous monitoring instrumentation, copies of all reports required by this permit, and records of all data used to complete the application for this permit, for a period of at least 5 years from the date of the sample, measurement, report or application. This period may be extended by request of the Director at any time.
- (3) Records of monitoring information shall include:
 - (i) The date, exact place, and time of sampling or measurements;
 - (ii) The individual(s) who performed the sampling or measurements;
 - (iii) The date(s) analyses were performed;
 - (iv) The individual(s) who performed the analyses;
 - (v) The analytical techniques or methods used; and
 - (vi) The results of such analyses.
- (4) Monitoring must be conducted according to test procedures approved under 40 CFR Part 136 and applicable Rhode Island regulations, unless other test procedures have been specified in this permit.
- (5) The CWA provides that any person who falsifies, tampers with, or knowingly renders inaccurate, any monitoring device or method required to be maintained under this permit shall upon conviction, be punished by a fine of not more than \$10,000 per violation or by imprisonment for not more than 6 months per violation or by both. Chapter 46-12 of the Rhode Island General Laws also provides that such acts are subject to a fine of not more than \$5,000 per violation, or by imprisonment for not more than 30 days per violation, or by both.
- (6) Monitoring results must be reported on a Discharge Monitoring Report (DMR).
- (7) If the permittee monitors any pollutant more frequently than required by the permit, using test procedures approved under 40 CFR Part 136, applicable State regulations, or as specified in the permit, the results of this monitoring shall be included in the calculation and reporting of the data submitted in the DMR.

(k) Signatory Requirement

All applications, reports, or information submitted to the Director shall be signed and certified in accordance with 250-RICR-150-10-1.12 of the Rhode Island Pollutant Discharge Elimination System (RIPDES) Regulations. Rhode Island General Laws, Chapter 46-12 provides that any person who knowingly makes any false statement, representation, or certification in any record or other document submitted or required to be maintained under this permit, including monitoring reports or reports of compliance or noncompliance shall, upon conviction, be punished by a fine of not more than \$5,000 per violation, or by imprisonment for not more than 30 days per violation, or by both.

(l) Reporting Requirements

- (1) <u>Planned changes</u>. The permittee shall give notice to the Director as soon as possible of any planned physical alterations or additions to the permitted facility.
- (2) <u>Anticipated noncompliance.</u> The permittee shall give advance notice to the Director of any planned changes in the permitted facility or activity which may result in noncompliance with the permit requirements.
- (3) <u>Transfers.</u> This permit is not transferable to any person except after written notice to the Director. The Director may require modification or revocation and reissuance of the permit to change the name of the permittee and incorporate such other requirements as may be necessary under State and Federal law.
- (4) <u>Monitoring reports.</u> Monitoring results shall be reported at the intervals specified elsewhere in this permit.
- (5) Twenty-four hour reporting. The permittee shall immediately report any noncompliance which may endanger health or the environment by calling DEM at (401) 222-4700 or (401) 222-3070 at night.

A written submission shall also be provided within five (5) days of the time the permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance.

The following information must be reported immediately:

- (i) Any unanticipated bypass which causes a violation of any effluent limitation in the permit; or
- (ii) Any upset which causes a violation of any effluent limitation in the permit; or
- (iii) Any violation of a maximum daily discharge limitation for any of the pollutants specifically listed by the Director in the permit.

The Director may waive the written report on a case-by-case basis if the oral report has been received within 24 hours.

- (6) Other noncompliance. The permittee shall report all instances of noncompliance not reported under paragraphs (1), (2), and (5), of this section, at the time monitoring reports are submitted. The reports shall contain the information required in paragraph (1)(5) of the section.
- (7) Other information. Where the permittee becomes aware that it failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or in any report to the Director, they shall promptly submit such facts or information.

(m) Bypass

"Bypass" means the intentional diversion of waste streams from any portion of a treatment facility.

(1) <u>Bypass not exceeding limitations.</u> The permittee may allow any bypass to occur which does not cause effluent limitations to be exceeded, but only if it also is for essential maintenance to assure efficient operation. These bypasses are not subject to the provisions of paragraphs (2) and (3) of this section.

(2) <u>Notice.</u>

- (i) <u>Anticipated bypass.</u> If the permittee knows in advance of the need for a bypass, it shall submit prior notice, if possible at least ten (10) days before the date of the bypass.
- (ii) <u>Unanticipated bypass.</u> The permittee shall submit notice of an unanticipated bypass as required in 250-RICR-150-10-1.14(R) of the RIPDES Regulations.

(3) Prohibition of bypass.

- (i) Bypass is prohibited, and the Director may take enforcement action against a permittee for bypass, unless:
 - (A) Bypass was unavoidable to prevent loss of life, personal injury, or severe property damage, where "severe property damage" means substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production;
 - (B) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate backup equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and
 - (C) The permittee submitted notices as required under paragraph (2) of this section.

(ii) The Director may approve an anticipated bypass, after considering its adverse effects, if the Director determines that it will meet the three conditions listed above in paragraph (3)(i) of this section.

(n) <u>Upset</u>

"Upset" means an exceptional incident in which there is unintentional and temporary noncompliance with technology-based permit effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.

- (1) Effect of an upset. An upset constitutes an affirmative defense to an action brought for noncompliance with such technology-based permit effluent limitations if the requirements of paragraph (2) of this section are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, is final administrative action subject to judicial review.
- (2) <u>Conditions necessary for a demonstration of upset.</u> A permittee who wishes to establish the affirmative defense of upset shall demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that:
 - (a) An upset occurred and that the permittee can identify the cause(s) of the upset;
 - (b) The permitted facility was at the time being properly operated;
 - (c) The permittee submitted notice of the upset as required in 250-RICR-150-10-1.14(R) of the RIPDES Regulations; and
 - (d) The permittee complied with any remedial measures required under 250-RICR-150-10-1.14(E) of the RIPDES Regulations.
- (3) <u>Burden of proof.</u> In any enforcement proceeding the permittee seeking to establish the occurrence of an upset has the burden of proof.

(o) Change in Discharge

All discharges authorized herein shall be consistent with the terms and conditions of this permit. Discharges which cause a violation of water quality standards are prohibited. The discharge of any pollutant identified in this permit more frequently than or at a level in excess of that authorized shall constitute a violation of the permit. Any anticipated facility expansions, production increases, or process modifications which will result in new, different or increased discharges of pollutants must be reported by submission of a new NPDES application at least 180 days prior to commencement of such discharges, or if such changes will not violate the effluent limitations specified in this permit, by notice, in writing, to the Director of such changes. Following such notice, the permit may be modified to specify and limit any pollutants not previously limited.

Until such modification is effective, any new or increased discharge in excess of permit limits or not specifically authorized by the permit constitutes a violation.

(p) Removed Substances

Solids, sludges, filter backwash, or other pollutants removed in the course of treatment or control of wastewaters shall be disposed of in a manner consistent with applicable Federal and State laws and regulations including, but not limited to the CWA and the Federal Resource Conservation and Recovery Act, 42 U.S.C. §§6901 et seq., Rhode Island General Laws, Chapters 46-12, 23-19.1 and regulations promulgated thereunder.

(q) <u>Power Failures</u>

In order to maintain compliance with the effluent limitation and prohibitions of this permit, the permittee shall either:

In accordance with the Schedule of Compliance contained in Part I, provide an alternative power source sufficient to operate the wastewater control facilities:

or if such alternative power source is not in existence, and no date for its implementation appears in Part I,

Halt reduce or otherwise control production and/or all discharges upon the reduction, loss, or failure of the primary source of power to the wastewater control facilities.

(r) Availability of Reports

Except for data determined to be confidential under paragraph (w) below, all reports prepared in accordance with the terms of this permit shall be available for public inspection at the DEM, 235 Promenade Street, Providence, Rhode Island 02908. As required by the CWA, effluent data shall not be considered confidential. Knowingly making any false statement on any such report may result in the imposition of criminal penalties as provided for in Section 309 of the CWA and under Section 46-12-14 of the Rhode Island General Laws.

(s) State Laws

Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties established pursuant to any applicable State law.

(t) Other Laws

The issuance of a permit does not authorize any injury to persons or property or invasion of other private rights, nor does it relieve the permittee of its obligation to comply with any other applicable Federal, State, and local laws and regulations.

(u) Severability

The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this permit, shall not be affected thereby.

(v) Reopener Clause

The Director reserves the right to make appropriate revisions to this permit in order to incorporate any appropriate effluent limitations, schedules of compliance, or other provisions which may be authorized under the CWA or State law. In accordance with 250-RICR-150-10-1.16 and 250-RICR-150-10-1.24 of the RIPDES Regulations, if any effluent standard or prohibition, or water quality standard is promulgated under the CWA or under State law which is more stringent than any limitation on the pollutant in the permit, or controls a pollutant not limited in the permit, then the Director may promptly reopen the permit and modify or revoke and reissue the permit to conform to the applicable standard.

(w) Confidentiality of Information

- (1) Any information submitted to DEM pursuant to these regulations may be claimed as confidential by the submitter. Any such claim must be asserted at the time of submission in the manner prescribed on the application form or instructions or, in the case of other submissions, by stamping the words "confidential business information" on each page containing such information. If no claim is made at the time of submission, <u>DEM may make the information available to the pubic without further notice</u>.
- (2) Claims of confidentiality for the following information will be denied:
 - (i) The name and address of any permit applicant or permittee;
 - (ii) Permit applications, permits and any attachments thereto; and
 - (iii) NPDES effluent data.

(x) Best Management Practices

The permittee shall adopt Best Management Practices (BMP) to control or abate the discharge of toxic pollutants and hazardous substances associated with or ancillary to the industrial manufacturing or treatment process and the Director may request the submission of a BMP plan where the Director determines that a permittee's practices may contribute significant amounts of such pollutants to waters of the State.

(y) Right of Appeal

Within thirty (30) days of receipt of notice of a final permit decision, the permittee or any interested person may submit a request to the Director for an adjudicatory hearing to reconsider or contest that decision. The request for a hearing must conform to the requirements of 250-RICR-150-10-1.50 of the RIPDES Regulations.

DEFINITIONS

- 1. For purposes of this permit, those definitions contained in the RIPDES Regulations and the Rhode Island Pretreatment Regulations shall apply.
- 2. The following abbreviations, when used, are defined below.

cu. M/day or M³/day

mg/l

milligrams per liter

micrograms per liter

lbs/day

kg/day

cubic meters per day

milligrams per liter

pounds per day

kilograms per day

Temp. °C temperature in degrees Centigrade
Temp. °F temperature in degrees Fahrenheit

Turb. turbidity measured by the Nephelometric

Method (NTU)

TNFR or TSS total nonfilterable residue or total

suspended solids

DO dissolved oxygen

BOD five-day biochemical oxygen demand unless

otherwise specified

TKN total Kjeldahl nitrogen as nitrogen

Total N total nitrogen

NH₃-N ammonia nitrogen as nitrogen

Total P total phosphorus

COD chemical oxygen demand

TOC total organic carbon
Surfactant surface-active agent

pH a measure of the hydrogen ion concentration

PCB polychlorinated biphenyl
CFS cubic feet per second
MGD million gallons per day
Oil & Grease Freon extractable material
Total Coliform total coliform bacteria

Fecal Coliform total fecal coliform bacteria

ml/l milliliter(s) per liter

 NO_3 -N nitrate nitrogen as nitrogen NO_2 -N nitrite nitrogen as nitrogen

NO₃-NO₂ combined nitrate and nitrite nitrogen as nitrogen

C1₂ total residual chlorine

I. <u>Proposed Action, Type of Facility, and Discharge Location</u>

Hopkins Hill Sand and Stone, LLC (HHSS) has applied to the Rhode Island Department of Environmental Management for issuance of a RIPDES Permit to discharge into the designated receiving water. The facility is located at 190 New London Turnpike in West Greenwich and is engaged in the mining and production of construction sand and gravel and in the mining and crushing limestone and granite. The discharge is to the Carr River via an unnamed Wetlands tributary to the river which receives the discharge from the facility. The discharge consists of settling basin pump down water, stone wash water, and stormwater. A site map can be found in Attachment A1, and a site map detail of the area containing the settling ponds can be found in Attachment A2.

II. Description of Discharge

HHSS occupies a 139 acre parcel of land. The land is disturbed as a result of past and present mining and processing operations. The property is in the vicinity of wetlands to the southwest, west, north, and northeast. The property is in the vicinity of the Fisherville Brook and tributaries to the south and southeast. All stormwater and process water (stone wash water) at the site flows into treatment basins, which overflow and discharge to the north of the site into an unnamed tributary to the Carr River.

According to the facility's RIPDES permit application, the facility's discharge from outfall 001 consists of a 9,600 gallons per day pump down of settling basins for maintenance purposes. In addition, the facility would discharge an estimated 77 CFS peak flow of storm water during a 10 year storm event. According to the facility's RIPDES permit application, both of these discharges are treated in the facility's settling basins.

III. Permit Limitations and Conditions

The final effluent limitations and monitoring requirements may be found in the permit.

IV. Permit Basis and Explanation of Effluent Limitation Derivation

Variances, Alternatives, and Justifications for Waivers of Application Requirements

No variances or alternatives to required standards were requested or granted.

No waivers were requested or granted for any application requirements per 40 CFR §122.21(j) or (q).

Facility Description

Treatment consists of a series of settling ponds. A process flow diagram is attached as Attachment B. The facility submitted an application for a RIPDES permit to the DEM on March 31, 2020 in response to a Notice of Violation issued by DEM on January 27, 2020. The NOV was issued to the facility for discharging without a permit. DEM responded to the March 31, 2020 permit application with a deficiency letter dated July 15, 2020. The facility resubmitted its permit application on October 8, 2020.

Receiving Water Description

The receiving water is an unnamed Wetland tributary to the Carr River. The water body segment for the Carr River and tributaries is RI0006012R-03 and is located in West Greenwich, RI.

This segment of the Carr River is designated as a warm water habitat for fisheries and has a Waterbody Classification of A. Class A waters are designated for primary and secondary contact recreational activities and fish and wildlife habitat. They shall be suitable for compatible industrial processes and cooling, hydropower, aquacultural uses, navigation, and irrigation and other

agricultural uses. These waters shall have excellent aesthetic value.

Permit Limit Development

The requirements set forth in this permit are from the State's Water Quality Regulations and the State's Regulations for the Rhode Island Pollutant Discharge Elimination System, both filed pursuant to RIGL Chapter 46-12, as amended. RIDEM's primary authority over the permit comes from EPA's delegation of the program in September 1984 under the Federal Clean Water Act (CWA).

Development of RIPDES permit limitations is a multi-step process consisting of: determining if Federal effluent guidelines apply; calculation of allowable water quality-based discharge levels based on background data and available dilution; assigning appropriate Best Professional Judgement (BPJ) based limits; comparing existing and proposed limits; comparing discharge data to proposed limits; performing an antidegradation/antibacksliding analysis to determine the final permit limits; and developing interim limits as appropriate.

Water quality criteria are comprised of numeric and narrative criteria. Numeric criteria are scientifically derived ambient concentrations developed by EPA or the State for various pollutants of concern to protect human health and aquatic life. Narrative criteria are statements that describe the desired water quality goal. A technology-based limit is a numeric limit, which is determined by examining the capability of a treatment process to reduce or eliminate pollutants.

Conventional Pollutant Permit Limitations

рН

The Effluent Guidelines for the Mineral Mining and Processing Point Source Category located at 40 CFR Part 436 establish limitations for pH for effluent discharged in conjunction with mine dewatering associated with sand and gravel production as 6.0-9.0 standard units. However, Rhode Island's water quality criteria from the Rhode Island Water Quality Regulations (250-RICR-150-05-1) are more stringent, so limitations for outfall 001 are based on the Rhode Island water quality criteria (6.5-9.0).

Total Suspended (TSS)

RIPDES Permits for similar facilities to HHS&S contain TSS limits of 45 mg/L maximum daily and 25 mg/L monthly average for outfalls that discharge rock crushing and processing wastewater. These limits are consistent with the limits for mine dewatering discharges at industrial sand and mining facilities from DEM's 2019 Multi-Sector General Permit for Stormwater Associated with Industrial Activity (MSGP). Therefore, TSS limitations of 45 mg/L daily maximum and 25 mg/L monthly average were written into HHS&S's permit for outfall 001.

Turbidity Limits

A Turbidity limitation of 5 Nephelometric Turbidity Units (NTU's) above background has been added to the permit because the facility discharges to a Class A waters. In addition, the Turbidity being discharged from the facility must not impair any existing Class A water uses, per the Rhode Island Water Quality Regulations (250-RICR-150-05-1.10.(D).(1)). The facility shall select an accessible background location and propose that location in writing to DEM within 30 days of permit issuance. Refer to Section I.A.3. of the final permit for Turbidity monitoring and reporting requirements.

Flow Limits

Facility's design flow of 49.750 MGD was calculated by adding the flow rate for annual pump down for outfall 001 listed on the permit application (9,600 gallons per day) to the 10 year storm event flow listed on the permit application for outfall 001 (77 CFS). However, no limitations were placed on average monthly flow or maximum daily flow for either outfall, in order to permit stormwater flow,

which is variable. Flow monitoring is specified for outfall 001.

Toxic Pollutant Limits

Water Quality-Based Limit (WQBEL) Calculations

The allowable effluent limitations were established on the basis of acute and chronic aquatic life criteria and human health criteria using the following: available instream dilution; an allocation factor; and background concentrations when available and/or appropriate. The aquatic life and human health criteria are specified in the Rhode Island Water Quality Regulations (250-RICR-150-05-1). Aquatic life criteria have been established to ensure the protection and propagation of aquatic life while human health criteria represent the pollutant levels that would not result in a significant risk to public health from ingestion of aquatic organisms. The more stringent of the two criteria was then used in establishing allowable effluent limitations. Details concerning the calculation of potential permit limitations, selection of factors, which influence their calculation, and the selection of final permit limitations are included below or in the attached documents.

Mixing Zones and Dilution Factors

Since the discharge from this outfall is to a wetland, which is adjacent to the Carr River, the dilution factor for the facility is 1 (i.e., no dilution).

Hardness

The hardness value used in the Water Quality calculations is a 90th percentile value based upon sitespecific data gathered by DEM in the water quality segment between 2000 and 2016.

Limits Calculations

Based on a dilution factor of 1, and the freshwater aquatic life and non-Class AA human health criteria, from the Rhode Island Water Quality Regulations, allowable discharge concentrations were established using 80% allocation for pollutants without background data, 90% allocation for pollutants with background data, and 100% allocation of total residual chlorine (TRC) due to the fact that Chlorine is not expected to be found in ambient water and it is a non-conservative pollutant.

Using the above dilution factor and hardness, the allowable discharge limits were calculated as follows:

a) Background concentration unknown or available data is impacted by sources that have not yet achieved water quality-based limits.

$$Limit_{I} = (DF) * (Criteria) * (80\%)$$

Where: DF = acute or chronic dilution factor, as appropriate

Note: The right side of this formula is divided by the appropriate metals translator when this formula is used to calculate limits for metals.

b) Using available background concentration data.

$$\mathit{Limit} = (\mathit{DF}) * (\mathit{Criteria}) * 90\% - (\mathit{Background}) * (\mathit{DF} - 1)$$

Where: DF = acute of chronic dilution factor, as appropriate

Note: The right side of this formula is divided by the appropriate metals translator when this formula is used to calculate limits for metals.

Because background concentrations were available for Cadmium, Copper, Lead, Mercury, Zinc, and Ammonia, 90% of criteria was allocated for these pollutants. All other limits were calculated using

80% allocation, due to a lack of background data. Background data for Cadmium, Copper, Lead, Mercury, Zinc, and Ammonia used in the water quality calculations was based on averages calculated from site-specific data gathered by DEM during the timespan of 2000 to 2016.

Reference Attachment C for calculations of the 90th percentile hardness, average background data, and the allowable limits based on Aquatic Life and Human Health Criteria.

The formulas and data noted above were applied with the following exceptions:

- I. Pollutants that, based on the acute and chronic dilution factors, have a higher allowable chronic limit than allowable acute limit. For this situation, both the "Monthly Average" and "Daily Maximum" limits were set at the allowable acute limit.
- II. <u>Total residual chlorine</u>. The limits for total residual chlorine (TRC) were established in accordance with the RIDEM Effluent Disinfection Policy. The "Monthly Average" and "Daily Maximum" were based on a 100% allocation, a zero background concentration, and the appropriate dilution factor(s). The 100% allocation factor for TRC was used due to the nonconservative nature of chlorine and the improbability of the receiving water having a detectable background TRC concentration.

Wasteload Allocation

Based on the above dilution factors and the freshwater aquatic life and non-Class AA human health criteria, from the Rhode Island Water Quality Regulations, allowable discharge concentrations were established using 80% allocation when no background data is available, 90% allocation when background data is available, and 100% allocation of total residual chlorine (TRC) due to the fact that Chlorine is not expected to be found in ambient water and it is a non-conservative pollutant.

In accordance with 40 CFR Part 122.4(d)(1)(iii), it is only necessary to establish limitations for those pollutants in the discharge which have the reasonable potential to cause or contribute to the exceedance of the in-stream criteria. In order to evaluate the need for permit limitations, the allowable discharge levels (permit limits) were compared to data provided in the permit application.

An assessment was made to determine if limits were necessary based on these comparisons, and no pollutants had a reasonable potential to cause a violation of water quality criteria, based on sampling data submitted in the facility's October 2020 permit application, therefore, the only pollutant with water quality-based limits is pH.

Nitrate + Nitrite

Benchmarks for Nitrate + Nitrite Nitrogen of 0.68 mg/l are incorporated into monitoring for outfall 001 based on the 2019 Rhode Island Multi-Sector General Permit for Stormwater, which specifies such benchmarks for the Sand and Gravel Mining Activities.

Perchlorate

Perchlorate monitoring for both outfalls has been incorporated into the permit based on this substance being present in rock blasting compounds.

Nutrients

Permit monitoring for Nitrogen has been incorporated into monitoring for outfall 001 due to the expectation that Nitrogen may be found in water discharged from the site due to the use of blasting compounds.

Whole Effluent Toxicity (WET) Testing

No WET testing is being required in the permit because permit conditions and permit limits are protective of the receiving water.

Antibacksliding

Provided below is a brief introduction to Antibacksliding and Antidegradation; as well as a discussion on how the two policies were used to calculate water quality-based limits.

Antibacksliding restricts the level of relaxation of water quality-based limits from the previous permit. Section 303(d)(4) of the Clean Water Act addresses antibacksliding as the following:

Section 303(d)(4)

- 1. <u>Standards not attained</u> For receiving waters that have not attained the applicable water quality standards, limits based on a TMDL or WLA can only be revised if the water quality standards will be met. This may be done by (i) determining that the cumulative effect of all such revised limits would assure the attainment of such water quality standards; or (ii) removing the designated use which is not being attained in accordance with regulations under Section 303.
- Standards attained For receiving waters achieving or exceeding applicable water quality standards, limits can be relaxed if the revision is consistent with the State's Antidegradation Policy.

Therefore, in order to determine whether backsliding is permissible, the first question that must be asked is whether or not the receiving water is attaining the water quality standard. The Office has determined the most appropriate evaluation of existing water quality is by calculating pollutant levels, which would result after the consideration of all currently valid RIPDES permit limits or historic discharge data (whichever is greater), background data (when available), and any new information (i.e., dilution factors).

Antidegradation

The DEM's "Policy on the Implementation of the Antidegradation Provisions of the Rhode Island Water Quality Regulations July 2006" (the Policy) established four tiers of water quality protection:

Tier 1. In all surface waters, existing uses and the level of water quality necessary to protect the existing uses shall be maintained and protected.

Tier 2. In waters where the existing water quality criteria exceeds the levels necessary to support the propagation of fish and wildlife and recreation in and on the water, that quality shall be maintained and protected except for insignificant changes in water quality as determined by the Director and in accordance with the Antidegradation Implementation Policy, as amended. In addition, the Director may allow significant degradation, which is determined to be necessary to achieve important economic or social benefits to the State in accordance with the Antidegradation Policy.

Tier 2½. Where high quality waters constitute Special Resource Protection Waters SRPWs¹, there shall be no measurable degradation of the existing water quality necessary to protect the characteristics which cause the waterbody to be designated a SRPW. Notwithstanding that all public drinking water supplies are SRPWs, public drinking water suppliers may undertake temporary and short-term activities within the boundary perimeter of a public drinking water supply impoundment for essential maintenance or to address emergency conditions in order to prevent adverse effect on public health or safety. These activities must comply with the requirements set forth in Tier 1 and Tier 2.

¹ SRPWs are surface waters identified by the Director as having significant recreational or ecological uses.

Tier 3. Where high quality waters constitute an Outstanding Natural Resource ONRWs², that water quality shall be maintained and protected. The State may allow some limited activities that result in temporary or short-term changes in the water quality of an ONRW. Such activities must not permanently degrade water quality or result in water quality lower than necessary to protect the existing uses in the ONRW.

The formulas previously presented ensure that permit limitations are based upon water quality criteria and methodologies established to ensure that all designated uses will be met.

In terms of the applicability of Tier 2 of the Policy, a water body is assessed as being high quality on a parameter-by-parameter basis. In accordance with Part II of the Policy, "Antidegradation applies to all new or increased projects or activities which may lower water quality or affect existing water uses. including but not limited to all 401 Water Quality Certification reviews and any new, reissued, or modified RIPDES permits." Part VI.A of the Policy indicates that it is not applicable to activities which result in insignificant (i.e., short-term minor) changes in water quality and that significant changes in water quality will only be allowed if it is necessary to accommodate important economic and social development in the area in which the receiving waters are located (important benefits demonstration). Part VI.B.4 of the Policy states that: "Theoretically, any new or increased discharge or activity could lower existing water quality and thus require the important benefits demonstration. However, DEM will: 1) evaluate applications on a case-by-case basis, using BPJ and all pertinent and available facts. including scientific and technical data and calculations as provided by the applicant; and 2) determine whether the incremental loss is significant enough to require the important benefits demonstration described below. [If not then as a general rule DEM will allocate no more than 20%.] Some of the considerations which will be made to determine if an impact is significant in each site specific decision are: 1) percent change in water quality parameter value and their temporal distribution; 2) quality and value of the resource; 3) cumulative impact of discharges and activities on water quality to date; 4) measurability of the change; 5) visibility of the change; 6) impact on fish and wildlife habitat; and 7) impact on potential and existing uses. As a general guide, any discharge or activity which consumes greater than 20% of the remaining assimilative capacity may be deemed significant and invoke full requirements to demonstrate important economic or social benefits."

In terms of a RIPDES permit, an increased discharge is defined as an increase in any limitation, which would result in an increased mass loading to a receiving water. The baseline for this comparison would be the monthly average mass loading established in the previous permit. It would be inappropriate to use the daily maximum mass loading since the Policy is not applicable to short-term changes in water quality.

For the purposes of ensuring that the revised limit is consistent with the requirements of antidegradation, existing water quality must be defined. As explained earlier, DEM evaluates existing water quality by determining the pollutant levels which would result under the design conditions appropriate for the particular criteria (i.e., background water quality, when available and/or appropriate, non-point source inputs; and existing RIPDES permit limitations or recent historical discharge data, whichever is higher). In general, available data would be used to make this determination.

Use the above-mentioned criteria, the present instream water quality C_p is defined as:

$$C_p = \frac{(DF-1) \cdot C_B + (1 \cdot C_d)}{DF}$$

where: C_b = background concentration³ C_d = discharge data⁴

² ONRWs are a special subset of high-quality water bodies, identified by the State as having significant recreational or ecological water uses.

³ Data collected at a location that is unimpacted by significant point source discharges.

⁴ Discharge data refers to the maximum of the permit limit or the historic discharge level. The historic discharge level is determined by calculating the upper 95th confidence interval for the monthly average reported data for the past five (5) years. For specific cases, changes in treatment efficiency or pretreatment limitations may support the use of an alternative period of time.

This draft permit is a new permit with no former permit limits. Therefore anti-backsliding does not apply to this permit. In addition, since the facility's discharge is an existing discharge and the facility is not proposing to discharge new effluent which would lead to further impairments or degradation of the water body compared to existing conditions, the limits contained in this permit are consistent with the Department's anti-degradation policy because they restrict the historic levels of pollutants discharged.

The remaining general and specific conditions of the permit are based on the RIPDES regulations as well as 40 CFR Parts 122 through 125 and consist primarily of management requirements common to all permits.

Table I. Proposed Permit Limits - Outfall 001

001 (Discharge from the final settling basin to the wetland area flowing into the Carr River).

Effluent Characteristic	Monthly Average	Daily Max Permit	Sampling Frequency
	Permit Limit	Limit	
Flow	MGD	MGD	1/Quarter
TSS	25 mg/L	45 mg/L	1/Quarter
рН	(6.5 S.U.)	(9.0 S.U.)	1/Quarter
Nitrate+Nitrite	mg/L	mg/L	1/Quarter
Total Nitrogen	mg/L	mg/L	1/Quarter
Perchlorate	mg/L	mg/L	1/Quarter
Turbidity	5 NTU over	5 NTU over	1/Quarter
	background	background	

⁽⁾ Values in parentheses represent the minimum and maximum values.

V. Comment Period, Hearing Requests, and Procedures for Final Decisions

All persons, including applicants, who believe any condition of the draft permit is inappropriate must raise all issues and submit all available arguments and all supporting material for their arguments in full by the close of the public comment period, to the Rhode Island Department of Environmental Management, Office of Water Resources, 235 Promenade Street, Providence, Rhode Island, 02908-5767. In accordance with Chapter 46-17.4 of Rhode Island General Laws, a public hearing will be held prior to the close of the public comment period if requested. In reaching a final decision on the draft permit the Director will respond to all significant comments and make these responses available to the public at DEM's Providence office.

Following the close of the comment period, and after a public hearing if held, the Director will issue a final permit decision and forward a copy of the final decision to the applicant and each person who has submitted written comments, provided oral testimony during the hearing, or requested notice. Within thirty (30) days following the notice of the final permit decision any interested person may submit a request for a formal hearing to reconsider or contest the final decision. Requests for formal hearings must satisfy the requirements of 250-RICR-150-10-1.50 of the Regulations for the Rhode Island Pollutant Discharge Elimination System.

⁻⁻⁻ Signifies a parameter which must be monitored and data must be reported; no limit has been established at this time.

VI. DEM Contact

Additional information concerning the permit may be obtained between the hours of 8:30 a.m. and 4:00 p.m., Monday through Friday, excluding holidays from:
