Dear Ma'am,

I, Joan Grace G. Rosaldo, a fifth year Architecture Student of the Rizal Technological University (RTU), am presently conducting an Architectural Thesis entitled: **"ECOCEANA" An Integrated Recreational Park and Marine Life Research Facility in Mabini, Batangas**. This thesis study will deliberate each and every meaning and importance of Marine ecosystem and its consequences on every individual's life and to know that every species have an important role in maintaining a well-balanced ecosystem.

The project aims to:

- Enhance and preserve the marine condition to have a healthy environment and prosperous economy for the future generations.
- Lessen the number of marine species that are endangered or threatened with extinction around the world.
- Provide learning areas / room, experimental rooms and laboratories to enrich and foster the growth our knowledge about all the aquatic life and become aware of its other uses in other fields like medicine, etc.
- Provide a healthy and appropriate tourist setting that is blended with the environment and well integrated into the landscape for the people and tourist to have an enjoyable at the same time healthy environment while appreciating our marine biodiversity and learning about it simultaneously.
- Serve as a tourist attraction at the same time as a learning area about the marine and aquatic ecosystem to prove that we can enjoy the beauty of uniqueness of each marine species by preserving it and still get educated.

In line with the subject, I kindly ask for your assistance to help create a more analytical and productive study. I hereby request your humble office for permission to conduct an ocular visit in your institution, formal interviews with associated officials, data gathering and other similar activities. Furthermore, I request to obtain the following data:

- Guidelines and Restrictions for a Marine life Research Center.
- Any related latest statistics about the marine biodiversity of the Philippines and Batangas.
- Range of the projected users of the facility.
- Any related documents that can be utilized in the study

Rest assured that any information obtained from your office will be used solely for thesis only.

I look forward to your most favourable action on this matter.

Thank you very much.
