Subject: RE: Heads Up APCD

Mat - Ronnie talks about reopening old wounds, which is incorrect. I'm over all that and want to move forward - Ronnie clearly doesn't and, in particular, neither does Will Harris who continues to cause issues behind the scenes and no doubt put together Ronnie's list. I will not agree to having the special master review all those docs that Ronnie listed - if State Parks insists on that, then APCD will have to add an equal number of our own documents to the list that counter everything Ronnie put in there. Do you really want that? I don't, and am unwilling to even consider it. The fact that he even proposed this at this juncture gives a very strong indication to me that State Parks is not serious about really solving this problem - arguing about it for 8 years seems to be the preferred approach and, as you can see, I've reached my limit.

Related to the mitigation, it's been lagging for far too long and State Parks chose to delay installation despite approval given by Coastal Commission because you had issues with their letter. That has placed me in the position of having to write an NOV for the number of exceedances we've measured as a result of inaction by State Parks. This is a significant public health issue, and I can no longer let it go.

We can talk about that on Monday if you'd like.
