Subject: ODSVRA Marine Biological Material ignored?
Date: Friday, March 16, 2018 6:51:41 PM

Hi,

My name is Ginger Schenk and I own a home in Arroyo Grande and 2 businesses Grover Beach. I absolutely love go to the OHV park with family and friends. We enjoy bonfires, riding, hiking, visiting with friends, teaching the kids to ride and work on their bikes. Incredible family bonding time that I cannot even put into words.

I am very frustrated that my favorite form of recreation is being closed piece by piece. I have read the last test reports from State Parks and APCD and it confirms by multiple sources that the problem is clearly NOT from the ODSVRA.

PLEASE investigate the validity of silica coming from the SVRA and what impact does the “marine biological material” coming from the ocean have on all the air monitoring data?

Please investigate what percentage of dust is coming from the “SVRA”.

I do not understand how this information can be ignored, because I have to be honest... We will not let you ignore the science.

It is a shame that a small group of people who should not have bought homes downwind of a large dune complex are being deceived into thinking OHV is responsible. This is wrong and the science proves it.

Please remember that 73% of the visitors to this park are “families” and that we are so incredibly lucky to be the only place in the state (I think country) that has SO many different types of outdoor recreation in ONE place. We need to embrace it vs taking it away.

Thank you for your time.
Ginger Schenk
