---

Please help save such a rare gem that tens of thousands of family and friends have enjoyed for over 60 years. I believe the air samples are squed or improperly taken. And even if they are correct motorized recreationists have little impact on it. Those dunes are there because that's where the dust drops out of the jet stream. The Bahamas are created solely by the excretions of tiny creatures that consume the iron rich dust from the Sahara!!! Google it... so there will always be more dust around Pismo than other surrounding areas. If anyone is to blame for anything it's the city planners for developing the area down wind and adjacent to SAND DUNES.

~ Thankyou John Thompson president of the MidNite Mudders 4wd club.
