Subject: Oceano dunes
Date: Monday, April 23, 2018 3:22:19 PM

To whom it may concern,

My name is Korey Dubell. I'm writing in regards to the oceano dunes closure. First, I have been going to the dunes since I was 18 years old, I am now 32, as have many of my friends and family. I served a little over five years in the military (2004-2010), on my time home from the military I would take my family to the dunes to spend quality time and much needed R&R from the horrors of war.

I've done some research and have found no evidence to supports the air pollution control districts (APCD) claims of crystalline silica coming off the dunes. There have been several tests done to test for the silica, including a test done by the ACPD which also came up with no silica. I also found videos of ACPD members lying under oath about this matter. I'm trying to understand your reasoning for closing down the dunes but I have yet to find one. If the problem is the trilogy at monarch golf community, that's absurd, for the cypress tree groves that were planted there in the past as a wind and sand barrier for already existing communities, were cut down to build the golf course. The residents of said community should of been aware of the wind and sand blowing prior to moving into a community near the ocean. As far as the silica causing the health problems in the surrounding communities, it's simply not true and there's evidence to support that. There has to be another way to support your agendas, whatever that may be,

Thank you for your time

Sincerely
Korey Dubell
