To whom it may concern

I am writing this letter in support of keeping the SVRA in Oceano open and to stop the complaints of dust caused by the off roading community. I am also concerned that the states parks is be bullied into a air pollution settlement when there is no fact to back this up. The San Luis air quality district is only taking the word of 133 individuals who bought home here after the SVRA was there. The reports facts disprove Everything they have been saying.

I have recently had the opportunity to read the reports from the testing that has been done on the dust contamination (crystalline silica ). The reports are stating that the levels of crystalline silica are not measurable or is minuet on the testing results. Also it states the the dust on the Mesa is not coming from the Oceano dunes sand, so dust control measures on the Oceano dunes seem to be a waste of time and money.

The area in question has acres of farmland between the dunes and the Mesa homes that are in questions, yet that has no been a consideration in these people complaints. Also the continued development of the mesa and the removal of the tree that used to be a natural barrier.

So with the reports that have been published which states there is no basis for their claims of said dust contamination. Therefore I believe the the air quality district has no choice but to decided in the favor of the Oceano dunes /state parks and stop wasting tax dollars chasing ghosts.
