Subject: Why?
Date: Friday, March 16, 2018 4:04:16 PM

Why do you have to keep closing down SVRA/OHV areas? For people like me, people that love the out doors, your taking our weekend release, hobby and life away. You let people tell the air quality suffers, Why do you take the money and effort your using to close down a SVRA/OHV area and put it into public transportation? Less cars on the road equal less pollution. Or help the homeless, people without homes have to have campfires for heat.

What percentage of pollution in the area comes from SRVA/OHV area? Compare that to pollution from the closest highway, town or city. How accurate are all the test? Did they collect data for a year? 2 Years?

Please, use the common sense that you I am hoping you have. Every time one place is closed because someone or some group thinks that they are right and know whats best for everyone, you hurt the community, the local town and or city.
