To all concerned:

I hear that the results air studies conducted at the ODSVRA are not completely transparent and that information was left out in support of the movement to use air quality to close the dunes. Please conduct impartial studies that will give us accurate numbers in regard to the silica coming from the dunes and what if any impact does the marine biological material from the ocean have on the monitoring data thus far. If silica is found, what percentage comes from the SVRA and what comes from the rest of the dunes that are closed to motorized vehicles? Why after all these years is State Parks caving to false information?

Not only am I a constituent I am a business with employees who's lively hood is directly impacted by dunes users, but my family and I are users and cherish the tradition of using the dunes for motorized recreation has brought us. The dunes and those that use them for family recreation were using those dunes long before homes were built in the path of the wind no one can control. The problem here isn't the motorized users, it's the developers and residents who turned a blind eye when they bought but wants revenge now. The dunes are part of the heritage of San Luis Obispo County and should remain so, in spite of the complaints of a few.

Closing of any more of the dunes for outright lies and political agenda is wrong and should have not part in the process of managing the Oceano Dunes State Vehicular Recreation Area.

Regards,

Ron Scott
