Subject: [EXT]State Parks OHV 2020 Work Plan

ATTENTION: This email originated from outside the County's network. Use caution when opening attachments or links.

Members of the Hearing Board,

I am writing to request that you take critical action in response to the current 2020 work plan offered to you by State Parks. As it is written it is just another document full of vague language and loopholes that allow SP to continue with business as usual.

Please demand revisions to the plan that include, clear specific goals, timelines and measurable outcomes. Insist they define where, when and how these will be achieved.

Let it be an actual work plan, rather than a skillful fantasy designed to appease the Board. And how about consequences? That idea was summarily rejected by the Board, but given the vagaries of the current Work Plan it clearly should be reconsidered.

And finally as a resident of the Mesa who suffers both health and social consequences from the OHV activity on the dunes, I am frankly shocked and appalled by language in the Plan about the need to minimize impacts to recreational activities. This suggested "balance" can only be rationalized by ignoring the proven damaging health consequences of PM2.5 exposure.
