Subject: Oceano dunes state park
Date: Friday, March 16, 2018 3:27:50 PM

Why is it im seeing state parks agree to dust mitigations and closures on the basis of false accusations and no scientific evidence?

The dust has been tested for the harmful crystalline silica and NO MEASURABLE AMOUNT HAS BEEN FOUND! Additionally there is scientific proof that a vast majority of the dust in question is coming from offshore sources, bacteria and plankton from the ocean have been found while testing that "dust"

There is zero proof that any of this not-so-harmful dust is even caused by off highway usage, SO WHY ARE WE VEGETATING AREAS WITH NON-NATIVE AND INVASIVE SPECIES OF PLANTS like European beach grass.

When it comes right down to it, myself and the other 1 million people who visit this park each year are not okay with losing ANY, I REPEAT, ANY MORE RIDING AREA!!!! without giving more back to us to compensate. We DO NOT pay into a state program and go through registration and fees for usage, only to be ignored and disregarded by the very organization that we have put all of our support and trust behind. Implementing these things state parks is agreeing to is going to have no positive outcome, there is no way to stop nature.
