To whom it may concern,

My name is William Wallace and I'm from Madera county. Although I may not live in San Luis Obispo county, I regularly travel to the oceano dunes several time per year for camping and day trips. I strongly believe that the current fight to force the closure of the dunes in the name of poor air quality is a front for local residents than are concerned with their property values. These individuals want to transform the easy going nature of the area into an upper class travel destination rivaling Monterey and Carmel. These individuals are doing this for personal gain and have no respect for others interest in the area.

My family has traveled to the Pismo area for over 30 years to get away from the dirty air in the valley and to hear residents complaints of poor air quality is upsetting. They don't understand what bad air really is and what the people of the central valley have to live in. I find it alarming that factual information relating to air quality studies has been hidden from public view and many past decisions by agency's like the coastal commission have been based solely on emmissions and have no regard for fact or other data laid out by third party and independent sources. The placement of air quality monitors around the county has no standard, some are in paved urban areas and others are in the middle of dirt fields. Some stations have malfunctioned and were allowed to not be maintained yet continue the study.

I ask of you to please look at this issue with a neutral mind and consider hard facts and compare findings apples to apples. I hope that my children will be able to enjoy the dunes the same way I have and my father has before.

Thank you, William Wallace.
