FAQ

Balak Palak - Wikipedia Category:2013 films Category:Marathi-language films Category:Indian films Category:Indian comedy films Category:Directorial debut films Category:2010s comedy-drama films Category:Indian comedy-drama filmsQ: how to search for objects in a container from a string I want to know whether there is a way to search within a container for an object that contains a certain value. I know there is a way to search with a key in a map, but is there an equally elegant solution when the key/value are a container that contains the object (The objects are not stored in an ordered data structure but rather the container as a linked list) I could do something like this function `search(Container $container, string $value) { foreach($container as $val) { if ($val->contains($value)) { return $val; } } return false; }` I am just concerned about efficiency. If this was in PHP it would be one line. A: `Array::contains()` is already your friend. In C++ it's also $O(1)$ as it just goes through the list. If you use the standard library you're already done So here's the deal. Six months ago I decided to go back to university. My course is writing and I'm doing 3 years including undergrad and final year, full time at a University in Dublin. Three years isn't a very long time, so I feel like I can do a pretty good job. Three quarters of the way through now I'm pretty optimistic I'll pass my exams and have two years to go. Today I had my first exam, and my mind is pretty much blown. I sit my exams with only a few weeks to go until I turn in my results, I can see exactly how much I'm going to do, the path I'm going to have to tread to get there, and yet I don't feel any sense of urgency. I'm spending a lot of time thinking "when do I need to start
