

BATCH MANAGEMENT SYSTEMS

Flexibility | Reliability | Integration

SHICK USA'S integrated batch management system is a flexible and reliable ingredient management and batch execution software solution that can be integrated with your business systems to give you a powerful production management tool.

Creating customized batch management and data collection systems is just a part of Shick's complete ingredient processing solution. By combining our practical controls experience with our knowledge of information technology, engineers in Shick's controls group use proven methods applied to the right technology to create customized controls systems for today and tomorrow.

STANDARD EQUIPMENT

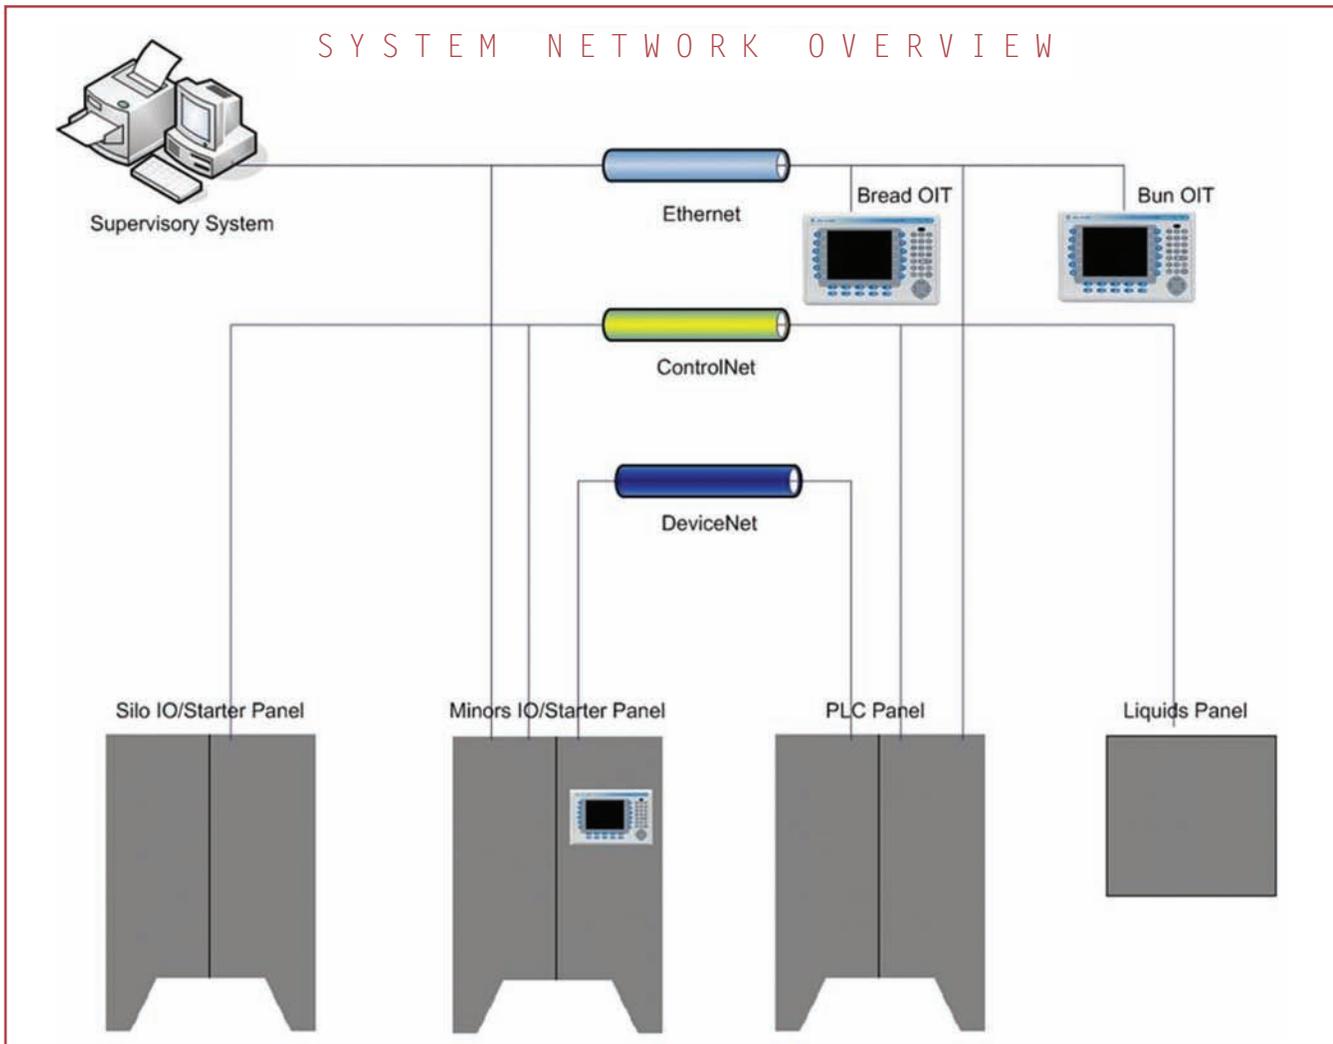

- Process Definition
- Functional Design
- Architecture & Hardware Design
- Real-Time Software Development
- Business Systems Development
- Controls Hardware Manufacturing

FUNCTIONALITY

- Recipe Management
- Batch Execution
- Ingredient Management
- Management Reporting & Analysis
- Process Data Integration
- Business System Integration

BATCH MANAGEMENT SYSTEMS

Shick engineers listen to a customer's unique business requirements in order to optimize the software. Prior to implementation, an engineer conducts a detailed review focused on your operation and users. We analyze your process environment and, if needed, provide PLC and instrumentation hardware upgrades to improve the quality of batch data. As our staff prepares to install your software, we conduct an operational review of the program. Then our experts remain on site through start-up and training. Once operational, Shick engineers utilize a remote connection to monitor the system to help the facility personnel optimize performance.

RFQ DATA

- PLC ? Allen Bradley or other, if other what _____
- over _____ VAC
- Recipe Management: Y or N # of Recipes _____
- Batch Management: Y or N
- Integration into existing system: Y or N Note: _____
- Data Recording: Y or N
 - If yes, what data _____
 - How long do they need to be kept? _____
