

# Generalized Landuse for Hardy County, WV

At the behest of the Hardy County Planning Office and the West Virginia Conservation Agency, the West Virginia GIS Technical Center developed a generalized landuse dataset for Hardy County, West Virginia. The dataset was built on parcel data for Hardy County and drew primarily on existing landuse codes stored therein. WVGISTC used these codes along with a number of derived variables to create a 17 category system. In order to give this dataset greater value in a conservation planning realm, the final set of categories divides developed land into pervious and impervious subcategories. All of the variables utilized in the development of these categories are included in linked tables.

## Hardy County Landuse by Parcel Landuse Category

- 10 - Rural Residential
- 11 - Low Density Residential
