

**FOR IMMEDIATE RELEASE**

Hudson, FL – 2gH Solutions, LLC announced today that the Washington Department of Ecology has determined that the Hydrovex TTT membrane flow regulator from Veolia Water Technologies Canada may be used as an acceptable means to meet the flow control standards established by the Department for stormwater detention facilities in Eastern and Western Washington.

"Our customers have been anxious to hear this news and are excited that they now have a greater variety of flow control solutions with wider availability and a proven track record. We are grateful to the Washington Department of Ecology for its forward thinking views on environmental technology and for establishing a process by which new and promising technologies can be evaluated. They are a model agency which other states should look to for guidance.", said Jon Moody, co-founder of 2gH Solutions, LLC.

Gianfranco Maragno, Business Development Manager, USA at Veolia Water Technologies Canada commented, "This determination provides engineers in the state of Washington access to a proven and reliable flow control solution to tackle even the toughest stormwater flow control applications. We look forward to working with 2gh Solutions to actively promote the Hydrovex TTT Membrane Flow Regulator in the Pacific Northwest."

**About 2gH Solutions, LLC**

2gH Solutions, LLC specializes in flow control technology for the stormwater industry and provides specialty consulting and engineering services related to the application of the technology. The company is dedicated to bringing the best available products to the stormwater industry along with innovative and cost effective solutions to the industry's most challenging design problems. The company was founded by Jon Moody and Raymond Bellas who are well known to the industry as being at the forefront of new technology.
