

# BREAKTHROUGH PROJECT MANAGEMENT

Process	Description
<b>Product Development/Launch Process</b>	A workshop which provides the foundation to create a product development/ launch process based on world-class principles and extensive industry benchmarking.
<b>Project Delivery Team Process</b>	World-class organizations understand and utilize effective practices to manage the introduction of new products and technology. This module supplies practices and principles of Project Delivery Teams, World-Class Project Management Principles, and execution of an effective technology transfer and start-up strategy.
<b>Task Analysis Process</b>	<p>The Task Analysis Process is a set of procedures for identifying the proper sequence of steps, knowledge, skills and tools needed to start-up, run, shut down, and/or maintain a machine safely, reliably, and cost effectively.</p> <p>SDF custom designs and facilitates the process for training participants on what a Task Analysis is, why it is important, and how to successfully conduct a Task Analysis.</p>
<b>Technology Transfer and Training Process</b>	<p>The Technology Transfer and Training (TT&amp;T) process is a formal, structured process whereby technical knowledge and operational skills are <u>transferred</u> <i>from</i> project resources <i>to</i> operating teams.</p> <p>SDF customizes the specifics of a TT&amp;T Process to fit each client’s culture and business environment using a performance-based training model to:</p> <ul style="list-style-type: none"> <li>- Select and form a Training Core Team (TCT).</li> <li>- Align TCT and PDT goals.</li> <li>- Develop a TCT Certification Process.</li> <li>- Facilitate Individual and Team Development</li> <li>- Prepare technical training</li> <li>- Ensure training and certification of operators.</li> </ul>
