PlasmaFlow™

DECLARE WAR ON OUR COMMON ENEMY

Upwards of 2 Million Americans each year are affected by DVT (Blood clots in the legs).
This results in approximately 300,000 Americans deaths annually. Our goal: ZERO.
Fight our common enemy, and win the war. PlasmaFlow, your weapon of choice.

PLASMAFLOW IS A PORTABLE SEQUENTIAL DEVICE PROVEN TO

Help prevent deep vein thrombosis (DVT) and pulmonary embolism (PE), blood clots in deep veins (such as the legs) and in the lungs

INNOVATE YOUR DVT PROTOCOL

MECHANICAL PROPHYLAXIS FOR DVT PROTOCOL MADE SIMPLE

Portable and Lightweight Increase patient compliance with a portable sequential device that eliminates the use of tubes and hoses.

Visual Verify the pressure being applied to the lower extremities.

Limited Complications Unlike prescriptive drugs, PlasmaFlow helps mitigate the risk of bleeding and does not require weekly blood monitoring.

- PlasmaFlow allows a multimodal approach for venous thromboembolism (VTE) for high-risk orthopedic surgery patients. Current board guidelines indicate that aspirin is not appropriate as the only option for the prevention of DVT.
- PlasmaFlow fits into the change in healthcare. The Deficit Reduction Act of 2005 requires hospitals to identify Hospital-Acquired Conditions. DVT and Pulmonary Embolism fall underneath this act which may result in penalties and payment reductions.
- PlasmaFlow is covered by most insurance. Private Pay Organization recognizes the significant cost savings when a patient does not have to be readmitted to a hospital. PlasmaFlow fits into protocol driven medicine.
