

## Equipment Spec Sheet: Mercedes ML63 AMG

The ML63 has 510 horsepower, self-leveling air bag suspension, rear hitch receiver, steps to access the roof and platforms that can be used for rigging. This high speed, performance vehicle is retrofitted with everything to enhance the suspension from coil over shocks, to racing stabilizer bars, to sway bars. The vehicle comes with front and rear hitch receivers, steps to access the roof, and runners that can all be used for camera platforms and rigging.

A polymer coating on the vehicle exterior was added to reduce the reflective quality of the car to protect it from extreme conditions and environments, and for the convenience of being able to stand on the car to rig without denting it. The interior is set up with four HD monitors that are all powered on board, and with the PIX recording system allowing for recording and instant playback in HD. Also available are two inverters for running 110v power and access points for multiple cable configurations on both sides. This powerful and dynamic vehicle can hit top speeds of 100+ mph; enhancing and maintaining the stable shots created by The Ultimate Arm and Lev Head.

### FEATURES AND SPECIFICATIONS:

- Retrofitted to enhance suspension
- Coil over shocks, racing stabilizers, and sway bars
- Polymer vehicle coating to reduce reflection
- Four HD monitors inside vehicle, with PIX recording system
