

# SNIPER SEGWAY

## Equipment Spec Sheet: Sniper Segway

Our Segway Camera Rig or SNIPER is a one of a kind camera vehicle designed and built right here at Peacemaker Filmworks. This off road Segway utilizes a 10-foot crane arm allowing shots from ground level up to 10 feet high, and is both mechanically and gyro stabilized.

The crane motion is dampened by a steady cam arm, and the in house designed and built 'SILENCER' head supplies 3-axis gyro stabilization. This combination creates dead steady, smooth floating shots in tight spaces and over rough terrain.

It is best described as having access to a never-ending dolly track, without having to lay the track. With no dolly track to change, going from one setup to another can be achieved in record time, and it is virtually silent, so you can take your walk and talk to places you never could before.

### FEATURES AND SPECIFICATIONS:

- Top speed of 22kph or 15mph
- Runs silent, suitable for walk and talk.
- Shots from ground level to 9 feet high
- Ronin 3 axis gyro stabilized head
- Digital image transmission
- Can handle Epic, Alexa M, or DLSR camera packages
