

Equipment Spec Sheet: Ultimate Arm

The Ultimate Arm is the first Gyro-Stabilized Camera Crane of its kind. It is the most adaptable, weather-resistant, and reliable crane on the market. With a flexible section built to absorb vibrations before they reach the image, the operator is guaranteed the smoothest shot and most stable image, even when using long lenses in off-road terrain.

The Arm has been tested in the toughest of conditions, from 130-degree heat in Death Valley to 40 below zero in Alaska, without ever losing its ability to perform complete 360 degree movement (in less than four seconds) at vehicle speeds in excess of 100 miles an hour.

If you are looking for Flexibility equalling its Durability, the Ultimate Arm is a must for your production. It fits with any Mitchell Mount Head in the industry, and comes equipped with quick-change extensions that can be retrofitted in minutes.

FEATURES AND SPECIFICATIONS:

- Gyro-Stabilized Camera Crane
- Incredibly adaptable and weather-resistant
- Vibration dampening frame construction
- Fits any Mitchell Mount Head in the industry
- Comes equipped with quick-change extensions
