

2022-2023 Illinois Corn herbicide programs Good, Better and Best

Whether using tillage or burndown herbicides, starting clean is essential to set the stage for season-long success. Spring burndown products, such as Elevore® herbicide, can be a great addition to your herbicide program. Plant-back restrictions may apply.

Foundation residuals should be applied pre-plant or pre-emergence. These herbicides provide reliable support for clean fields all season long. For all products, add appropriate burndown products, tank-mix partners, and adjuvants.

Keep your fields clean by making a post application within 21-28 days after your foundation herbicide application. Always include a residual herbicide to extend control deeper into the growing season.

Good

Keystone® NXT herbicide 1.75-2 qt
followed by
Realm® Q herbicide 4 oz
+ Durango® DMA® herbicide 32 oz
+ Atrazine 0.5-1 lbs
+ AMS 8.5-17 lbs/100 gal
