Ag Risk Management

Crop Insurance today offers...Lots of choices, if you want a crop insurance agent that can help you make choices from a farmers per-perspective contact Steve McGinn at 316-284-1935

What are the Different Types of Certifications on Seed Wheat?

BREEDER SEED is directly controlled by the originating or sponsoring plant breeding institution, firm or individual, and is the source for he production of seed of the certified classes

FOUNDATION SEED is the progeny of breeder or foundation seed produced under control of the originator or sponsoring plant breeding institution, or person , or designee thereof. As applied to certified seed, Foundation seed is a class of certified seed that is produced under procedures established by the certifying agency for the purpose of maintaining genetic purity and identity.

REGISTERED SEED is the progeny of breeder or foundation seed that is handled so as to maintain variety identity and satisfactory genetic purity and that has been certified by a certifying agency.

CERTIFIED SEED is the progeny of breeder, foundation, registered, or certified seed that is handled so as to maintain variety identity and satisfactory genetic purity and that has been certified by a certifying agency.

The Plant Variety Protection Act (PVPA) encourages the development of new varieties by providing for the protection of the intellectual property rights of the owner.

It is unlawful to sell, offer for sale or expose for sale, uncertified seed by variety name when it is a variety for which a Certificate of Plant Protection has been issued, specifying sale only as a class of certified seed.

Choosing Wheat Varieties

The first step when selecting a wheat variety is to look at several that are adapted to your region and have shown consistent performance at nearby K-State variety performance tests and demonstration plots. Other characteristics that help narrow down the possibilities are: variety, maturity, disease resistance, tolerance against the most yield-limiting factors I the region, and production system.

Maturity: It is important to select several varieties with differing maturities to spread the risk over the operation as well as to optimize harvest timing. Early-maturing varieties will most likely out-yield other varieties in years when the grain filling period turns hot and dry; while medium-late maturing varieties will benefit from growing seasons with extended grain filling period At planting time, we don't know ho the weather will turn out during grain fill, therefore, spreading the risk in your operation by selecting varieties with differing maturities is always a good idea.

Disease resistance: When selecting a wheat variety, producers should ask themselves if they are willing to budget for a foliar fungicide and spray if needed. If the answer is "yes" then there are many good variety options to choose from. If the answer is "no" they will have to narrow down their variety range, but there are still good varieties available in most cases. While some diseases, such as leaf or stripe rust are easily controlled with a foliar fungicide and producers have the option to budget for it; other diseases require more of a system's management and do not have the effective remediation. These include viral diseases such as wheat streak mosaic and barley yellow dwarf, and can also include a fungal disease such as Fusarium head blight, which is not always successfully controlled with fungicide spraying. If the latter diseases are common concerns in your operation, I suggest evaluating each variety's ratings against these constraints and selecting the ones that provide better levels of resistance.

Tolerance to abiotic factors: While acid soils area major concern in south-central Kansas, drought becomes a more limiting factor as we head west. Varieties differ in their tolerance to these abiotic stresses, and selecting a variety with better tolerance to the major limiting factor in your operation can put more bushels in the elevator.

Productions system: For producers who graze their wheat before taking it for gain, selecting a variety with good forage yield, medium to late first hollow stem, Hessian fly resistance, and good recovery from grazing are just as important as the factors described above. Additionally, wheat varieties differ in their straw strength and a few varieties should be restricted to dryland use due to their high lodging potential. History of feral rye in the field dictates the need for herbicide-resistant varieties, and also plays an important role in variety selection.

Providence	49.9	10.3	55.8

DID YOU KNOW ....

You can look at plot results in your area at www.pioneer.com/yield. Go to the website and enter your zip code and then choose to view plots within 15-100 miles of your zip code.

A map with orange flags on it will appear. Click on the flags to bring up the plot at that location to view the results.

2027 Infinity Program

25% CASH DISCOUNT — Platinum LEVEL

QUALIFIERS:
100% Pioneer
– OR –
≥10% YOY Acreage Growth*
– OR –
≥100 YOY Acres Growth
– AND –
Payment by Dec. 4, 2026

BENEFITS:
5% Pioneer CP Customer Bonus
100% Replant**
Granular Insights + Silage Staging + Fungicide Timing
Financing: **Prime - 1 @ 22%**

20% CASH DISCOUNT — Gold LEVEL

QUALIFIERS:
Retain Acres*
(90-109% of PY acres)
– AND –
Payment by Dec. 4, 2026

BENEFITS:
5% Pioneer CP Customer Bonus
75% Replant**
Granular Insights
Financing: **Prime - 1 @ 17% Discount**

15% CASH DISCOUNT — Silver LEVEL

QUALIFIERS:
Invoice and Payment by February 26, 2027

BENEFITS:
50% Replant
Granular Insights
Financing: **Prime - 1 @ 12% Discount**

***DISCOUNT LOCK:** At the end of each payment date, the system will lock the Infinity discount based on the business partner's invoice qualifications and a full payment.*

PIONEER DEFERRED PAYMENT LOAN DEADLINE

In October you will receive a final Payment Reminder and payment coupon from Pioneer. No further statements will be sent to you.

If you wish to pay off your loan prior to the due date of December 1st you will need to call 1-800-248-4030 then choose option 1 for your current payoff amount.

You can pay your loan by mailing a check to Pioneer HI-Bred or you can schedule an ACH payment on line in your pioneer.com account

Advanced AgTech Services

For All Your Precision Planting Needs

You can still drop off your meters at the Wildcat Agri-Services Warehouse and we will get them to Advanced AgTech.

Alfalfa Seed and Inoculates

Premium alfalfa is in somewhat limited quantities. If you are considering planting fall seeded alfalfa please try to let us know as soon as possible. Blended alfalfa is in good supply at present.

Don't forget RR Alfalfa is available.

Inoculates: Silage, high moisture grain, and alfalfa inoculates are also all available. All inoculates are in good supply, but some are a special order item, so plan ahead.

2026 Fall Weigh Wagon Program

This fall we will have the weigh wagon available for testing yields against both competing products, side by side comparison of Pioneer products, and yield checks. This is very important to better establish where to place hybrids in your fields. Any and all data and product results are of the utmost importance to you and to us. You may call us and we will make every effort to get to your weights in a timely manner.

As a thank you for participating in a corn or soybean test plot or side by side comparison you may choose from one of the options above. A rechargeable screwdriver, a Pioneer blanket, a Pioneer belt buckle, a Pioneer floor mat, or a Carhartt mock quarter zip sweatshirt.

Seed Planning for 2027 - Early Savings Deadline is Oct. 30th

There have been a number of you starting to discuss estimates for orders for the 2027 crop year. It is never too early to start getting with us on estimates for your cropping needs for 2027.

Some of you would have liked to have had more of certain hybrids this year and the supply was limited. The sooner we know the demand the better off we will be in attaining the supplies to fill these orders of the hybrids you desire.

Give us a call if you are interested in seed planning for 2027. Please let us know if you have interest in getting an additional 2% seed discount for 2027 by October 30th 2026.

Some Quick Thoughts

With the start of harvest comes the star of "updates from the combine>" As the combines roll, news of how each product and/or company is doing begins to spread throughout hte countryside. There are a whole host of reasons why the product may have or may not have performed to expectations or why another product may have performed better.

Be sure to ask the right questions and uncover the reasons why. Was there nitrogen loss early on with the excessive rainfall? Was the product pollinating during the hot dry spell? Was it too much water or lack of water and excess heat stress during grain-fill? Are there any compaction issues in the field? Any previous cropping/tillage history issues? Any hail or wind events in this field this year?

Agronomic issues have plagued our crops all year. Let's be sure to be out there and weigh out all the challenges of the 2025 growing season and all of the factors that have influenced that final measured yield No two years ate the same and this year will certainly not be an exception to this..
