

Corn Grain:
P0934WX

Additional Products in this Family: P0934E | P0934WX

CRM:109
Silk CRM: 108
GDUs to Silk: 1340
Phy. CRM: 107
GDUs to Phy. Mat.: 2580

Positioning For:

MANAGEMENT COMMENTS

- High yielding waxy hybrid with strong agronomics
- Stong stalks with above average roots
- Moderate resistance to foliar diseases with good resistance to diplodia ear rot
- Best adapted to more productive soils with lower likelihood of drought stress

MARKET SEGMENTS

WX: Waxy
HES: High Extractable Starch

SUITABILITY RATINGS

KEY ENVIRONMENTS

High Yield Environment	Highly Suitable
Variable Yield Environment	Suitable

SUITABILITY

Corn After Corn	Suitable
Late Harvest	Suitable

SOILS

Drought-Prone Sandy Soils	Manage Appropriately
Early Planting/Cold Soils	Suitable

IMPORTANT: Trait rating scores provide key information useful in selection and management of Pioneer® brand products in your area. Information and ratings are based on comparisons with other Pioneer brand products, not competitive products. Information and scores are assigned by Pioneer Research Managers. Scores are based on period-of-years testing through 2021 harvest and were the latest available at time of printing. Some scores may change after 2022 harvest. Scores represent an average of performance data across areas of adaptation, multiple growing conditions, and a wide range of both climate and soil types, and may not predict future results. All products within a hybrid family receive the same score unless observations indicate a significant difference. Individual product responses are variable and subject to a variety of environmental, disease and pest pressures. Please use this information as only one component of your product positioning decision. Refer to www.pioneer.com or contact a Pioneer sales professional for the latest and most complete listing of traits and scores for each Pioneer brand product and for product placement and management suggestions specific to your operation and local conditions.
