Positioning For:

MANAGEMENT COMMENTS

- Stress tolerant hybrid best placed on low fertility, clay type soils
- Carries enough yield on the top-end to earn its keep on the farm, but separates from other hybrids under stress.
- Average plant and ear height with strong stalks late into the season
- Average tolerance to GLS and NLB
- Late root strength is a consideration

REFUGE

Integrated Refuge

- 95% (YGCB, HX1, LL, RR2)
- 5% (LL, RR2)

MARKET SEGMENTS

HTF: High Total Fermentables (Dry-Grind Ethanol)
 HES: High Extractable Starch

DISEASE SCORES

Gray Leaf Spot	5
No. Leaf Blight	5
Anthr. Stalk Rot	6
Diplodia Ear Rot	5
Tar Spot	6
Gibberella Ear Rot	

TRAIT SCORE RATINGS: 9 = Excellent; 1 = Poor; Blank = Insufficient Data.

IMPORTANT: Trait rating scores provide key information useful in selection and management of Pioneer® brand products in your area. Information and ratings are based on comparisons with other Pioneer brand products, not competitive products. Information and scores are assigned by Pioneer Research Managers. Scores are based on period-of-years testing through 2021 harvest and were the latest available at time of printing. Some scores may change after 2022 harvest. Scores represent an average of performance data across areas of adaptation, multiple growing conditions, and a wide range of both climate and soil types, and may not predict future results. All products within a hybrid family receive the same score unless observations indicate a significant difference. Individual product responses are variable and subject to a variety of environmental, disease and pest pressures. Please use this information as only one component of your product positioning decision. Refer to www.pioneer.com or contact a Pioneer sales professional for the latest and most complete listing of traits and scores for each Pioneer brand product and for product placement and management suggestions specific to your operation and local conditions.
