Positioning For:

Silk CRM: 114
 GDUs to Silk: 1420
 Phy. CRM: 113
 GDUs to Phy. Mat.: 2730

MANAGEMENT COMMENTS

- Agronomic, stable, stress tolerant hybrid in the White Corn lineup.
- Recommended placement on low-to-moderate productivity soils.
- Shorter stature plant with lower ear height.
- GLS tolerance is below average and may require management.

REFUGE

Integrated Refuge

- 95% (YGCB, HX1, LL, RR2)
- 5% (LL, RR2)

MARKET SEGMENTS

HAE: High Available Energy (Monogastric Feed)
 WH: White food corn
 HTF: High Total Fermentables (Dry-Grind Ethanol)

IMPORTANT: Trait rating scores provide key information useful in selection and management of Pioneer® brand products in your area. Information and ratings are based on comparisons with other Pioneer brand products, not competitive products. Information and scores are assigned by Pioneer Research Managers. Scores are based on period-of-years testing through 2021 harvest and were the latest available at time of printing. Some scores may change after 2022 harvest. Scores represent an average of performance data across areas of adaptation, multiple growing conditions, and a wide range of both climate and soil types, and may not predict future results. All products within a hybrid family receive the same score unless observations indicate a significant difference. Individual product responses are variable and subject to a variety of environmental, disease and pest pressures. Please use this information as only one component of your product positioning decision. Refer to www.pioneer.com or contact a Pioneer sales professional for the latest and most complete listing of traits and scores for each Pioneer brand product and for product placement and management suggestions specific to your operation and local conditions.
