Sorghum-sudangrass:
877F

PIONEER®

Positioning For:

MANAGEMENT COMMENTS

Similar to other sorghum forages, appropriate management practices should be used to avoid issues with prussic acid and/or nitrates. Please refer to PIONEER FIELD FACTS entitled: "Managing Forage Sorghum and Sorghum Sudangrass."

SUITABILITY RATINGS

SUITABILITY

Silage	Suitable
Grazing	Highly Suitable
Hay	Highly Suitable
Green Chop	Suitable
High Grain Content Forage	Poor Suitability

CHARACTERISTIC SCORES

Yield for RM	9
Yield Under Stress	9
Stem Sweetness	7
Stem Juiciness	7
Regrowth Score	9
Rel. Mat.	72
Plant Height in Feet	7-9

IMPORTANT: Trait rating scores provide key information useful in selection and management of Pioneer® brand products in your area. Information and ratings are based on comparisons with other Pioneer brand products, not competitive products. Information and scores are assigned by Pioneer Research Managers. Scores are based on period-of-years testing through 2020 harvest and were the latest available at time of printing. Some scores may change after 2021 harvest. Scores represent an average of performance data across areas of adaptation, multiple growing conditions, and a wide range of both climate and soil types, and may not predict future results. All products within a hybrid family receive the same score unless observations indicate a significant difference. Individual product responses are variable and subject to a variety of environmental, disease and pest pressures. Please use this information as only one component of your product positioning decision. Refer to www.pioneer.com or contact a Pioneer sales professional for the latest and most complete listing of traits and scores for each Pioneer brand product and for product placement and management suggestions specific to your operation and local conditions.
