Massachusetts Tutorials are designed specifically for the Learning Standards found in the Massachusetts Curriculum Frameworks to prepare students for the MCAS tests.

Math Tutorials offer targeted instruction, practice and review designed to develop computational fluency, deepen conceptual understanding, and apply mathematical practices. They automatically identify and address learning gaps down to elementary-level content, using adaptive remediation to bring students to grade-level no matter where they start. Students engage with the content in an interactive, feedback-rich environment as they progress through standards-aligned modules. By constantly honing the ability to apply their knowledge in abstract and real world scenarios, students build the depth of knowledge and higher order skills required to demonstrate their mastery when put to the test.

In each module, the Learn It and Try It make complex ideas accessible to students through focused content, modeled logic and process, multi-modal representations, and personalized feedback as students reason through increasingly challenging problems. The Review It offers a high impact summary of key concepts and relates those concepts to students' lives. The Test It assesses students' mastery of the module's concepts, providing granular performance data to students and teachers after each attempt. To help students focus on the content most relevant to them, unit-level pretests and posttests can quickly identify where students are strong and where they're still learning.

Unit 1: Solving Equations and Inequalities

- **ONE-STEP EQUATIONS AND INEQUALITIES**
  - MI.A-CED.A.1: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and exponential functions with integer exponents.
  - MI.A-REI.A.1: Algebra Reasoning with Equations and Inequalities Understand solving equations as a process of reasoning and explain the reasoning. Explain each step in solving a simple linear equation as following from the equality of numbers asserted at the previous step, starting from the assumption that the original equation has a solution. Construct a viable argument to justify or refute a solution method.
  - MI.F-BF.A.1.a: Functions Building Functions Build a function that models a relationship between two quantities. Write linear and exponential functions that describe a relationship between two quantities. Determine an explicit expression, a recursive process, or steps for calculation from a context.
- **MULTI-STEP EQUATIONS AND INEQUALITIES**
  - MI.A-REI.A.1: Algebra Reasoning with Equations and Inequalities Understand solving equations as a process of reasoning and explain the reasoning. Explain each step in solving a simple linear equation as following from the equality of numbers asserted at the previous step, starting from the assumption

Copyright© Edmentum Inc. All Rights Reserved.

that the original equation has a solution. Construct a viable argument to justify or refute a solution method.

- MI.A-CED.A.1: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and exponential functions with integer exponents.

Unit 2: Axioms of Equality and Literal Equations

- **AXIOMS OF EQUALITY**
  - MI.A-REI.A.1: Algebra Reasoning with Equations and Inequalities Understand solving equations as a process of reasoning and explain the reasoning. Explain each step in solving a simple linear equation as following from the equality of numbers asserted at the previous step, starting from the assumption that the original equation has a solution. Construct a viable argument to justify or refute a solution method.
- **LITERAL EQUATIONS**
  - MI.A-CED.A.1: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and exponential functions with integer exponents.
  - MI.A-CED.A.4: Algebra Creating Equations Create equations that describe numbers or relationships. Rearrange formulas to highlight a quantity of interest, using the same reasoning (Properties of equality) as in solving equations.

Unit 3: Writing Equations and Inequalities

- **FORMULATING AND SOLVING EQUATIONS FROM WORD PROBLEMS**
  - MI.A-CED.A.1: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and exponential functions with integer exponents.
  - MI.F-BF.A.1.a: Functions Building Functions Build a function that models a relationship between two quantities. Write linear and exponential functions that describe a relationship between two quantities. Determine an explicit expression, a recursive process, or steps for calculation from a context.
  - MI.F-LE.A.2: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (including reading these from a table).
  - MI.F-LE.A.1.b: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Distinguish between situations that can be modeled with linear functions and with exponential functions. Recognize situations in which one quantity changes at a constant rate per unit interval relative to another.
  - MI.A-CED.A.3: Algebra Creating Equations Create equations that describe numbers or relationships. Represent constraints by linear equations or inequalities, and by systems of linear equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context.

Copyright© Edmentum Inc. All Rights Reserved.

- MI.F-IF.C.9: Functions Interpreting Functions Analyze functions using different representations. Translate among different representations of functions: (algebraically, graphically, numerically in tables, or by verbal descriptions). Compare properties of two functions each represented in a different way.
- MI.F-IF.B.4: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; and end behavior.
- MI.A-SSE.A.1.a: Algebra Seeing Structure in Expressions Interpret the structure of linear and exponential expressions with integer exponents. Interpret expressions that represent a quantity in terms of its context. Interpret parts of an expression, such as terms, factors, and coefficients.

- **FORMULATING AND SOLVING INEQUALITIES FROM WORD PROBLEMS**
  - MI.A-CED.A.1: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and exponential functions with integer exponents.
  - MI.A-CED.A.3: Algebra Creating Equations Create equations that describe numbers or relationships. Represent constraints by linear equations or inequalities, and by systems of linear equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context.
  - MI.A-SSE.A.1.a: Algebra Seeing Structure in Expressions Interpret the structure of linear and exponential expressions with integer exponents. Interpret expressions that represent a quantity in terms of its context. Interpret parts of an expression, such as terms, factors, and coefficients.

Unit 4: Functions

- **FUNCTIONS AND RELATIONS**
  - MI.F-IF.A.2: Functions Interpreting Functions Understand the concept of a function and use function notation. Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.
  - MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).
  - MI.F-IF.B.4: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; and end behavior.

- MI.F-IF.C.9: Functions Interpreting Functions Analyze functions using different representations. Translate among different representations of functions: (algebraically, graphically, numerically in tables, or by verbal descriptions). Compare properties of two functions each represented in a different way.
- MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).
- MI.A-CED.A.1: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and exponential functions with integer exponents.
- MI.F-LE.A.2: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (including reading these from a table).

- **DOMAIN AND RANGE**

- MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).
- MI.F-IF.B.5: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes.
- MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).
- MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).
- MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).

- MI.F-BF.A.1.a: Functions Building Functions Build a function that models a relationship between two quantities. Write linear and exponential functions that describe a relationship between two quantities. Determine an explicit expression, a recursive process, or steps for calculation from a context.

Unit 5: Graphing Linear Equations and Inequalities

- **GRAPHING AND ANALYZING LINEAR FUNCTIONS**
  - MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).
  - MI.F-LE.A.2: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (including reading these from a table).
  - MI.A-CED.A.1: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and exponential functions with integer exponents.
  - MI.F-IF.C.9: Functions Interpreting Functions Analyze functions using different representations. Translate among different representations of functions: (algebraically, graphically, numerically in tables, or by verbal descriptions). Compare properties of two functions each represented in a different way.
  - MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).
  - MI.F-IF.B.5: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes.
  - MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).
  - MI.F-IF.B.4: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; and end behavior.

Copyright© Edmentum Inc. All Rights Reserved.

- MI.F-IF.C.7.a: Functions Interpreting Functions Analyze functions using different representations. Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases. Graph linear functions and show intercepts.

- **GRAPHING AND MANIPULATING Y = MX + B**
  - MI.A-CED.A.2: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.
  - MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).
  - MI.F-IF.B.4: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; and end behavior.
  - MI.F-IF.B.6: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.
  - MI.F-IF.C.9: Functions Interpreting Functions Analyze functions using different representations. Translate among different representations of functions: (algebraically, graphically, numerically in tables, or by verbal descriptions). Compare properties of two functions each represented in a different way.
  - MI.F-IF.C.7.a: Functions Interpreting Functions Analyze functions using different representations. Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases. Graph linear functions and show intercepts.
  - MI.F-LE.A.2: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (including reading these from a table).
  - MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).

Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).
- MI.S-ID.C.7: Statistics and Probability Interpreting Categorical and Quantitative Data Interpret linear models. Interpret the slope (rate of change) and the intercept (constant term) of a linear model in the context of the data.
- MI.A-CED.A.1: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and exponential functions with integer exponents.
- MI.F-LE.A.1.b: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Distinguish between situations that can be modeled with linear functions and with exponential functions. Recognize situations in which one quantity changes at a constant rate per unit interval relative to another.
- MI.F-LE.B.5: Functions Linear, Quadratic, and Exponential Models Interpret expressions for functions in terms of the situation they model. Interpret the parameters in a linear function or exponential function (of the form f(x) = b to the x power + k) in terms of a context.

- **GRAPHS OF LINEAR INEQUALITIES**
  - MI.A-REI.D.12: Algebra Reasoning with Equations and Inequalities Represent and solve equations and inequalities graphically. Graph the solutions of a linear inequality in two variables as a half-plane (excluding the boundary in the case of a strict inequality), and graph the solution set of a system of linear inequalities in two variables as the intersection of the corresponding half-planes.
  - MI.A-CED.A.3: Algebra Creating Equations Create equations that describe numbers or relationships. Represent constraints by linear equations or inequalities, and by systems of linear equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context.

Unit 6: Linear Equations

- **SLOPE**
  - MI.F-IF.B.6: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.
  - MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the

Copyright© Edmentum Inc. All Rights Reserved.

range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).

- MI.F-IF.B.4: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; and end behavior.
- MI.F-IF.C.9: Functions Interpreting Functions Analyze functions using different representations. Translate among different representations of functions: (algebraically, graphically, numerically in tables, or by verbal descriptions). Compare properties of two functions each represented in a different way.
- MI.G-GPE.B.5: Geometry Expressing Geometric Properties with Equations Use coordinates to prove simple geometric theorems algebraically. Prove the slope criteria for parallel and perpendicular lines and use them to solve geometric problems (e.g., find the equation of a line parallel or perpendicular to a given line that passes through a given point).

- **SLOPE-INTERCEPT FORM OF A LINEAR EQUATION**
  - MI.S-ID.C.7: Statistics and Probability Interpreting Categorical and Quantitative Data Interpret linear models. Interpret the slope (rate of change) and the intercept (constant term) of a linear model in the context of the data.
  - MI.A-CED.A.1: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and exponential functions with integer exponents.
  - MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).
  - MI.F-IF.C.7.a: Functions Interpreting Functions Analyze functions using different representations. Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases. Graph linear functions and show intercepts.
  - MI.F-LE.A.2: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (including reading these from a table).
  - MI.A-REI.D.10: Algebra Reasoning with Equations and Inequalities Represent and solve equations and inequalities graphically. Understand that the graph of an equation in two variables is the set of all its

Copyright© Edmentum Inc. All Rights Reserved.

solutions plotted in the coordinate plane, often forming a curve (which could be a line). Show that any point on the graph of an equation in two variables is a solution to the equation.

- MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).

solutions plotted in the coordinate plane, often forming a curve (which could be a line). Show that any point on the graph of an equation in two variables is a solution to the equation.

- MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).
- MI.G-GPE.B.5: Geometry Expressing Geometric Properties with Equations Use coordinates to prove simple geometric theorems algebraically. Prove the slope criteria for parallel and perpendicular lines and use them to solve geometric problems (e.g., find the equation of a line parallel or perpendicular to a given line that passes through a given point).

Unit 7: Points, Lines, and Angles

- **POINTS, RAYS, LINE SEGMENTS, LINES, AND FIGURES**
  - MI.G-CO.A.1: Geometry Congruence Experiment with transformations in the plane. Know precise definitions of angle, circle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, distance along a line, and distance around a circular arc.
- **PARALLEL AND PERPENDICULAR LINES**
  - MI.G-CO.A.1: Geometry Congruence Experiment with transformations in the plane. Know precise definitions of angle, circle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, distance along a line, and distance around a circular arc.
  - MI.G-GPE.B.5: Geometry Expressing Geometric Properties with Equations Use coordinates to prove simple geometric theorems algebraically. Prove the slope criteria for parallel and perpendicular lines and use them to solve geometric problems (e.g., find the equation of a line parallel or perpendicular to a given line that passes through a given point).

Unit 8: Coordinate Geometry I

- **LENGTH AND THE DISTANCE FORMULA**
  - MI.G-CO.A.1: Geometry Congruence Experiment with transformations in the plane. Know precise definitions of angle, circle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, distance along a line, and distance around a circular arc.
  - MI.G-GPE.B.7: Geometry Expressing Geometric Properties with Equations Use coordinates to prove simple geometric theorems algebraically. Use coordinates to compute perimeters of polygons and areas of triangles and rectangles (e.g., using the distance formula).
- **PERIMETER ON THE COORDINATE PLANE**
  - MI.G-GPE.B.7: Geometry Expressing Geometric Properties with Equations Use coordinates to prove simple geometric theorems algebraically. Use coordinates to compute perimeters of polygons and areas of triangles and rectangles (e.g., using the distance formula).

Unit 9: Coordinate Geometry II

- **AREA ON THE COORDINATE PLANE**

Copyright© Edmentum Inc. All Rights Reserved.

- MI.G-GPE.B.7: Geometry Expressing Geometric Properties with Equations Use coordinates to prove simple geometric theorems algebraically. Use coordinates to compute perimeters of polygons and areas of triangles and rectangles (e.g., using the distance formula).

- **CONJECTURES IN COORDINATE GEOMETRY**
  - MI.G-CO.A.2: Geometry Congruence Experiment with transformations in the plane. Represent transformations in the plane using, e.g., transparencies and geometry software; describe transformations as functions that take points in the plane as inputs and give other points as outputs. Compare transformations that preserve distance and angle to those that do not (e.g., translation versus horizontal stretch).

Unit 10: Transformations

- **DILATIONS, TRANSLATIONS, ROTATIONS, AND REFLECTIONS**
  - MI.G-CO.A.5: Geometry Congruence Experiment with transformations in the plane. Given a geometric figure and a rotation, reflection, or translation, draw the transformed figure using, e.g., graph paper, tracing paper, or geometry software. Specify a sequence of transformations that will carry a given figure onto another.
  - MI.G-CO.B.6: Geometry Congruence Understand congruence in terms of rigid motions. Use geometric descriptions of rigid motions to transform figures and to predict the effect of a given rigid motion on a given figure; given two figures, use the definition of congruence in terms of rigid motions to decide if they are congruent.
  - MI.G-CO.A.2: Geometry Congruence Experiment with transformations in the plane. Represent transformations in the plane using, e.g., transparencies and geometry software; describe transformations as functions that take points in the plane as inputs and give other points as outputs. Compare transformations that preserve distance and angle to those that do not (e.g., translation versus horizontal stretch).
  - MI.G-CO.A.3: Geometry Congruence Experiment with transformations in the plane. Given a rectangle, parallelogram, trapezoid, or regular polygon, describe the rotations and reflections that carry it onto itself.
  - MI.G-CO.A.4: Geometry Congruence Experiment with transformations in the plane. Develop definitions of rotations, reflections, and translations in terms of angles, circles, perpendicular lines, parallel lines, and line segments.
- **TRANSFORMATIONS ON THE COORDINATE PLANE**
  - MI.G-CO.A.2: Geometry Congruence Experiment with transformations in the plane. Represent transformations in the plane using, e.g., transparencies and geometry software; describe transformations as functions that take points in the plane as inputs and give other points as outputs. Compare transformations that preserve distance and angle to those that do not (e.g., translation versus horizontal stretch).
  - MI.G-CO.A.5: Geometry Congruence Experiment with transformations in the plane. Given a geometric figure and a rotation, reflection, or translation, draw the transformed figure using, e.g., graph paper,

tracing paper, or geometry software. Specify a sequence of transformations that will carry a given figure onto another.

- MI.G-CO.B.6: Geometry Congruence Understand congruence in terms of rigid motions. Use geometric descriptions of rigid motions to transform figures and to predict the effect of a given rigid motion on a given figure; given two figures, use the definition of congruence in terms of rigid motions to decide if they are congruent.
- MI.G-CO.A.3: Geometry Congruence Experiment with transformations in the plane. Given a rectangle, parallelogram, trapezoid, or regular polygon, describe the rotations and reflections that carry it onto itself.
- MI.G-CO.A.4: Geometry Congruence Experiment with transformations in the plane. Develop definitions of rotations, reflections, and translations in terms of angles, circles, perpendicular lines, parallel lines, and line segments.

Unit 11: Congruence and Congruence Transformations

- **TRIANGLES AND CONGRUENCE TRANSFORMATIONS**
  - MI.G-CO.B.6: Geometry Congruence Understand congruence in terms of rigid motions. Use geometric descriptions of rigid motions to transform figures and to predict the effect of a given rigid motion on a given figure; given two figures, use the definition of congruence in terms of rigid motions to decide if they are congruent.
  - MI.G-CO.B.7: Geometry Congruence Understand congruence in terms of rigid motions. Use the definition of congruence in terms of rigid motions to show that two triangles are congruent if and only if corresponding pairs of sides and corresponding pairs of angles are congruent.
  - MI.G-CO.B.8: Geometry Congruence Understand congruence in terms of rigid motions. Explain how the criteria for triangle congruence (ASA, SAS, and SSS) follow from the definition of congruence in terms of rigid motions.
- **CONGRUENCE OF OTHER POLYGONS**
  - MI.G-CO.A.5: Geometry Congruence Experiment with transformations in the plane. Given a geometric figure and a rotation, reflection, or translation, draw the transformed figure using, e.g., graph paper, tracing paper, or geometry software. Specify a sequence of transformations that will carry a given figure onto another.
  - MI.G-CO.B.6: Geometry Congruence Understand congruence in terms of rigid motions. Use geometric descriptions of rigid motions to transform figures and to predict the effect of a given rigid motion on a given figure; given two figures, use the definition of congruence in terms of rigid motions to decide if they are congruent.
  - MI.G-CO.A.2: Geometry Congruence Experiment with transformations in the plane. Represent transformations in the plane using, e.g., transparencies and geometry software; describe transformations as functions that take points in the plane as inputs and give other points as outputs. Compare transformations that preserve distance and angle to those that do not (e.g., translation versus horizontal stretch).

Copyright© Edmentum Inc. All Rights Reserved.

- MI.G-CO.A.3: Geometry Congruence Experiment with transformations in the plane. Given a rectangle, parallelogram, trapezoid, or regular polygon, describe the rotations and reflections that carry it onto itself.

Unit 12: Linear Systems

- **SOLVING SYSTEMS OF LINEAR EQUATIONS: GUESS AND CHECK**
  - MI.A-CED.A.2: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.
  - MI.A-CED.A.3: Algebra Creating Equations Create equations that describe numbers or relationships. Represent constraints by linear equations or inequalities, and by systems of linear equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context.
  - MI.F-BF.A.1.a: Functions Building Functions Build a function that models a relationship between two quantities. Write linear and exponential functions that describe a relationship between two quantities. Determine an explicit expression, a recursive process, or steps for calculation from a context.
  - MI.A-REI.C.6: Algebra Reasoning with Equations and Inequalities Solve systems of equations. Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.
- **SOLVING SYSTEMS OF LINEAR EQUATIONS: GRAPHING**
  - MI.A-CED.A.3: Algebra Creating Equations Create equations that describe numbers or relationships. Represent constraints by linear equations or inequalities, and by systems of linear equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context.
  - MI.A-REI.C.6: Algebra Reasoning with Equations and Inequalities Solve systems of equations. Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.
  - MI.A-REI.D.11: Algebra Reasoning with Equations and Inequalities Represent and solve equations and inequalities graphically. Explain why the x-coordinates of the points where the graphs of the equations y = f(x) and y = (x) intersect are the solutions of the equation f(x) = (x); find the solutions approximately, e.g., using technology to graph the functions and/or make tables of values. Include cases where f(x) and/or (x) are linear and exponential functions.
  - MI.A-REI.D.11: Algebra Reasoning with Equations and Inequalities Represent and solve equations and inequalities graphically. Explain why the x-coordinates of the points where the graphs of the equations y = f(x) and y = (x) intersect are the solutions of the equation f(x) = (x); find the solutions approximately, e.g., using technology to graph the functions and/or make tables of values. Include cases where f(x) and/or (x) are linear and exponential functions.
  - MI.A-REI.D.11: Algebra Reasoning with Equations and Inequalities Represent and solve equations and inequalities graphically. Explain why the x-coordinates of the points where the graphs of the equations y = f(x) and y = (x) intersect are the solutions of the equation f(x) = (x); find the solutions approximately, e.g., using technology to graph the functions and/or make tables of values. Include cases where f(x) and/or (x) are linear and exponential functions.

- MI.A-CED.A.2: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.

Unit 13: Solving Linear Systems Algebraically

- **SOLVING SYSTEMS OF LINEAR EQUATIONS: SUBSTITUTION**
  - MI.A-CED.A.2: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.
  - MI.A-REI.C.6: Algebra Reasoning with Equations and Inequalities Solve systems of equations. Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.
  - MI.A-CED.A.3: Algebra Creating Equations Create equations that describe numbers or relationships. Represent constraints by linear equations or inequalities, and by systems of linear equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context.
  - MI.A-REI.C.5: Algebra Reasoning with Equations and Inequalities Solve systems of equations. Prove that, given a system of two equations in two variables, replacing one equation by the sum of that equation and a multiple of the other produces a system with the same solutions.
- **SOLVING SYSTEMS OF LINEAR EQUATIONS: ELIMINATION**
  - MI.A-CED.A.2: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.
  - MI.A-REI.C.6: Algebra Reasoning with Equations and Inequalities Solve systems of equations. Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.
  - MI.A-CED.A.3: Algebra Creating Equations Create equations that describe numbers or relationships. Represent constraints by linear equations or inequalities, and by systems of linear equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context.
  - MI.A-REI.C.5: Algebra Reasoning with Equations and Inequalities Solve systems of equations. Prove that, given a system of two equations in two variables, replacing one equation by the sum of that equation and a multiple of the other produces a system with the same solutions.

Unit 14: Working with Functions

- **LINEAR VERSUS NONLINEAR FUNCTIONS**
  - MI.F-IF.B.6: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.
  - MI.F-LE.A.2: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Construct linear and exponential functions, including

Copyright© Edmentum Inc. All Rights Reserved.

arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (including reading these from a table).

- MI.F-LE.A.1.a: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Distinguish between situations that can be modeled with linear functions and with exponential functions. Prove that linear functions grow by equal differences over equal intervals, and that exponential functions grow by equal factors over equal intervals.
- MI.F-LE.A.1.b: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Distinguish between situations that can be modeled with linear functions and with exponential functions. Recognize situations in which one quantity changes at a constant rate per unit interval relative to another.
- MI.F-LE.A.1.c: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Distinguish between situations that can be modeled with linear functions and with exponential functions. Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another.
- MI.A-CED.A.1: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and exponential functions with integer exponents.
- MI.F-IF.C.9: Functions Interpreting Functions Analyze functions using different representations. Translate among different representations of functions: (algebraically, graphically, numerically in tables, or by verbal descriptions). Compare properties of two functions each represented in a different way.
- MI.F-IF.B.4: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; and end behavior.

- **LINEAR AND EXPONENTIAL PARENT FUNCTIONS**
  - MI.A-CED.A.1: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and exponential functions with integer exponents.
  - MI.F-LE.A.2: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (including reading these from a table).
  - MI.A-REI.D.10: Algebra Reasoning with Equations and Inequalities Represent and solve equations and inequalities graphically. Understand that the graph of an equation in two variables is the set of all its solutions plotted in the coordinate plane, often forming a curve (which could be a line). Show that any point on the graph of an equation in two variables is a solution to the equation.

Copyright© Edmentum Inc. All Rights Reserved.

- MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).
- MI.F-IF.B.5: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes.
- MI.F-IF.B.4: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; and end behavior.
- MI.F-IF.C.9: Functions Interpreting Functions Analyze functions using different representations. Translate among different representations of functions: (algebraically, graphically, numerically in tables, or by verbal descriptions). Compare properties of two functions each represented in a different way.
- MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).
- MI.F-IF.C.7.e: Functions Interpreting Functions Analyze functions using different representations. Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases. Graph exponential functions, showing intercepts and end behavior.
- MI.F-LE.A.1.c: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Distinguish between situations that can be modeled with linear functions and with exponential functions. Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another.

- **TRANSFORMATIONS OF THE LINEAR AND EXPONENTIAL PARENT FUNCTIONS**
  - MI.F-BF.B.3: Functions Building Functions Build new functions from existing functions. Identify the effect on the graph of replacing f(x) by f(x) + k, k f(x), f(kx), and f(x + k)for specific values of k (both positive and negative); find the value of k given the graphs. Include linear and exponential models. (Focus on vertical translations for exponential functions). Utilize technology to experiment with cases and illustrate an explanation of the effects on the graph.
  - MI.G-CO.A.2: Geometry Congruence Experiment with transformations in the plane. Represent transformations in the plane using, e.g., transparencies and geometry software; describe transformations as functions that take points in the plane as inputs and give other points as outputs.

Copyright© Edmentum Inc. All Rights Reserved.

Compare transformations that preserve distance and angle to those that do not (e.g., translation versus horizontal stretch).

- MI.G-CO.B.6: Geometry Congruence Understand congruence in terms of rigid motions. Use geometric descriptions of rigid motions to transform figures and to predict the effect of a given rigid motion on a given figure; given two figures, use the definition of congruence in terms of rigid motions to decide if they are congruent.
- MI.F-BF.B.3: Functions Building Functions Build new functions from existing functions. Identify the effect on the graph of replacing f(x) by f(x) + k, k f(x), f(kx), and f(x + k)for specific values of k (both positive and negative); find the value of k given the graphs. Include linear and exponential models. (Focus on vertical translations for exponential functions). Utilize technology to experiment with cases and illustrate an explanation of the effects on the graph.
- MI.F-BF.B.3: Functions Building Functions Build new functions from existing functions. Identify the effect on the graph of replacing f(x) by f(x) + k, k f(x), f(kx), and f(x + k)for specific values of k (both positive and negative); find the value of k given the graphs. Include linear and exponential models. (Focus on vertical translations for exponential functions). Utilize technology to experiment with cases and illustrate an explanation of the effects on the graph.
- MI.F-BF.B.3: Functions Building Functions Build new functions from existing functions. Identify the effect on the graph of replacing f(x) by f(x) + k, k f(x), f(kx), and f(x + k)for specific values of k (both positive and negative); find the value of k given the graphs. Include linear and exponential models. (Focus on vertical translations for exponential functions). Utilize technology to experiment with cases and illustrate an explanation of the effects on the graph.

Unit 15: Exponential Functions, Equations, and Inequalities

- **EXPONENTIAL FUNCTIONS**
  - MI.A-SSE.A.1.a: Algebra Seeing Structure in Expressions Interpret the structure of linear and exponential expressions with integer exponents. Interpret expressions that represent a quantity in terms of its context. Interpret parts of an expression, such as terms, factors, and coefficients.
  - MI.A-SSE.A.1.b: Algebra Seeing Structure in Expressions Interpret the structure of linear and exponential expressions with integer exponents. Interpret expressions that represent a quantity in terms of its context. Interpret complicated expressions by viewing one or more of their parts as a single entity.
  - MI.A-CED.A.1: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and exponential functions with integer exponents.
  - MI.F-LE.A.1.a: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Distinguish between situations that can be modeled with linear functions and with exponential functions. Prove that linear functions grow by equal differences over equal intervals, and that exponential functions grow by equal factors over equal intervals.
  - MI.F-IF.B.6: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. Calculate and interpret the average rate

of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.

- MI.F-LE.A.2: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (including reading these from a table).
- MI.F-LE.A.3: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Observe using graphs and tables that a quantity increasing exponentially eventually exceeds a quantity increasing linearly.
- MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).
- MI.F-IF.C.9: Functions Interpreting Functions Analyze functions using different representations. Translate among different representations of functions: (algebraically, graphically, numerically in tables, or by verbal descriptions). Compare properties of two functions each represented in a different way.
- MI.F-IF.A.1: Functions Interpreting Functions Understand the concept of a function and use function notation. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then f(x) denotes the output of f corresponding to the input x. The graph of f is the graph of the equation y = f(x).
- MI.F-IF.B.4: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; and end behavior.
- MI.F-IF.B.5: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes.
- MI.F-IF.C.7.e: Functions Interpreting Functions Analyze functions using different representations. Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases. Graph exponential functions, showing intercepts and end behavior.
- MI.F-BF.A.1.a: Functions Building Functions Build a function that models a relationship between two quantities. Write linear and exponential functions that describe a relationship between two quantities. Determine an explicit expression, a recursive process, or steps for calculation from a context.

Copyright© Edmentum Inc. All Rights Reserved.

- MI.F-LE.A.1.c: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Distinguish between situations that can be modeled with linear functions and with exponential functions. Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another.
- MI.F-LE.B.5: Functions Linear, Quadratic, and Exponential Models Interpret expressions for functions in terms of the situation they model. Interpret the parameters in a linear function or exponential function (of the form f(x) = b to the x power + k) in terms of a context.

- **EXPONENTIAL GROWTH AND DECAY**
  - MI.A-SSE.A.1.a: Algebra Seeing Structure in Expressions Interpret the structure of linear and exponential expressions with integer exponents. Interpret expressions that represent a quantity in terms of its context. Interpret parts of an expression, such as terms, factors, and coefficients.
  - MI.A-SSE.A.1.b: Algebra Seeing Structure in Expressions Interpret the structure of linear and exponential expressions with integer exponents. - MI.F-LE.B.5: Functions Linear, Quadratic, and Exponential Models Interpret expressions for functions in terms of the situation they model. Interpret the parameters in a linear function or exponential function (of the form f(x) = b to the x power + k) in terms of a context.
- MI.S-ID.B.6.a: Statistics and Probability Interpreting Categorical and Quantitative Data Summarize, represent, and interpret data on two categorical and quantitative variables. Represent data on two quantitative variables on a scatter plot, and describe how the variables are related. Fit a linear function to the data and use the fitted function to solve problems in the context of the data. Use given functions fitted to data or choose a function suggested by the context. Emphasize linear and exponential models.
- MI.F-LE.A.1.b: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Distinguish between situations that can be modeled with linear functions and with exponential functions. Recognize situations in which one quantity changes at a constant rate per unit interval relative to another.
- MI.F-LE.B.5: Functions Linear, Quadratic, and Exponential Models Interpret expressions for functions in terms of the situation they model. Interpret the parameters in a linear function or exponential function (of the form f(x) = b to the x power + k) in terms of a context.

- MI.F-LE.B.5: Functions Linear, Quadratic, and Exponential Models Interpret expressions for functions in terms of the situation they model. Interpret the parameters in a linear function or exponential function (of the form f(x) = b to the x power + k) in terms of a context.

- **SOLVING EXPONENTIAL INEQUALITIES**
  - MI.F-LE.A.2: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (including reading these from a table).
  - MI.A-SSE.A.1.b: Algebra Seeing Structure in Expressions Interpret the structure of linear and exponential expressions with integer exponents. Interpret expressions that represent a quantity in terms of its context. Interpret complicated expressions by viewing one or more of their parts as a single entity.
  - MI.A-CED.A.1: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and exponential functions with integer exponents.
  - MI.A-CED.A.2: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.
  - MI.F-LE.A.1.c: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Distinguish between situations that can be modeled with

Copyright© Edmentum Inc. All Rights Reserved.

linear functions and with exponential functions. Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another.

Unit 16: Sequences

- **SEQUENCES**
  - MI.F-IF.A.3: Functions Interpreting Functions Understand the concept of a function and use function notation. Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers.
  - MI.F-BF.A.2: Functions Building Functions Build a function that models a relationship between two quantities. Write arithmetic and geometric sequences both recursively and with an explicit formula, use them to model situations, and translate between the two forms.
  - MI.F-BF.A.1.a: Functions Building Functions Build a function that models a relationship between two quantities. Write linear and exponential functions that describe a relationship between two quantities. Determine an explicit expression, a recursive process, or steps for calculation from a context.
  - MI.F-LE.A.2: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (including reading these from a table).
- **ARITHMETIC AND GEOMETRIC SEQUENCES**
  - MI.F-BF.A.2: Functions Building Functions Build a function that models a relationship between two quantities. Write arithmetic and geometric sequences both recursively and with an explicit formula, use them to model situations, and translate between the two forms.
  - MI.F-IF.A.3: Functions Interpreting Functions Understand the concept of a function and use function notation. Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers.
  - MI.F-BF.A.1.a: Functions Building Functions Build a function that models a relationship between two quantities. Write linear and exponential functions that describe a relationship between two quantities. Determine an explicit expression, a recursive process, or steps for calculation from a context.
  - MI.F-LE.A.2: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (including reading these from a table).

Unit 17: Statistics

- **DATA ANALYSIS**
  - MI.S-ID.A.1: Statistics and Probability Interpreting Categorical and Quantitative Data Summarize, represent, and interpret data on a single count or measurement variable. Use calculators, spreadsheets, and other technology as appropriate. Represent data with plots on the real number line (dot plots, histograms, and box plots).

Copyright© Edmentum Inc. All Rights Reserved.

- MI.S-ID.A.2: Statistics and Probability Interpreting Categorical and Quantitative Data Summarize, represent, and interpret data on a single count or measurement variable. Use calculators, spreadsheets, and other technology as appropriate. Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets.
- MI.S-ID.A.3: Statistics and Probability Interpreting Categorical and Quantitative Data Summarize, represent, and interpret data on a single count or measurement variable. Use calculators, spreadsheets, and other technology as appropriate. Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers).

- **FREQUENCY TABLES**
  - MI.S-ID.B.5: Statistics and Probability Interpreting Categorical and Quantitative Data Summarize, represent, and interpret data on two categorical and quantitative variables. Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data.
  - MI.S-ID.A.3: Statistics and Probability Interpreting Categorical and Quantitative Data Summarize, represent, and interpret data on a single count or measurement variable. Use calculators, spreadsheets, and other technology as appropriate. Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers).

Unit 18: Two-Variable Data

- **SCATTERPLOTS**
  - MI.S-ID.B.6.b: Statistics and Probability Interpreting Categorical and Quantitative Data Summarize, represent, and interpret data on two categorical and quantitative variables. Represent data on two quantitative variables on a scatter plot, and describe how the variables are related. Informally assess the fit of a function by plotting and analyzing residuals.
  - MI.S-ID.B.6.c: Statistics and Probability Interpreting Categorical and Quantitative Data Summarize, represent, and interpret data on two categorical and quantitative variables. Represent data on two quantitative variables on a scatter plot, and describe how the variables are related. Fit a linear function for a scatter plot that suggests a linear association.
  - MI.S-ID.C.9: Statistics and Probability Interpreting Categorical and Quantitative Data Interpret linear models. Distinguish between correlation and causation.
  - MI.F-IF.B.6: Functions Interpreting Functions Interpret linear and exponential functions having integer exponents that arise in applications in terms of the context. Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.
  - MI.S-ID.C.7: Statistics and Probability Interpreting Categorical and Quantitative Data Interpret linear models. Interpret the slope (rate of change) and the intercept (constant term) of a linear model in the context of the data.
- **SCATTERPLOTS AND MODELING**

- MI.S-ID.B.6.b: Statistics and Probability Interpreting Categorical and Quantitative Data Summarize, represent, and interpret data on two categorical and quantitative variables. Represent data on two quantitative variables on a scatter plot, and describe how the variables are related. Informally assess the fit of a function by plotting and analyzing residuals.
- MI.S-ID.B.6.a: Statistics and Probability Interpreting Categorical and Quantitative Data Summarize, represent, and interpret data on two categorical and quantitative variables. Represent data on two quantitative variables on a scatter plot, and describe how the variables are related. Fit a linear function to the data and use the fitted function to solve problems in the context of the data. Use given functions fitted to data or choose a function suggested by the context. Emphasize linear and exponential models.
- MI.S-ID.B.6.c: Statistics and Probability Interpreting Categorical and Quantitative Data Summarize, represent, and interpret data on two categorical and quantitative variables. Represent data on two quantitative variables on a scatter plot, and describe how the variables are related. Fit a linear function for a scatter plot that suggests a linear association.
- MI.S-ID.C.8: Statistics and Probability Interpreting Categorical and Quantitative Data Interpret linear models. Compute (using technology) and interpret the correlation coefficient of a linear fit.
- MI.S-ID.C.7: Statistics and Probability Interpreting Categorical and Quantitative Data Interpret linear models. Interpret the slope (rate of change) and the intercept (constant term) of a linear model in the context of the data.
- MI.A-CED.A.1: Algebra Creating Equations Create equations that describe numbers or relationships. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and exponential functions with integer exponents.
- MI.F-LE.A.1.a: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Distinguish between situations that can be modeled with linear functions and with exponential functions. Prove that linear functions grow by equal differences over equal intervals, and that exponential functions grow by equal factors over equal intervals.
- MI.F-LE.A.1.c: Functions Linear, Quadratic, and Exponential Models Construct and compare linear and exponential models and solve problems. Distinguish between situations that can be modeled with linear functions and with exponential functions. Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another.

Unit 19: Topics in Geometry

- **MONITORING PRECISION AND ACCURACY**
  - MI.N-Q.A.1: Number and Quantity Quantities Reason quantitatively and use units to solve problems. Use units as a way to understand problems; and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.
  - MI.N-Q.A.2: Number and Quantity Quantities Reason quantitatively and use units to solve problems. Define appropriate quantities for the purpose of descriptive modeling.

- MI.N-Q.A.3: Number and Quantity Quantities Reason quantitatively and use units to solve problems. Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.

- **CONSTRUCTIONS**
  - MI.G-CO.D.12: Geometry Congruence Make geometric constructions. Make formal geometric constructions with a variety of tools and methods (compass and straightedge, string, reflective devices, paper folding, dynamic geometric software, etc.). Copying a segment; copying an angle; bisecting a segment; bisecting an angle; constructing perpendicular lines, including the perpendicular bisector of a line segment; and constructing a line parallel to a given line through a point not on the line.
  - MI.G-CO.D.13: Geometry Congruence Make geometric constructions. Construct an equilateral triangle, a square, and a regular hexagon inscribed in a circle.
