

Chemistry 1 offers a curriculum that emphasizes students' understanding of fundamental chemistry concepts while helping them acquire tools to be conversant in a society highly influenced by science and technology.

The course provides students with opportunities to learn and practice critical scientific skills within the context of relevant scientific questions. Topics include the nature of science, the importance of chemistry to society, atomic structure, bonding in matter, chemical reactions, redox reactions, electrochemistry, phases of matter, equilibrium and kinetics, acids and bases, thermodynamics, quantum mechanics, nuclear reactions, organic chemistry, and alternative energy.

Scientific inquiry skills are embedded in the direct instruction, wherein students learn to ask scientific questions, form and test hypotheses, and use logic and evidence to draw conclusions about concepts. Lab activities reinforce critical thinking, writing, and communication skills and help students develop a deeper understanding of the nature of science.

Throughout this course, students are given an opportunity to understand how chemistry concepts are applied in technology and engineering. Journal and Practice activities provide additional opportunities for students to apply learned concepts and practice their writing skills.

This course is built to state standards.

Length: Two Semesters

**Unit 1: Chemistry and Society**

**Unit 2: Atomic Structure**

**Unit 3: Bonding in Matter**

**Unit 4: Chemical Reactions**

**Unit 5: Chemistry at Work**

**Unit 6: Semester 1 Review and Exam**

**Unit 7: Energy in Matter**

**Unit 8: Equilibrium and Kinetics**

**Unit 9: Transferring Energy**

**Unit 10: Quantum and Nuclear Chemistry**

**Unit 11: Energy in Organic Molecules**

**Unit 12: Semester 2 Review and Exam**
