SARGENT 1431 Door Closer with US26 plated O arm and metal cover

General Information

- 1 Closer Spring Adjustment** (not shown)
- Effects the entire cycle of the door closer movement
 - Used to size closer for application requirements
 - Determines the amount of force with which the door closes and the amount of force required to open the door
 - Adjustable to compensate for door size and draft conditions

- 2 Backcheck valve**
- At approximately 70° of the open cycle, the Backcheck Valve begins to slow the door's motion
 - Prevents the door from slamming into the door's stop
 - Valve is used to control the intensity of the Backcheck
 - **Note:** A Positive stop is required, Backcheck cannot be used as a stop

- 3 Delayed action valve (Optional)**
- Holds the door in the open position momentarily
 - 20 second minimum hold open delay
 - The feature is available for all applications and arms
 - Beneficial when moving carts or objects thru door opening and ADA applications

- 4 Closing speed valve**
- Controls how fast the door closes to approximately 8" from the closed position

- 5 Latching speed valve**
- Controls the speed of the door during the final 8" of door swing
 - The force the door closes with is controlled by the Closer spring
 - **Note:** This adjustment is critical for door latching

CAUTION: Door Closers for Low Opening Force Applications:

Door closers installed in openings required to meet the requirements of the Americans With Disabilities Act or ANSI/BHMA Standard A117.1, when adjusted to meet those requirements, may not provide adequate closing power to dependably close and latch the door based on opening or site conditions.

ANSI STANDARDS

Arm	Type	Arm	Type
O	CO2011	PF9	CO2101
P9	CO2021	P10	CO2021
H	CO2051	PS/CPS	CO2021
PH9	CO2061	CPSH/PSH	CO2061

All are certified ANSI types including options PT4 A, B, D, E, F, G, H

Arm Leverage Adjustment

Closers using "O" arms have the provision to increase closing power by 15% by adjusting foot pivot

HOW TO SELECT THE PROPER CLOSER

THINGS TO CONSIDER

1. Size and Weight of Door

The 1431 Door Closer is non-sized so that closing force can be adjusted in the field to accommodate various door sizes and weights.

2. Interior Application

The standard application is the most efficient in terms of power and control.

3. Exterior Application

The top jamb, parallel arm application should be used. Exterior doors require greater closing forces because of draft conditions. Always place the closers out of the weather.

4. Degree of Opening

Proper arm and position on the door is most important to permit the door to open far enough to allow adequate traffic flow.

5. Function

Closers are available with hold-open or positive stop arms.

6. Special Condition

Consult factory when special hinges, overhead holders or other specialized hardware is used.

1431-O STANDARD APPLICATION

The standard application of the 1431 door closer is the most common and the most desirable. The closer mounts on the hinge (pull) side of door (except when the W Corner Bracket is used). **Note:** This application is not recommended on exterior doors swinging out, since the closer is not protected from weather. The cover projection normally limits the door opening to a maximum of 160°.

**1431 Standard Application for:**

- Interior Doors Opening In or Out
- Exterior Doors Opening In

1431 Standard Application Door Opening Range

- (Range based on Mounting Position)
- O & RO Standard Arms: 120°–180°
 - H- Hold Open Arm: 90°–180°

OLC - Low Ceiling Application Arm for Ceiling to Door Clearance of 1-1/4" – 1-1/2"

Door Top Rail Requirement

- 2-5/8" min. rail (116mm)
- For Top Rails less than 3-3/4" with window opening, the 1431-J Cover Plate is recommended

- Type, size and make of holder
- Holding position (maximum door opening)
- Submit holder template being used
- Closer application being used
- Size and type of hinge

In the case of an unusual door, frame and/or hinge conditions where regular products do not meet requirements, submit drawings and complete details specifying the degree of door openings required, the type and size of hinge and the max. door opening angle.

Through-bolting and Mortise Nuts

- When through-bolting is ordered, factory will furnish mortise nuts for use with the machine screws furnished with the closer
- Nuts are sized to accommodate 1-3/4" (44mm) standard or 1-3/8" (35mm) thick doors when specified on order
- For 2-1/4" (57mm) thick doors, longer through-bolts will be furnished with mortise nuts
- Through-bolting for 2-1/4" (57mm) thick hollow metal doors require bridge type reinforcement to prevent collapse of top rail when through-bolts are tightened

1431 DESIGNED TO AID THE PHYSICALLY CHALLENGED

The 1431 door closer is designed to meet the opening force requirements established by the American with Disabilities Act (ADA) limiting the opening force to 5 pounds for interior doors and 8 pounds for exterior doors. The closer should be installed using the alternate mounting given on the templates when used on interior doors.

CAUTION: Door Closers for Low Opening Force Applications:

Door closers installed in openings required to meet the requirements of the Americans With Disabilities Act or ANSI/BHMA Standard A117.1, when adjusted to meet those requirements, may not provide adequate closing power to dependably close and latch the door based on opening or site conditions.

INTRODUCTION TO SARGENT OVERHEAD HOLDERS AND STOPS

SARGENT overhead holders/stops are designed to protect the door and hardware from the abuse commonly found in commercial and institutional applications. With **four different series** that include **surface** or **concealed**, **standard** or **heavy duty**, SARGENT has a holder/stop for your application.

Overhead holders/stops are the most practical method of stopping a door as well as eliminating unsightly wall stops and dangerous floor stops.

Using an overhead holder/stop distributes abusive forces rather than concentrating them toward the hinge. Some door closers are available with incorporated holders/stops. These work well in most cases, but when subjected to continuous abuse can lead to frame and hinge failure. SARGENT overhead holders/stops are designed and manufactured for years of service and come with a 5 year warranty.

Note:

- Before installing a door closer, verify the accessibility, fire, and life-safety requirements that are in effect. This includes the mounting height and projection into the clear opening. Check the adopted state and local building codes and consult the Authority Having Jurisdiction (AHJ).
- To maintain the warranty and ensure proper operation of the product, follow the installation instructions & templates and install on the inside of the building.
- Consult NFPA 80 for the hinge requirements on a fire door.
- Failure to use fasteners supplied with closer may void factory warranty.
- Optional fasteners are available for a variety of applications. Consult the door and frame manufacturer to ensure the proper fasteners are used to maintain certifications.
- Sizing charts are based on 1-3/4" x 7' standard weight doors swinging to 110°. Other application conditions (e.g. larger door heights or weight) may require larger size closer. Adjusting the spring power to meet the low opening force requirements of the Americans With Disabilities Act or ANSI/BHMA Standard A117.1, may not provide adequate closing power to dependably close and latch the door in some conditions (i.e. air movement from wind gusts or building stack pressure).
