

Behavioral Healthcare Patient Room Access Door

Corridor Side

Patient Side

Fire Rated Patient Room Access Solution

Proper aesthetics can be just as important as attention to safety in behavioral health facilities. The Patient Room Access Door is modeled to provide security and dependability for healthcare facilities, with a design that is modest enough for healing environments.

Caretakers or healthcare staff may access a patient's room in case of an emergency and maintain the security needed for the facility.

The main door has the functionality of a standard in swing patient room door. The inner door can open to the corridor giving authorized personnel quick access to the patient's room.

Ceco, along with other ASSA ABLOY group companies are the first in the industry to achieve a UL10C (positive pressure) 45 minute fire rating for this type of application; once again, leading the industry.

The Ceco Patient Room Access Door is a workable solution that has aesthetic flexibility and meets required industry codes.
