Post Mounted Pulls

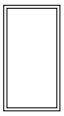

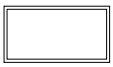

It is our goal that you get the best possible functional and aesthetic door pull from our wide selection. On long door pulls there will naturally be a small amount of flexing between mounting points that are far apart. We offer the following guidelines to help you determine when a mid-post is required or when you should consider altering the location of the mounting posts (by moving them closer together) in order to minimize the flexing of the grip. Making the grip rigid by adding a mid-post is the ideal condition for long pulls on all doors but is particularly important on all glass doors that have an inherent flexing in the door itself. The combined flexing of the door and the pull can loosen mechanical joints and stress the fasteners.

Our recommendations for adding a mid-post to long door pulls is based on a theoretical pull load of 30 lbs. (foot pounds) maximum to open the door, which is a greater than the typical force required to open an average door. The maximum amount of deflection of the grip you will see at that force is 3/8". The conditions on your job site can vary due to door weight, wind loading, closer settings, locked doors being aggressively pulled and other circumstances. It is our recommendation that you add a mid-post if there is any question about heavy or hard to open doors; having an extra mounting point always makes for a more stable and durable installation.

On long pulls, post can be positioned closer to each other and farther away from ends as a strategy to avoid mid-post if door condition permits.

Special Finishes Description

32D**MS** (MicroShield®): As part of its promise to provide innovative solutions to their customers, ASSA ABLOY Group companies offer the MicroShield® technology, a silver-based antimicrobial coating designed to inhibit the spread of germs and bacteria.

32**316** and 32D**316** are made from alloy 316 stainless steel containing molybdenum and extra nickel, giving it substantially higher corrosion resistance than the standard stainless steels typically used in door hardware. This finish is ideal for use in coastal, urban, and industrial areas that have harsh environmental conditions. 32**316** (polish) finishes offer the best corrosion resistance and should be used in caustic environments.

10BE Dark Oxidized Satin Bronze equivalent: This finish provides the richness and warmth of the 10B/613 "living" finish, but maintains its original color and appearance and will not fade or wear over time. The 10BE finish is offered by Corbin Russwin, McKinney, Norton, Rixson, Rockwood, SARGENT and Accentra, providing visual consistency between ASSA ABLOY Group brands.

*On most bronze finishes we will supply solid bronze material. Where solid bronze material is not available, we will use brass as a base material with a bronze look powder coat in its place.
***Available on select items as indicated by the finish icon throughout the catalog.
