THE X4 SECURITY SOLUTION

X4 offers a wide variety of retrofit cylinders, including SFIC. The patent life extends through 2030 and offers four times the masterkey capacity of similar-style cylinders.

Patented Key Control—Protects unauthorized duplication of your keys.

Uses Existing Hardware—Medeco offers the largest selection of retrofit cylinders, which will reduce costs by eliminating the need to replace your existing hardware.

Superior Masterkey Capabilities—Four times the masterkey ability of similar-style cylinders.

A facility's locking system is only as good as its key control. The next time you need a key duplicated, consider the risk of a security system that has no key control protection. If your keys can be copied without authorization, upgrading to patented key control like X4 will ensure your key system is protected for years to come.

WHO HAS THE KEYS TO YOUR FACILITY?

Medeco believes in giving customers the greatest control over their security. All facilities need patented key control to effectively secure exterior and interior openings. This strength of integrity allows security managers to have peace of mind when it comes to managing the system. Unfortunately, instituting a new key system is not always easy... or economical.

X4 is the most economic and efficient solution. X4 has one of the largest masterkey capabilities on the market. This allows facility managers to tie everything together under one key for ease, convenience and efficiency. Additionally, X4 easily retrofits into existing systems so installation time is minimal.

X4 is the perfect security upgrade for small format interchangeable core (SFIC) installations for Best®-style systems. X4 can also be integrated in with Prox® and iClass® systems. In addition to SFIC cylinders, X4 is available in many other retrofit cylinder formats that can be keyed into a single system.

WHAT IS THE DIFFERENCE IN LEVELS OF KEY CONTROL?

LEVEL 0	NO KEY CONTROL
LEVEL 1	PATENTED KEY CONTROL

SECURITY BEGINS WITH KEY CONTROL

LEVEL 0	NO KEY CONTROL Unpatented keys can easily be duplicated without your permission.
-------------------	--

Ordinary keys can be easily copied at any hardware or discount store. Multiple keys often become unaccounted for over time, which can allow unauthorized access, either directly or indirectly.

LEVEL 1	PATENTED KEY CONTROL Ability to duplicate keys is prohibited without authorization.
-------------------	---

Patent-protected X4 key control ensures that only designated people can duplicate keys, which effectively controls how many keys are issued and to whom keys are distributed.

ONE KEY FITS ALL

The X4 key can be masterkeyed into a system containing a variety of different lock formats to provide a one-key solution for your facility.
