and more open world

School Security Solutions

Exit Devices

Today, school administrators and facility managers are responsible not only for their students' education, but also with providing a safe and secure learning environment. Unauthorized individuals must be kept out of the building while students and staff can move freely about. While there are many factors that contribute to a safe learning environment, appropriate door hardware is key.

Keeping Exits Secure

On top of the responsibility of creating an atmosphere for learning, today's school administrators and facility managers must also provide a safe and secure environment. Keeping unauthorized individuals out while allowing students and staff to move freely is key.

Selecting the right door hardware begins with an evaluation of each school and each opening. Needs must be weighed against the benefits and challenges of each solution. Fire and life safety codes, and compliance with ADA must be considered. Doors with exit devices or "panic bars" are of special concern. Typically used on the perimeter, these doors tend to take the most abuse and are also the first line of defense against intruders.

Typical scenarios include:

- Door remains locked throughout the day
- Door remains unlocked EXCEPT in an emergency situation
- Door locks are controlled by a central location
- Door is monitored and alarms if opened

ASSA ABLOY ACCENTRA™: Dependability and Safety

As each school makes its determination about what classroom security means, you can rest assured that Yale has at least one solution to get the job done. There is a multitude of functionality available for exit devices. Many Yale products were developed specifically for school settings and provide unique functionality to keep students and staff safe and mobile.

ACCENTRA manufactures a full line of affordable exit devices providing the best combination of simplicity, strength, durability, aesthetics and innovation.

The ACCENTRA 7000 Series Exit Device is an excellent choice for schools with its proven durability and strength. And, it provides the additional security options needed to keep students and staff safe.

The ASSA ABLOY Group is the global leader in access solutions. Every day, we help billions of people experience a more open world.

ASSA ABLOY Opening Solutions leads the development within door openings and products for access solutions in homes, businesses and institutions. Our offering includes doors, frames, door and window hardware, mechanical and smart locks, access control and service.

ACCENTRA

ASSA ABLOY

SquareBolt® Security Deadbolt

The patented SquareBolt® security deadbolt (Pat. no. 5,605,362) is designed for maximum holding power and provides an improved physical barrier over standard rim latchbolts. Door rattling and shaking are resisted, therefore significantly reducing the threat of unauthorized entry.

Door Position Switch

ASSA ABLOY ACCENTRA offers an integrated door position switch to provide assurance that the door is secure. Available with electrified exit devices, this switch sends a notification to the monitoring system when the door is out of position.

Lumi-Lite® Photoluminescent Option

The Lumi-Lite® illuminated exit device increases the visibility of exit locations in dark or smoke filled passages, supplementing existing codes for egress lighting.

Double Cylinder Function

ASSA ABLOY ACCENTRA offers a double cylinder function for mortise and rim 7000 Series exit devices. This function allows the outside trim to be locked from the inside cylinder. Available as a cylinder on the inside chassis, this function provides a quick, easy way to lock the outside trim without opening the door. The latch will also retract when using a key on the outside trim (Nightlatch / 03 Function).

Other Exit Device Security Options

Latchbolt Monitor Switch (S)

The latch monitor provides true, tamper resistant latchbolt monitoring. The monitor switch is activated when the rail is depressed or for any reason that the latch moves.

Alarmed Exit (A)

The Alarmed Exit option is designed for areas requiring a stand-alone alarm on outswinging doors. This option sounds immediately upon exit and discourages unauthorized use.

Lever Monitoring (O)

ACCENTRA offers monitoring for outside levers as well. Available as an option for our electrified devices, the lever monitoring option sends a signal when the outside lever is rotated for entry.
