

Glass Box Track Sliding System (SGS)

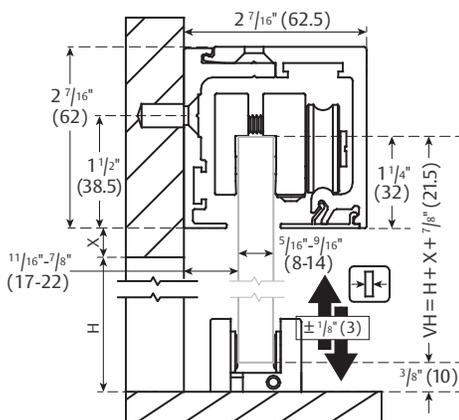

Experience a safer
and more open world

L = Clear Opening
A = Glass Width
B = Track length

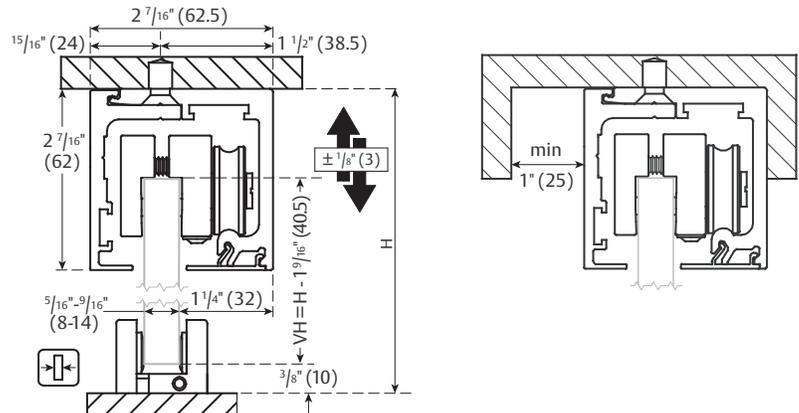

WARNING: Must be installed into blocking.
If you have questions about what type of blocking is required, consult a structural engineer.
Ensure that track assembly attachment locations will align after track has been cut to length.
When cutting track to length, insure that all burrs and sharp edges are removed.

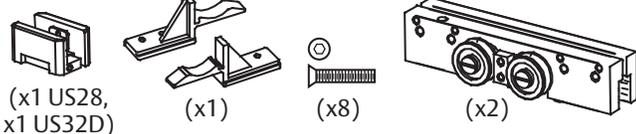

ASSEMBLY TO WALL

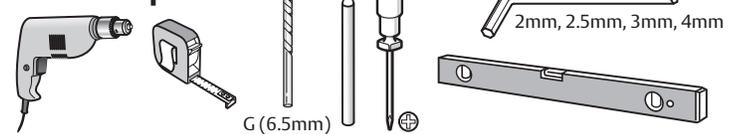

ASSEMBLY TO CEILING

Parts:

Tools Required:

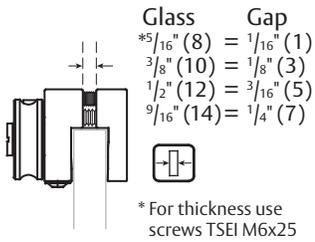

*Dimension shown: inches (mm)

Please refer to Glass Manufacturers' guidelines for cleaning glass. In addition, please refer to the National Glass Association (NGA) document FB01-00 (2020), Proper Procedures for Cleaning Architectural Glass Products, for more recommendations.

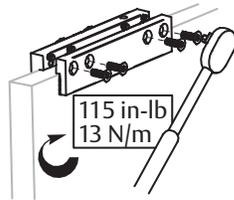

1 Assemble Clamps.

a: Turn set screws to achieve required gap.

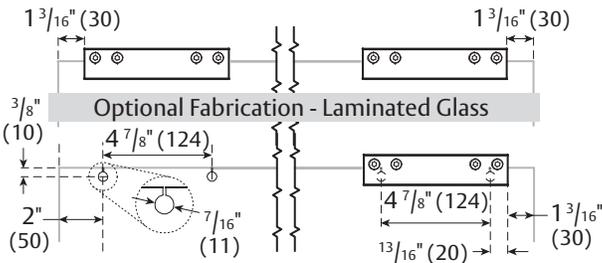

Ensure glass is fully seated in roller clamp

b: Torque roller clamp screws as shown below.

c: Recommended roller clamp location.

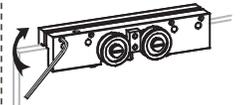

Note: For Optional Fabrication Glass Bushings and Pins are required (Provided by others)

Pin - Stainless Steel O.D. $3/16"$ (6)

Length: Glass Thickness + $5/16"$ (8)

Note: See SGS Soft Close instructions if using soft close.

d: Ensure all set screws are tight.

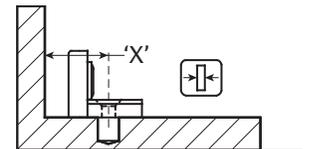

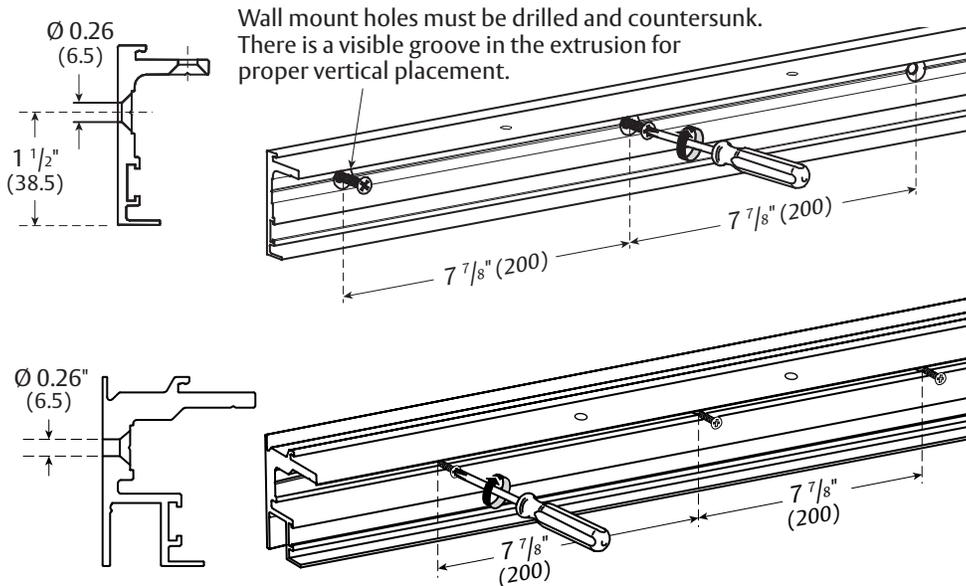

2 Mount Track.

Ensure that the track is level and plumb during installation.

Fasteners provided by others. If there are questions on what fasteners are to be used, consult a structural engineer.

WARNING: Must be installed into blocking. If you have any questions about what type of blocking is required, consult a structural engineer.

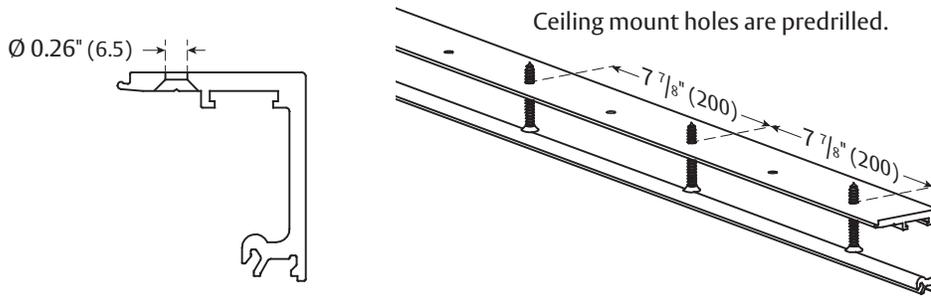

2a: Wall Mount.

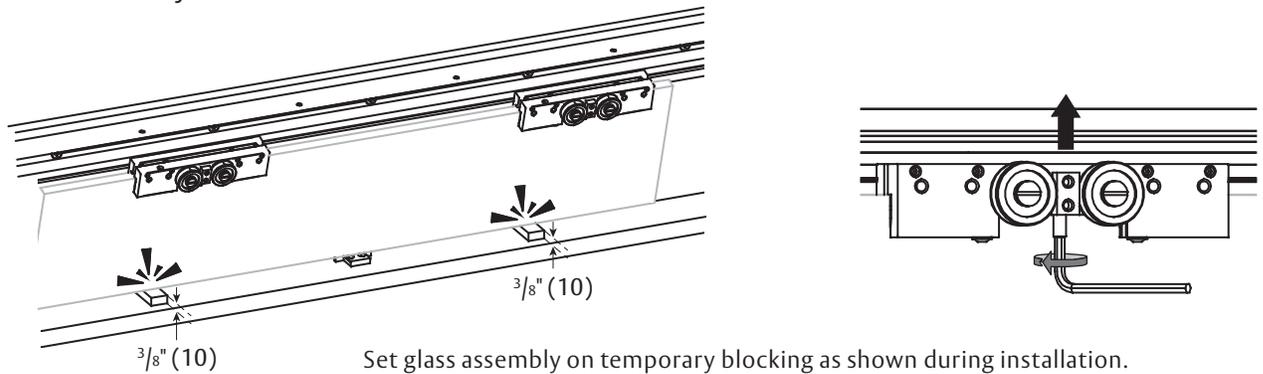

Glass	Distance 'X'
$5/16"$ (8)	$13/16"$ (20)
$3/8"$ (10)	$7/8"$ (22)
$1/2"$ (12)	$15/16"$ (24)
$9/16"$ (14)	$1"$ (26)

4 Attach Outer Track.

a: Insert and tighten accessible track fasteners.

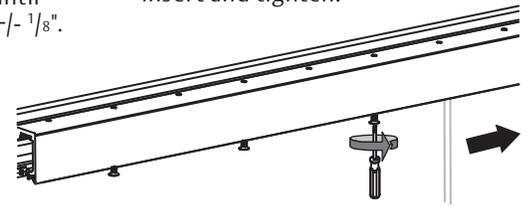

b: Tighten roller wheel set screw until temporary blocking can be removed.

Adjust roller wheel set screw until bottom door gap is set to $\frac{3}{8}'' \pm \frac{1}{8}''$.

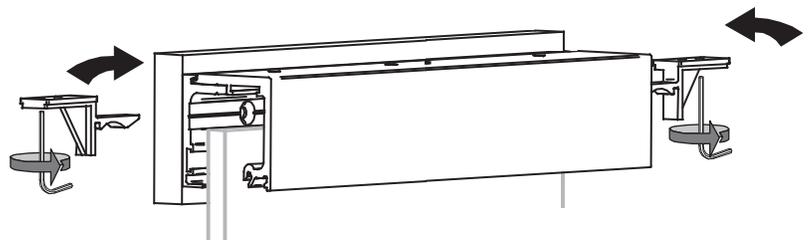

c: Slide door to access remaining track fasteners. Insert and tighten.

5 Attach End Stops.

Slide door to fully opened and fully closed positions to locate end stops.

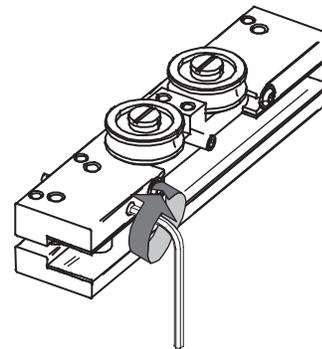

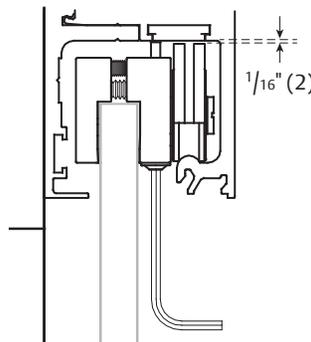

Once positions are set, tighten end stop set screws.

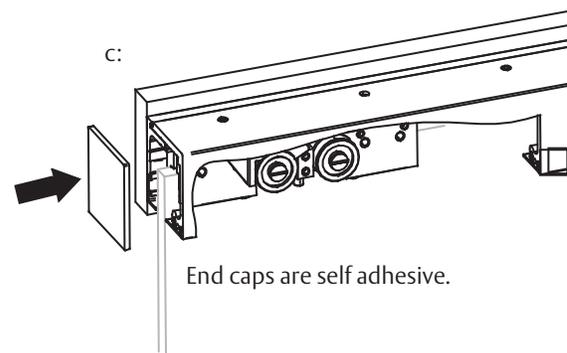

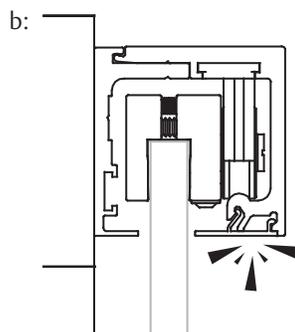

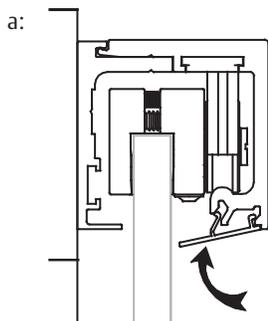

6 Adjust Anti Jump Screw.

Tighten anti jump screw until it contacts track.

Loosen anti jump screw 2 full turns to set proper gap.

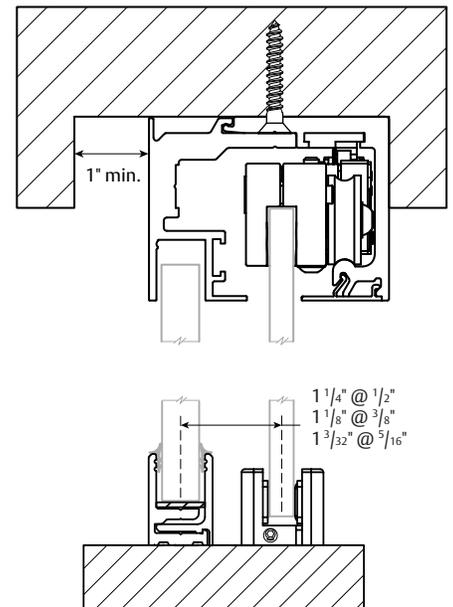

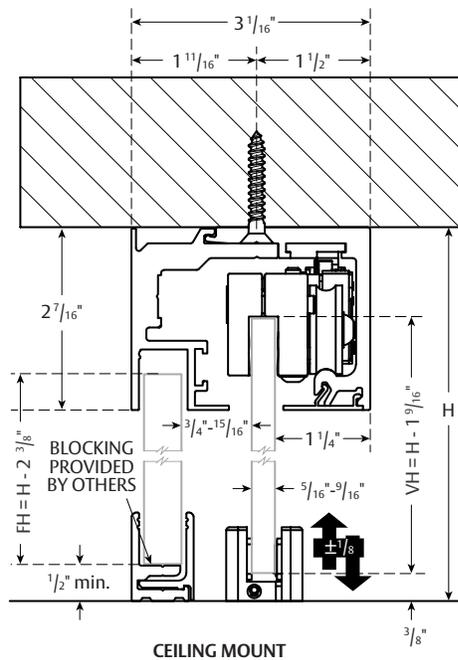

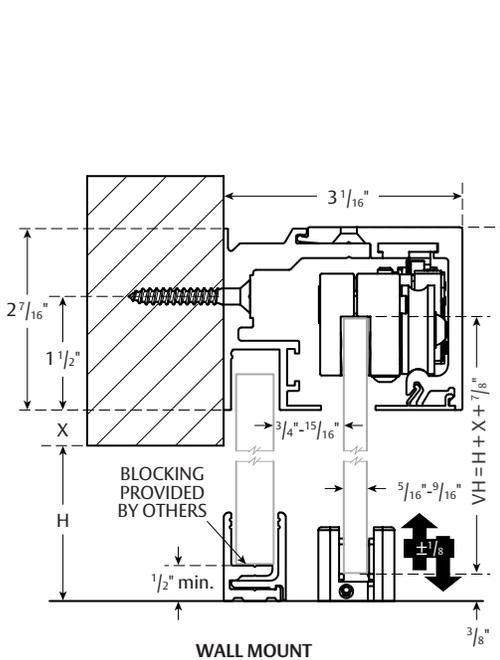

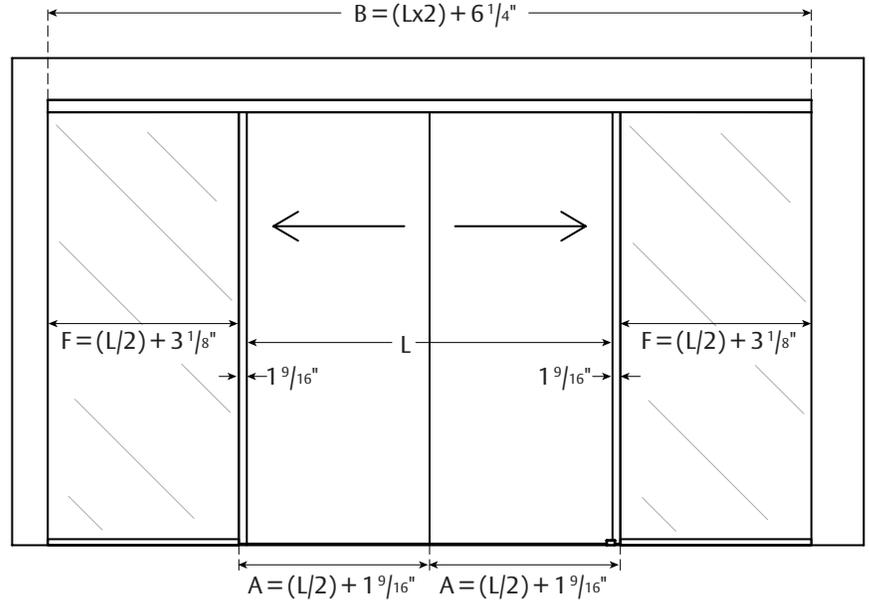

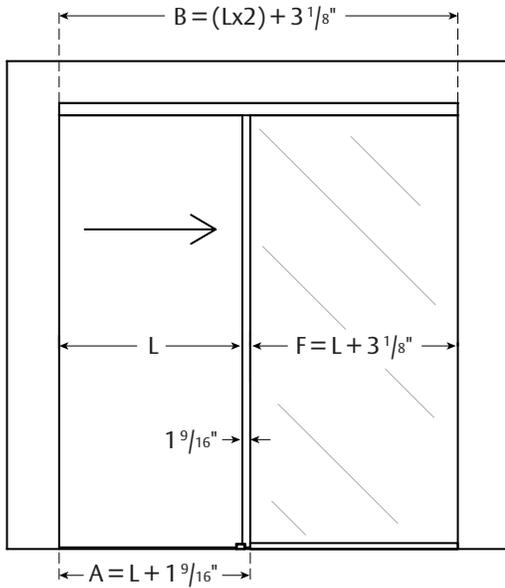

7 Attach Finishing Trim.
