

## Latch Extension Assembly For 3-3/4" and 5" Backsets

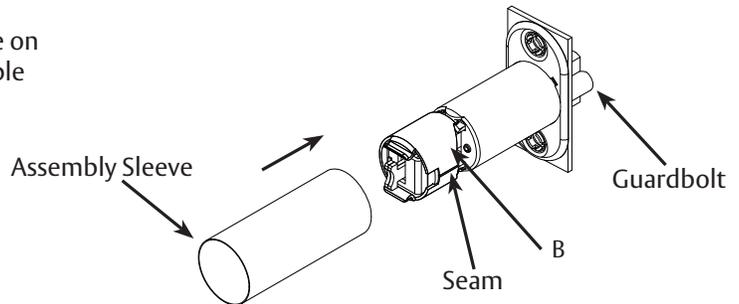

### Used with Cylindrical Locks

For proper installation, it is very important to assemble the latch extension on the latch in the position shown.

1. Insert yoke assembly into extension housing so that the yoke fork "A" faces the seam and cutaway "B" as shown. This orientation is critical for proper operation. This completes the extension assembly.
2. Assemble extension assembly to latch. Ensure extension ears "C" engage with latch ears "D", and simultaneously the yoke fork "A" engages latch tail "E".

3. After assembly, the seam and cutaway "B" needs to be on the same side as deadlocking guardbolt. Then assemble sleeve to hold both latch and latch extension.

4. Test the deadlocking of the latch: Press and hold guardbolt. Latchbolt must block, if pressed. Test the retraction of the latch by pressing the guardbolt and pulling on tailpiece "F".
