Key Features

PED4000 Series

Eliminated Catch Points

The design for the interaction of the pushbar and rail carrier is significant. Creating a flush profile increases safety by reducing catch points from bags/straps and increasing mobility for firehoses. The elimination of catch points also extends the life of the exit device with reduced maintenance and parts replacement.

Center Case Adjustability

This feature eliminates the challenges and time needed to adjust latch engagement on vertical rod devices. The PED4000 Series includes the capability to make adjustments up to 5/8" while the door is hung in place, using only an allen wrench.

Wire Routing

Wires for all electromechanical function options (D, MELR, VLR, M91, M93, M97 and EcoFlex trim) are contained within the carrier of the PED4000 Series exit device, eliminating the need for cavities in doors to be drilled. This makes installation and upgrades easier and faster.

Key Features

PED4000 Series

EcoFlex® Technology

Corbin Russwin EcoFlex trim reduces energy consumption, which lowers operating costs and reduces the number of power supplies required.

- Field configurable to fail-safe or fail-secure, and operates from 12-24VDC, offering greater flexibility in system design

- Superior reliability through higher performance and reduced maintenance
- Longer cable runs without negatively impacting lock function
- Reduced risk of voltage drops and eliminates inductive kickback
- Lowers the total cost of ownership

Status Indicators

The PED4000 Series includes three status indicator options to provide peace of mind for occupant safety and security.

- The Active Dogging Indicator displayed in the pushpad for visual confirmation if the door is secure.
- Our M48 Passive Dogging option with a subtle display on the side of the pushpad.

M48 Passive Dogging Indicator

Active Dogging Indicator

Aesthetics

Complement the look of the entire opening with door closer covers, specifically designed to match the exit device design. These covers are available on all DC8000 Series door closers.

Trim and Pulls

These trims are thrubolted, creating perfect alignment of center case, thumbpiece and cylinder, as required. Thrubolts pass through the chassis of the devices and are bolted directly to the trim. T33, T34, T36, T37 pulls are used with PED4247(A) only, they are identical to T33M, T34M, T36M, T37M pulls except the cylinder hole is located 3/8" (9mm) lower. The T3301 plate is a flat plate which can be used to cover existing door preps and is an ANSI/BHMA function 01. All trim and pulls are ADA compliant, except thumbpiece functions.

M97 Electric Dogging

Libraries, auditoriums, theaters, courtrooms, churches and schools benefit from the convenience of electric dogging (unlocking). When the exit device is energized and the push rail is depressed, it will continuously hold the push rail down and the latch(es) will be held retracted.

When the device is de-energized or power is interrupted, the latch(es) will extend. This feature is ideal for areas that require the silent operation of exit device hardware.

Features

- Wires are routed thru the rail (See page 4 for more details)
- Provides quiet ingress and egress when dogged
- Standard electric hinge - no special power transfer required
- Manual hex key dogging provided on non-fire-rated devices
- UL Listed for Panic and Fire (A)
- Holding force 70 lbs. min.
- Power Requirements: 24VDC regulated/filtered power supply
- Current draw: 0.2 Amp
- Available for all door widths

PED4000 Series

MELR Electric Latch Retraction

The Electric Latch Retraction exit device option (MELR) is the perfect choice for high traffic entrance and exit doors that require remote unlocking or remote dogging. It utilizes a latch retraction motor ensuring quiet operation which is ideal for locations such as conference rooms, theaters and libraries. Once retracted, the door functions in a push/pull manner. The MELR allows the exit device to be dogged for momentary ingress and egress and is commonly used in conjunction with an automatic door operator. The device can even be dogged continuously on fire-rated devices that are tied into the building's fire detection system.

Key Features

- 5 year warranty
- Field serviceable -modular design
- Motor driven latch retraction for smooth, precise operation
- Amount of rail retraction is automatically controlled by the MELR circuitry; System actively monitors its position and adjusts itself
- Digital retraction timer (0-20 seconds; factory setting is 5 seconds)
- Non-contact Request-to-Exit (M92) switch available
- Standard electric hinge - no special power transfer required
- Wires are routed thru the rail (See page 4 for more details)
- Can be used for continuous and intermittent use

VLR Latch Retraction Override

The VLR option provides a robust lockdown solution for high-occupancy areas, ensuring both security and free egress in emergencies. VLR provides for a manual override of motorized electric latch retraction, offering enhanced security during critical situations.

- VLR allows for immediate manual lockdown by overriding the latch retraction, ensuring that the door is secure from unauthorized entry while maintaining free egress.
- Equipped with easy-to-read visual indicators, the device shows a red, backlit, 'secure' window when locked, providing instant feedback to occupants and first responders.
- Lockdown can be activated with a simple turn of the key or thumb turn, overriding the latch retraction mechanism to secure the door.
- Minimum Door Widths:
 - Wide Stile Door 30"
 - Narrow Stile Door 30"

Note: Rings and Collars will be required for proper operation for cylinders other than the standard 6P

Note: Must be ordered with the MELR option

Electrical Options (cont.)

PED4000 Series

D Self Contained Delayed Egress

The Delayed Egress option sounds an alarm within the rail when the exit device push pad is pressed down, in order to alert personnel that someone is attempting to exit. The exit device is preset to remain locked for 15 seconds (field adjustable to 5, 10, 20 or 40 seconds), allowing time for authorized personnel to respond. This can be done by inserting a key into the cylinder on the rail or via a remote location. When the connected fire alarm system is activated, the exit device disarms and allows immediate egress.
